

India financials: In for the long haul

Expect more re-rating and importantly, an earnings revival in FY16F

We resume coverage on India financials with a sanguine view. The new government's decisive mandate under Prime Minister Modi should help address key asset quality concerns. A large part of the stress in non-infrastructure corporate exposure has been recognised already and a faster, more decisive policy framework should help restart stalled infrastructure projects. While hopes of reforms have been priced in over the last six months, we expect earnings upgrades and a compounding cycle to provide more upside.

Axis and ICICI are our top picks: their granular balance sheets and higher profitability should drive multiples higher as asset quality concerns ease. Our other preferred names are HDFCB and BOB.

Key analysis in this report includes:

- Detailed study of the corporate credit cycle infra and non-infra assets.
- Earnings drivers over the next two to three years.
- Company reports for 16 stocks on which we either resume or initiate coverage.

EQUITY: FINANCIALS

In for the long haul

Expect more re-rating and importantly, an earnings revival in FY16F

Action: Expect a gradual recovery; Axis/ICICI are our top picks

We resume coverage on India financials with a sanguine view as a historic mandate to the NDA should lead to positive outcomes on the macros. While FY15F earnings trajectory is still likely to be challenged, we expect stability in asset quality in the next two quarters and a strong earnings rebound from FY16F (+20% CAGR over FY16/17F). Our top picks are names where we still see scope for material mean reversion in valuations over the next 2-3 years as concerns on asset quality ebb (Axis/ICICI/BOB) and names where earnings is structural and leveraged to an upswing (HDFCB). NBFCs have not been that challenged on asset quality (except CVs) but current valuations are largely not enticing enough to play for uncertain and back-ended rate cuts, in our view.

Catalyst: Gradual credit cycle recovery and consequent earnings pick-up

- What drives our comfort on asset quality: (1) On the non-infrastructure corporate book, ~60% of stressed assets are from 5-6 sectors where weaker companies have been recognised as stressed (15-20% sector exposure is NPA/restructured) and we see lower incremental stress. (2) On the infrastructure book, most issues seem addressable in a time-sensitive manner by a pro-growth administration except for pockets like gas power we expect system delinquencies to come off to 2.3% from +4% in the next 2-3 years; however, the credit recovery may take longer than in the previous cycle, given issues with long gestation assets in this cycle.
- Earnings cycle: We expect sector earnings growth to pick up from ~7% in FY13/14 to +20% in FY16F. While private banks should continue their secular earnings growth, certainty of EPS growth for Axis/ICICI will increase considerably, in our view. PSU banks' PAT is likely to double in the next three years but ROEs in a few cases will likely remain below cost of equity (CoE). We prefer PSUs where ROEs would revert to above CoEs (SBI/BOB).

Valuations: Big mean reversion behind, some more to go

(1) Axis/ICICI's valuations are ~15-20% off vs. their FY04-07 levels – growth will be slower than in the previous cycle but a more granular balance sheet and higher RORWAs imply higher multiples as credit concerns ease; (2) retail banks have only just got re-rated and hence returns are likely to mirror earnings growth (~20% CAGR for 3 years); (3) PSUs' valuations are now off by only ~20-30% vs. FY04-07 multiples; ROEs are likely to be lower structurally even factoring in a recovery so comparison to peak multiples is unjustified – we prefer better underwriters (BOB).

Fig. 1: India financials: Our top picks

Expect further re-rating in Axis/ICICI/BOB; HDFCB is our preferred defensive for earnings compounding

Global Markets Research

8 July 2014

Anchor themes

Reforms by the new government will drive asset quality improvement over the next 2-3 years. Axis and ICICI are best leveraged to an upcycle and we expect further re-rating as credit concerns ease.

Nomura vs consensus

Our FY15/16F earnings estimates are largely in line with consensus. The certainty of our earnings estimates for corporate banks has increased.

Fig. 17: PSU banks - ROEs at 13-15% likely to be lower than 17-18% in the previous cycle and hence benchmarking valuations to the previous cycle may not be the right comparison

Valuation band should be lower than 04-07 valuations as ROEs was 17-18% then v/s 13-15% expected in FY16/17F for our coverage PSUs

Source: Bloomberg, company data, Nomura estimates

Executive summary

India financials have mean-reverted meaningfully in the last nine months, firstly driven by stability in the currency, followed by increasing conviction on an NDA government assuming charge and finally the positive surprise of a complete majority for the BJP on its own. While hopes of quick reforms have been priced into India financials, we believe there are pockets of opportunities where valuations will mean-revert further as asset quality concerns ebb but larger upsides will be made over the next 2-3 years in earnings upgrades/compounding. We thus resume coverage on India financials with a sanguine view.

Different risks and hence different drivers for each of the sub-segments: We have summarised the 2 key themes on the cover page: (1) corporate credit cycle recovery and (2) earnings revival. As risks and growth drivers are very different for each of the sub-segments in India financials, we summarise our outlook for each of the segments separately below (private corporate banks, private retail banks, PSU banks and NBFCs).

Private corporate banks - Prefer Axis/ICICI - Our top picks

- Axis/ICICI's underwriting was much superior on the non-infra corporate book than PSUs and our detailed analysis on large infra SPVs (special purpose vehicles) indicates that Axis/ICICI's exposure was low to infra sub-segments where LGD (loss given default) could be higher.
- Our key highlight for both Axis and ICICI is that they significantly improved the
 granularity in their balance sheets in the last 4-5 years, especially on liabilities, leading
 to an improvement in quality of earnings (lower volatility) and quantity as well (ROAs up
 from 1.2% in FY06-07 to 1.8% currently) we thus believe that Axis/ICICI could
 trade in line or at higher multiples than in the previous cycle as credit concerns
 ease.
- Yes Bank is more leveraged to higher growth but as asset quality has not faltered there
 will not be a meaningful recovery either. Liabilities, though improving, remain inferior to
 peers and hence, at similar valuations, we prefer Axis/ICICI.

Private retail banks: HDFCB preferred

- Asset quality has only improved for retail banks in the last three years (ex- CVs) and hence risks remain to the downside over the long term. But all three retail banks under our coverage are well managed and remain earnings compounding plays (20% EPS growth over FY14-17F).
- HDFCB's profitability remains best in class as it continues to deliver on most underlying metrics (CASA share, RTGS share, asset quality) and its recent under-performance makes valuations relatively more attractive to us. We prefer HDFCB among retail banks as its valuation gap is down to 10-20% vs. peers.

PSU banks: Prefer SBI/BOB, avoid PNB

- We expect a meaningful rebound in earnings for PSU banks over FY14-17F driven largely by asset quality improvement and related improvement in margins. While PAT growth will likely be strong, we expect ROEs for PSU banks to at best touch cost of equity (CoE) as: (1) incremental growth will be less profitable; (2) leverage ability will be significantly lower than in the previous cycle; and (3) structurally they will continue to lose CASA and fee market share.
- We thus prefer corporate private banks over PSU banks within PSUs, we prefer BOB and SBI. BOB's normalised ROEs look the best and the chairman transition risks seem overplayed to us. Our Buy on SBI is driven by our expectation of mean reversion in asset quality issues and a leap of faith on delivery by the current chairman.
- We avoid banks where credit underwriting was weakest in the previous cycle (PNB).
- Among capital starved banks, Union's recent outperformance already factors in a strong recovery, in our view. While BOI's valuations look reasonable still, we will be more comfortable if management slows down on growth.

NBFCs: Mixed bag + valuations not enticing enough

• HFCs' (HDFC/LICHF) growth outlook remains robust. Though we are concerned about competition on mortgages, our benign liquidity outlook over the near-to- medium term addresses spread concerns for HFCs – we thus like LICHF on a tactical basis.

Structurally we prefer HDFCB over HDFC Limited.

- Auto Financiers (SHTF/MMFS) are seeing a cyclical downcycle and monsoon risks
 could delay the recovery process. Capex cycle improvement will have a larger impact
 on SHTF but current valuations price in the improvement, in our view. MMFS remains a
 structural rural story but monsoon risk is not fully priced in, in our view.
- **IDFC** could have been the most obvious beneficiary of this recovery but for its large gas exposure and long-gestation banking foray.

Asset quality: Gradual but steady improvement expected

Economic recovery to aid asset quality – incremental stress accretion to come off from 2H15F and we see material improvement in FY16/17F

The asset quality of India's banks, especially PSUs, have deteriorated over the last four years with a significant contraction in GDP/IIP growth with total stressed assets reaching ~10% of system loans in FY14 with ~4% accretion of bad loans in each of the last three years. Our economic team expects GDP growth rate to improve to ~6-6.5% with meaningful improvement from 2HFY15F. Over the next three years, we forecast NPAs plus restructuring to come down to 7% each by FY17F with incremental accretion coming off to ~2% annual delinquency rate from 4% currently.

What drives our turnaround expectations: 1) Ex-infra, five to six sectors contribute ~60% of the bad loans where already ~15% of the sector loans (inferior business models) have been recognised as NPA/restructured and incremental debt servicing trends for these sectors are stabilizing and hence we are more sanguine on incremental stress accretion on these sectors. 2) On infra, while risks in gas power are likely to continue and the central government will likely have little say in tariff reforms, faster environment/forest clearances, faster decisions on tariff pass through/premium rescheduling, better coal availability and improved ability of developers to de-leverage (asset sales and equity raising) are clear near to medium-term positives expected from the new government.

Quantum and pace of recovery vs last cycle: Corporate health (leverage, interest coverage) is similar to the last cycle, in our view. Based on our observations, the difference in this credit cycle v/s last cycle is that the asset quality issues are in sectors with longer gestation unlike the last cycle (commodity linked) and hence recovery should take a bit longer. Also, treasury income buoyancy is likely to be 10-15% of the last cycle and hence the ability of PSU banks to write off bad loans should be lower and hence credit costs reductions are likely to be more gradual.

Fig. 19: Asset quality - comparison to the last credit cycle- We expect a steady but gradual improvement

Source: RBI, Bloomberg, Nomura estimates

What gives us a comfort of an improvement in Infra and non-Infra asset quality?

Fig. 20: Ex-Infra Asset quality - \sim 6-7 sectors contribute \sim 60% of corporate stress - we look for improvements in most of these sectors except for shipping/aviation (as of FY14)

Sector	Contribution to CDR referrals (ex- Infra)	% of SBI's Corporate NPA + Restructuring (ex Infra)	Trend of incremental stress	Comments
Iron and Steel	26%	18.3%	•	(1) We had seen significant deterioration in asset quality for medium and small metal/steel convertors - inferior business/ lack of backward integration/etc (2) But financials of most large metal players have held up well on debt servicing though profitability has moderated in last 2-3 yrs. (3) The smaller/weaker metal companies have already been recognised as NPAs (15-20% of PSU bank's metal exposure is recognised as NPA/restructured) and with large players still comfortable on debt servicing, incremental stress is likely to come off.
Textiles	12%	11.6%	•	 (1) Textiles especially spinning companies has recovered from FY 12 shock when cotton prices crashed 40-50% - Sector interest coverage ~2x now (2) Incrementally power situation has improved in Tamilnadu (textile belt in India) and overall competitiveness has improved with china with labour cost/exchange working in India's favour. (3) So largely we expect some improvement in textiles over next 1-2 yrs.
Telecom/ Towers	7%	N/A	•	 (1) Competitive dynamics amongst existing players likely to remain stable, w hich bodes w ell for incumbents. How ever, Reliance-Jio's entry next year remains a key risk. (2) Upcoming spectrum auctions shouldn't lead to strain on cashflow s – only ~30% of payments are to be made upfront, w hile the rest over a 10-year period. (3) Cashflows of larger telecom operators seem comfortable inspite of some inch up in competition expected.
Engineering/ Construction	6%	7.9%	•	 (1) Asset quality issues due to slow down in execution + large receivables from government + problems with BOT subsidiaries. Many of the large names already referred to the CDR - Gammon/IVRCL/HCC (2) We believe some of the receivables could get cleared easily and pick up in execution will further help these companies.
Hotels	3%	4.5%	•	(1) Banks have restructured some loans and have increased lending tenure from 5-7yrs to 10-12 yrs which is more alligned to the expected cash flows in the sector (2) Growth pick up will help occupancies but it will likely be a gradual recovery.
Shipping/Offshor e	10%	3.6%	A	(1) Challenges continue for shipping companies but fortunes here more alligned to global grow th - We see limited positives for shipping companies due to change in government.
Aviation	NA	N/A	A	(1) Challenges continue with players like Spicejet/Jet reporting record losses but induction of strategic partners is a saving grace.(2) Competition is only picking up and hence recovery will be difficult.
Total (ex-Infra)	64%	46%		Overall expect of Shipping/Aviation, we believe incremental stress in most sectors discussed above is likely to be lower.

Source: Nomura research

Fig. 21: Infra asset quality – Many issues relating to infra asset quality look solvable except for gas power

	Al-196 - Al-	
l	Ability of New government to	
Issues with Infra	deliver (Low or high impact/	Nomura Viou
Asset Quality Gas power assets	Near term or Longer term) No Impact	Nomura View (1) We are least optimistic on this Infra asset class. Running on imported LNG is not viable and there is limited visibility of signifcant increase in domestic gas production. (2) Fortunately, system exposure to gas is material for only a few banks/NBFCs - IDFC/IDBI
SEB Reforms	High Impact but Long term	(1) Tariff hike decisions is a state government subject but the central government will positively impact FRP implementation, ATC loss reduction, etc
Coal/Fuel availability	High Impact but Long term	 (1) While FSAs have been signed by Coal India, the government needs to sort out Infrastructure build up/Environment permissions which has been constraining coal production. (2) Environmental clearnaces for extra mining in existing mines could be a near term fix till the longer term issues are sorted out.
Tariff pass through for aggresively bid power plants	High impact and Near term (The UPA govt. had already set the ball rolling on this)	(1) Imported power plants (based on fixed bidding) have got a compensatory tariff hike (Tata/Adani). Though this is being contested by SEBs and would involve legal complications, on a long term basis we believe most coal assets including imported coal plants would produce power at economically viable power tariffs (relative to gas plants) and hence financial instituions will not need to take large haircuts.
		(2) The ideal solution could be re-bidding these project which will involve time-delays - Again there could be NPA hits in these cases in viable projects, banks will not loose too many cents to a dollar
Environmental/Fore st Clearances	High impact and Near to Medium term	 (1) This issue has impacted the whole Infra chain right from coal production to project execution and also in road projects. (2) We believe this is one of the areas where the new government can deliver on a near to medium term basis. (3) Fixed time bound accountability for ECs will help addressing a lot of the concerns relating to indecisiveness
Excess Leverage/Equity Raising	Near term impact	 (1) Asset sales have inched up in last 12mnts - With macro outlook improving, BUYers would be keen to close more transactions - Some groups like GMR/JPA/DLF have been more successful in selling down assets (2) Improved valuations of Infra companies in last 6mnts provides promoters an ideal opputunity to raise equity capital - Some groups like GMR/JPA have already raised equity through QIP.
Aggresively bid Road projects	Medium impact + Near to Medium Term	(1) Recently the government has allow ed premium rescheduling of stressed road projects (to be evaluated on case to case basis). Government could be liberal in granting reschedulling to more number of projects to reduce the stress for asset owners

Corporate credit cycle: Our expectations for the next three years

While PSU banks and corporate B/S linked private banks have discounted some turnaround in corporate credit cycle and asset quality but the quantum of improvement and timeline remains the key questions. While overall improvement in GDP growth and IIP should finally determine the quantum/pace of improvement, we look at: (1) quantum and pace of recovery in the last cycle and (2) Sectoral distribution of stressed assets in this cycle vs last.

Quantum and pace of recovery in the last cycle

Stressed asset accretion higher in last three years than last cycle: Gross NPA levels were structurally higher in the 90s at +15% of loans and hence comparing current stressed asset levels now vs 2000-03 and subsequent recovery cycle would not be right given the higher NPA base then. However, we think gross additional slippages and restructuring would be a correct comparison. In 2001-03, when GDP growth averaged 4.5%, gross slippage levels were ~3.5-4.0% for the system. On a weighted basis (40% weight for restructuring), stressed asset creation in the last three years have been mildly higher at ~4% of loans each year with 4.7% weighted stressed asset accretion for PSU banks and ~2% accretion for private banks.

Fig. 22: Stressed assets: this cycle vs last

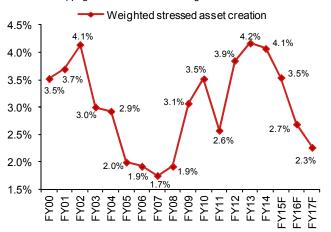

NPA % and restructured %

Note: We have considered 50% of restructured assets as stressed asset Source: RBI, Nomura estimates

Fig. 23: Accretion in the last three years has been slightly higher than the last cycle

Incremental slippages + 40% of restructuring

Note: We have considered 50% of restructured assets as stressed asset Source: RBI, Nomura estimates

Improvement from 2H15F but pace of recovery may be slower than last cycle:

Incremental stressed asset creation came off meaningfully in the second year of higher growth (FY05) in the last credit cycle with gross slippages coming off by ~50% from 4% in FY02-03 to ~2% slippages in FY05 making it a relatively quick asset quality recovery. In this cycle, we look for a moderation in stressed asset creation starting from 2HFY15F. The government has some low hanging fruits to deliver on but large part of the asset quality issues is long gestation sectors/projects and with regulatory dispensation for restructuring ending in FY15, we believe the recovery will be steady but a little more gradual. While restructuring is likely to ebb significantly from FY16F, gross NPA reduction make take a little longer (asset quality issues in long gestation assets, end of regulatory forbearance on restructuring, slippage risk from restructuring).

Fig. 24: Restructured loans to come off

As dispensation to non-infra restructuring end in FY15F

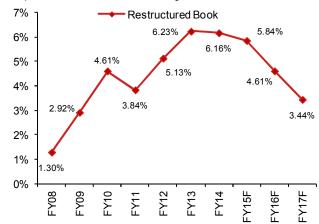

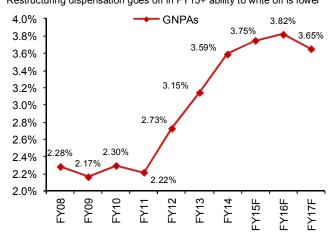

Fig. 25: Gross NPA reduction to be a little more gradual Restructuring dispensation goes off in FY15+ ability to write off is lower

Corporate health & distribution of stressed asset vs last cycle

• Corporate health equally weak vs last cycle: Our analysis indicates that corporate health is equally weak vs the last cycle with overall debt/equity higher than the peak in the last cycle and interest coverage almost now at similar levels.

• Stressed assets are of longer gestation in this cycle: The key difference in this cycle is that most assets that are stressed are long gestation assets unlike commodity industry-related stress in the last cycle which recovered as commodity prices recovered in FY02-04. Thus, while we expect improvement in asset quality from 2H15F the pace of improvements in gross NPAs is likely to be slower.

Fig. 32: Sectors with low interest coverage in FY98-02

Fig. 33: Sectors with low interest coverage in current cycle

Source: ACE equity, Nomura research

Source: ACE equity, Nomura research

However, some positives at the margin: The only heartening thing is that ex-Infra,
most of the weaker names in stressed sectors (eg, Iron and steel, textiles, Engineering)
have been recognized as NPA or restructured assets. As well, interest coverage,
though at low levels, is stabilizing, incremental restructuring is plateauing (lower CDR
references) and with expected improvement in macros, we expect an improvement in
asset quality to show up meaningfully from 2H15F.

Fig. 34: SBI's stress recognised high in a few sectors already Stress in a few large sectors already ~15-20% of SBI's sector exposure

Risks to asset quality

• Slippages from restructured book: In the last three-four years, ~3% of loans annually were restructured. Most restructured accounts enjoyed ~two years of principal moratorium and ~0.5/1 year of interest moratorium and hence their financial performance was not fully tested for interest servicing capabilities. We expect 5-6% of loans to come out of moratorium in next 2-2.5 years and our analysis suggests that +50% of these accounts currently face significant interest coverage challenges – PSUs are largely exposed to this risk.

- Large difficult gas power and international coal assets: In spite of our expectations of decisive policy-making from the new government, some large Infra assets funded are unlikely to have a viable solution. (1) Gas power assets: Luckily, only a few financial institutions (IDFC/IDBI) have material exposure to gas power assets; and (2) International coal assets funded: Griffin, Hancock, Bumi are some large overseas coal assets funded by Indian banks The economics of these coal assets look challenged as coal prices have come off since acquisition/funding and these could present some bulky challenges for the system. ICICI has been active in these assets.
- Monsoon impact on agriculture loans and potential moral hazards: The current monsoon has largely been a non-starter until now with current monsoon trends ~40% below historical trends. Apart from the direct impact to agri and rural loans, food inflation is likely to likely move up and delay the possible rate cut cycle. Direct impact is likely to be higher for PSU banks and NBFCs like MMFS. As well, Andhra Pradesh (southern Indian state) has been pushing for a debt waiver and a monsoon failure increase the likelihood of waivers in other states as well. Waivers in the past have impacted agri credit culture for 2-3 cropping seasons after a waiver.
- Beware of NPA management NPA sales and SBLC linked offshoring: Banks to some extent have managed NPAs by: (1) selling down NPAs: Most PSUs have sold down assets to ARCs and the trend is likely to increase in FY15F- The extent of sell-downs is higher for BOI among PSUs till FY14. IIB/Yes have also sold down assets but quantum of sales is relatively low. (2) SBLC linked offshoring: Some large corporate loans of PSU banks/ICICI have been re-financed based on Standby letter of comfort/guarantee issued by domestic bank. The positive aspect is that a recent RBI guideline has refused to allow this and incremental off-shoring based on domestic guarantees seem unlikely.

Earnings cycle: Material improvement from FY16F onwards

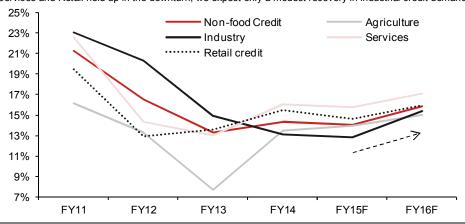

Credit demand has not crashed in this cycle; we look for a modest recovery in credit offtake

System loan growth has come off in the last two-three years from \sim 18% in FY09-12 to 13-14% in last 2-2.5 years but the slowdown in credit growth has not been as drastic as the fall in IIP/GDP growth. While industrial credit growth (including Infra) has fallen from \sim 23% y-y in FY09-11 to \sim 12-13% in FY14, overall credit growth held up due to relatively resilient credit demand in services and retail (both contribute \sim 42% of system credit and these segments grew by \sim 16% y-y in FY14).

With expectations of pick up in GDP/IIP we look for industrial credit growth to increase again from 2H15F (we estimate 12% industrial credit growth to move to ~15% in FY16F) and this is likely to drive overall credit growth from <14% to ~15.5% in FY16F. However, the gains as our numbers suggest are likely to remain modest due to:

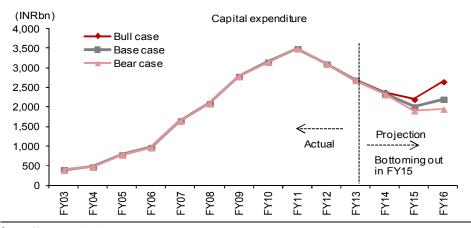

- 1. Some reforms are not credit-accretive, in our view: 1) releasing government payments (lower debtor days); 2) SEB reforms (lower working capital and transition financing for SEBs) and 3) execution of projects (lower capital WIP).
- 2. New capex announcement trend unlikely to rise anytime soon: More importantly, while initiatives by the new government are likely to revive activity in existing/stuck projects, the announcement of new capex is unlikely to scale up in a big way in the next 18 months and hence industrial capex-related credit off-take should only see a moderate uptick as mentioned above.

Fig. 41: Segmental credit growth expectations
Services and Retail held up in the downturn, we expect only a modest recovery in industrial credit demand

Retail credit growth: Retail credit offtake improved in FY14 from FY13 levels as banks refocused on mortgages (after two years of losing share in FY12-13). Steady growth should continue in mortgages as job losses have not been material and some correction in real estate prices along with improving macros could aid real estate volumes and mortgage growth. Auto credit offtake held up well until FY13 despite slow OEM numbers in the last two-three years due to increasing share of diesel cars/SUVs (higher ticket prices) but this trend has started to reverse in FY14; consequently, we have seen a fall in auto credit demand. With our Indian auto team looking for a pick-up in car demand in 2H15F and large rebound in CV volumes in FY16F, we expect non-mortgage retail credit demand to improve from 2H15F.

Fig. 45: OEM numbers to pick up from FY15/16F

Source: SIAM, Nomura estimates

Fig. 46: We expect non-mortgage retail credit growth to pick up accordingly

Source: RBI, Nomura estimates

How are banks positioned to grow?

- Private banks should continue to gain share as PSU banks will have to bear with capital constraints but in the recent past we have seen many PSUs growing aggressively despite significant capital constraints (BOI grew 28% y-y in FY14 with Tier-1 capital <7%). Most domestic private banks are well capitalised (including Yes bank now) and within our covered PSU banks, SBI/BOB are better placed vs BOI/Union, in our opinion.
- Among private banks, we believe Kotak/IIB are best leveraged to growth with Kotak historically running a switch-on-switch-off model for growth and IIB's growth expected to pick up with improvement in CVs in FY16F. Yes bank's capital raising addresses

capital constraints and hence it should start growing faster than the system now as corporate activity picks up.

- As we expect only a moderate improvement in Industrial credit demand, we look for ICICI's loan growth at 16-17% y-y in next two years and Axis at ~18% y-y.
- Among NBFCs/HFCs, Banks have inched up competition in mortgages but we expect HFCs to maintain share (vs increasing share in last three-four years). Shriram's AUM growth is likely to continue to remain muted over the next two-three quarters (<5-7% AUM growth) and we expect a pick up only after that. While MMFS remains a play on rural India, weak monsoons will likely impact disbursements in the near term.

Fig. 47: Our loan growth assumptions for banks/NBFCs in our coverage

Loan Growth y/y	FY14	FY15F	FY16F	FY17F		FY14	FY15F	FY16F	FY17F
ICICI	14.0%	15.0%	16.9%	17.9%	BOB	21.1%	14.0%	16.0%	17.0%
Axis	13.7%	16.0%	19.0%	20.0%	BOI	28.1%	13.0%	15.0%	16.0%
HDFCB	26.6%	18.0%	21.0%	22.0%	Union	12.3%	10.0%	13.9%	15.8%
Kotak	10.6%	14.8%	22.5%	24.1%	HDFC	15.9%	16.4%	18.4%	19.2%
IIB	25.3%	22.0%	24.0%	25.0%	LICHF	17.4%	16.9%	18.2%	19.2%
Yes	15.0%	16.9%	20.8%	20.5%	MMFS	23.2%	12.4%	21.7%	23.1%
SBI	15.7%	14.5%	16.0%	17.0%	STFC	17.2%	10.0%	17.0%	16.0%
PNB	14.7%	13.0%	15.9%	16.9%	IDFC	1.5%	5.0%	8.0%	10.0%

Margins: Private banks at best will likely hold on to high NIM levels, some revival in margins for PSUs, retail banks and NBFCs seem better placed for a falling rate cycle

On the macro factors relating to margins:

1) In our opinion real deposit rates have remained negative for a significantly long period of time (from Oct-08 onwards) and hence, despite our expectations of ample domestic liquidity (relating to foreign flows), we do not think that banks will move down on term deposit rates before they move on base rates.

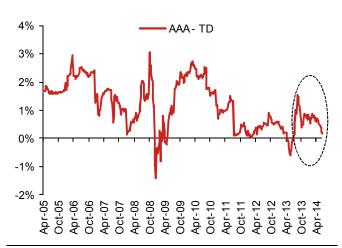

2) For wholesale funds dependent entities (Yes/IIB/NBFCs), rates have cooled and differential of wholesale money (<1 year certificate of deposit) to term deposits (TDs) are again very low with liquidity improving but we do not subscribe to assigning similar multiples to wholesale and retail funded businesses despite the lower rate differentials.

Fig. 48: Real deposit rates have been negative for too long Implying that banks cannot move on deposit rates very quickly

Source: Bloomberg, Nomura research

Fig. 49: Wholesale funds now similar priced to retail TD

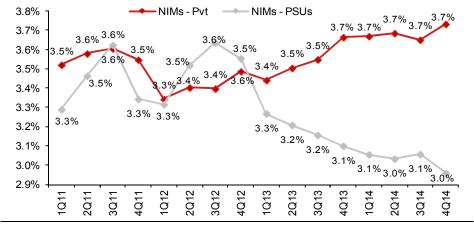

Source: Bloomberg, Nomura research

Within banks, margins have remained and would remain a story of contrasting halves

- While margins for private banks have improved by 20-30bps in the last two-three years, PSU bank margins have contracted by ~30-40bps.
- For private banks, margins held up and to some extent improved as LDRs inched up, CASA improved especially SA ratios and large private banks did not have any material NPA related interest reversals/drags. With LDRs peaking (at 77% from 73% about two-three years back) and business mix getting less risky (higher retail and move to more completed projects vs WIP projects), we see that margin levers have peaked largely for corporate private banks. The only respite in next 18 months could be pick up CA deposit growth but it is unlikely to move the cost of funds needle much Overall we look for margins to remain steady for corporate private banks.
- For PSU banks, the story has been reverse with increasing NPA levels, falling CASA and higher reversals hitting margins in last two-three years. As we expect slippages to plateau in 1H15F and come off there on, interest reversal impact is likely to be lower. From a loan growth mix perspective, retail and SME are current focus areas for most PSUs and while retail growth is likely to be NIM dilutive (mortgages largely), SME growth is likely to be NIM accretive in our view. We look for margins to tick up by 10-20bps for PSU banks especially for BOB/BOI/Union.
- For retail banks and retail NBFCs, there could be a tick up in margins when the rate cycle turns as large parts of their asset book will be fixed in nature and should reprice after liabilities. However, we do not recommend playing NBFCs as yet as valuations for most retail NBFCs are unattractive and timelines of a rate cut remain uncertain.

Fee growth outlook mixed: retail robust but corporate fees to see only moderate improvement; some treasury respite for PSU banks

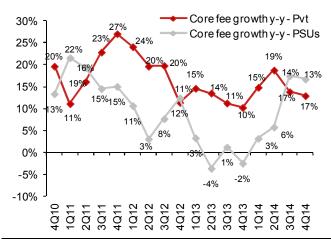

Fee growth has been weak in last two years: Core fee growth has lagged B/S growth for banks in general for the last two years and reported non-interest income has been inflated by non- core or recurring items (repatriation profit in the case of Axis, dividends in the case of ICICI, recoveries in the case of PSU banks). The slowdown has been a function of slower corporate fund and non-fund based fees, a large slowdown in volumes and cuts to commission rates in third-party distribution business and in government business for PSU banks.

Fig. 57: Core fees have lagged B/S growth in last two years Fee growth has lagged B/S growth for the system

Source: Company data, Nomura research

Fig. 58: Private banks have still done a better job

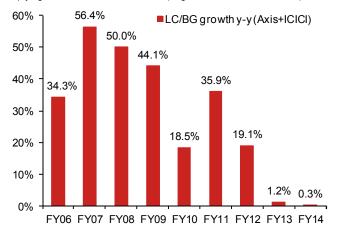

Source: Company data, Nomura research

Outlook on various fee streams:

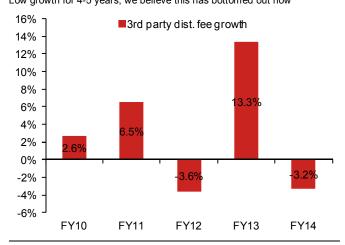

- Corporate capex fees: While we expect some tick up in industrial credit and related fees, large fee machines like project finance especially on the non-fund fees side are unlikely to revive materially as new capex announcements is not likely to rebound sharply.
- Third-party distribution fees: Both volumes and commission rates have been hit in the last two-three years, but with stability in insurance product structures now and pick up in capital markets, we believe third-party fees have bottomed out and we expect a pick up.
- Business banking, trade and CMS: This segment has held up well and we expect stable trends to continue. For smaller banks like IIB/Yes, success in this segment in the next two-three years should address issues on their bulky fees from corporate bonds/IB.
- Client FX: FX volatility has led to strong client FX revenues for most banks including PSUs and, with some stability, FX fees may be a near-term laggard.
- Retail asset and liability fees: Trends have largely been stable and we expect a similar trend to continue.

Fig. 59: LC/BG exposure of banks flat for last 2 years Implying lower non-fund based fees (large contributors in FY06-12)

Source: Company data, Nomura research

Fig. 60: Third-party distribution fees for ICICI/HDFCB Low growth for 4-5 years; we believe this has bottomed out now

Source: Company data, Nomura research

Among our coverage universe

- ICICI has already seen normalisation in large corporate fees, hence we are seeing a
 pickup in overall fees for ICICI. This normalisation of large corporate fees is under way
 for Axis, hence fee growth is likely to improve for Axis in FY16F.
- **HDFCB's** fees have been muted due to slow capital markets and very weak third-party fees and we are likely to see a revival from here on.
- Among the mid-sized private banks, **IIB's** fee growth has been high but looks more sustainable to us vs. **Yes bank** (retail FX, mid-sized debt IB has worked well for IIB).
- **For PSUs**, fees remain more aligned to B/S growth, hence we expect some pick up in FY16 as B/S growth should improve marginally.

Fig. 61: Core fee growth assumptions for banks under our coverage

Core fee growth y/y	FY14	FY15F	FY16F	FY17F		FY14	FY15F	FY16F	FY17F

How big will treasury be for PSU banks?

- G-Sec yields have moderated from Mar-14 levels. Our economist expects G-Sec yields to remain almost flat at 8.7% through FY16, but with the improvement in macros, the trajectory is likely to remain flat or marginally lower, hence PSU banks could benefit.
- While PSU banks have a sensitivity to lower bond yields, their sensitivity is down to one-tenth of what it was in the previous cycle (FY02-04), given lower treasury book and lower share of AFS book in that. In the previous recovery cycle, PSU banks made about 4-5% of loans as treasury profits between FY03-05, and that provided PSU banks the flexibility in their P&L to write off bad loans, which we believe is unlikely to recur in any comparable magnitude in this cycle.
- Among our covered PSU banks, we believe that PNB/Union are most sensitive to falling yields.
- Among private banks, Yes Bank has a large corporate bond book which was hedged through Mar-14 through SWAPs.

Union	233	2.86	2.47	28.6	8.6%

Operating cost: Private banks will continue to show flexibility; most PSUs better placed on pensions now

- Like margins, opex has also been a story of contrasting halves with private banks
 exhibiting significantly high flexibility in the past two years when revenue growth has
 slowed down, whereas PSU banks' opex has been hit by increasing provisions for
 wage settlements and much-needed provisioning on pensions.
- For private banks, our discussions with banks have indicated that private banks can continue with the austerity in overheads and staff expenses for two more quarters after which opex growth is likely to align with B/S growth. HDFCB/Axis has been more successful than ICICI in cutting opex growth in FY14, but ICICI has added significantly to employee strength and that will likely aid its opex growth in the next two years.
- For PSU banks, although not all pension provisioning is behind us, the pension provisioning run-rate in the P&L has increased to 3-5x in the past four years (from INR60K/employee/year to ~ INR0.3mn/employee/year), hence large negative surprises are unlikely for most PSUs. While pension provisioning at SBI/PNB/Union has been better than peers, BOB caught up on pension provisioning in FY14.

Fig. 65: Private banks have shown high flexibility in opex Led by the big 3 private banks (ICICI/Axis/HDFCB)

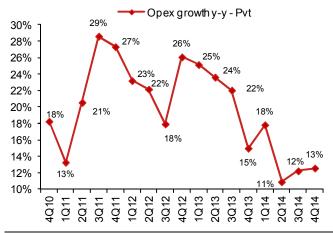

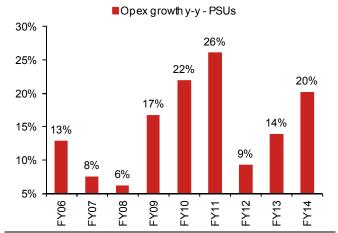

Fig. 66: PSUs have been constrained due to wages/pensions Overall opex growth was \sim 20% y-y in FY14

Credit costs/Provisioning - Relief likely from FY16F

• Incremental stress to be lower by 2H15 but gross NPAs unlikely to come off in a hurry: As discussed in detail in the "asset quality" section of this report, with the improving growth outlook and the expected pick up in capex execution, we believe incremental stress formation will peak in 1HFY15F and start coming off from 2HFY15F. Incremental stress asset formation is likely to come off from ~4% pa in the past three years to 2.7% in FY16F and 2.3% in FY17F. With recoveries and upgrades also expected to inch up, net NPA slippage levels should come off from 2% in FY12-14 to ~1% in FY16/17F. However, gross NPA levels are unlikely to fall as they did in the FY02-05 cycle given the ability of banks, especially PSUs, to write off bad loans is significantly lower (treasury gains unlike the previous cycle).

Fig. 69: Stress asset accretion to come off meaningfully from FY16...

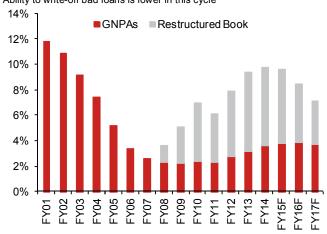

Gross NPA accretion +40% weighted restructuring

Source: RBI, Nomura estimates. 40% weight for incremental restructuring

Fig. 70: ... but PSU banks' gross NPAs should only marginally trend down

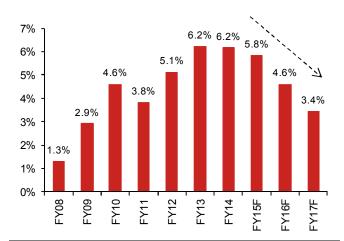

Ability to write-off bad loans is lower in this cycle

Source: RBI, Nomura estimates

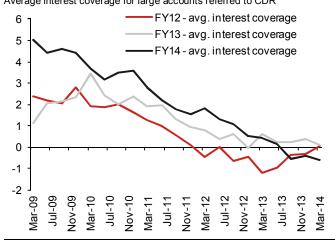

• Restructuring book is likely to come off sharply but slippage risks high: RBI's dispensation on restructuring is likely to come to an end in by FY15F, hence inflows into restructuring for PSU banks are likely to come off to <1%, from 3-4% annual restructuring seen in the past three years. While restructured book % is likely to come off as performing accounts get upgraded and the dispensation for restructuring ends in FY15F, our analysis still indicates that risk of slippages from the current restructured book is very high as these accounts complete their moratorium and are tested for their interest and principal payment capabilities.

Fig. 71: Restructured book to come off sharply

Fig. 72: However, slippage risk high from existing book Average interest coverage for large accounts referred to CDR

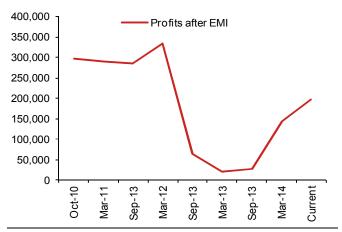

Source: ACE Equity, Nomura estimates

- SME and retail asset quality No worries yet, CVs to improve by FY16:
 - -SME and retail asset quality (ex CVs) have held up well in this credit cycle. Our interaction with credit bureaus still do not indicate any unhealthy origination of retail loans and no large-scale job losses indicates that the trend is likely to remain robust in the near to medium term.
 - -For CV/CEs, expected increases in utilisation (due to low capacity addition in the past two-three years) and some buoyancy in freight rates indicate some stabilisation but monsoon-related risks remain. In line with our expectation of improvement in CV sales in FY16, we look for CV asset quality to also recover meaningfully in FY16 and incremental stress could be lower from 2HFY15F.

Fig. 74: Leading to improvement in truckers' profitability

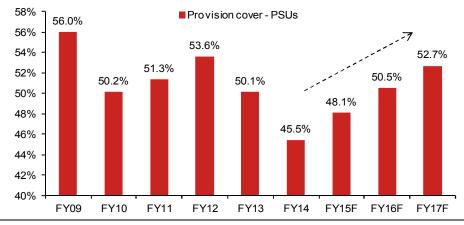

Source: IFTRT, Company data, Nomura estimates

- Source: IFTRT, Company data, Nomura estimates
- Seasoning and regulations should normalise come of the cyclical gains: As we expect net stressed asset accretion to come off by 50% in the next 2-3 years (from 4% net stressed asset accretion to ~2%), credit costs should also come off, but the fall in credit costs should be less drastic due to seasoning of NPA (higher NPA coverage) for PSU banks and potential imposition of counter-cyclical provisions that should impact private banks and NBFCs. While a slower fall in credit costs should impact profit growth, the fall in net stressed asset accretion is likely to remain the key driver for stock performance.
 - 1. For PSU banks, we expect NPAs to season as accretion of fresh NPAs is lower, hence we factor in NPA coverage to increase by 5-7% in the next two-three years.
 - For private banks and NBFCs: RBI has put some of the counter-cyclical improvement in macro measures, including: 1) dynamic provisions for banks; and
 180-day to 90-day NPA recognition for NBFCs could be implemented and this would likely increase accounting credit costs for banks/NBFCs.

Fig. 75: PSU banks - We expect an increase in NPA coverage by 5-7%

As the NPA book of PSU bank season - This would push up their adjusted books

Bank-wise asset quality and credit cost expectations:

- Corporate private banks: Asset quality performance at ICICI/Axis/Yes bank has held up better than investor expectations in spite of significant stress, we believe indicating superior underwriting. Our analysis on large corporate/infra SPV debt indicates that exposure of ICICI/Axis to sub-segments where LGD (loss given default) could be high is low (like gas power, unviable roads/ports). As well, we are seeing signs of some deleveraging, which should help their infra conglomerate exposure. Thus, we expect credit costs for ICICI/Axis to come off to ~75bps in FY16.
- **Retail private banks:** Asset quality has held up remarkably well and we expect the trend to continue. The only spoiler could be implementation of dynamic provisioning for which **HDFCB** is best placed given ~70bps of additional provisioning buffer that it has built. CV recovery is likely to aid credit costs for IIB (CVs contribute +20% of loans).
- PSUs: We look for credit costs to come off from ~140bps to 100bps in the next twothree years in spite of factoring in a 5-7% increase in NPA coverage. Our key concern for PSU banks is potential of high slippages from restructured book (as explained above).
- NBFCs: Shriram is likely to see an improvement in credit costs in FY16 due to
 expected revival in the CV cycle from 2HFY15F. For MMFS, we see a process of credit
 costs normalisation (moving up again) in FY15 over FY13/14 and this could negatively
 surprise if the monsoon disappoints further (already 40% below normal). IDFC's
 fortunes are linked to outcomes on gas power assets on which we remain negative.

Capital: private comfortable; some PSUs challenged but some comfortable as well

For PSU banks:

- From a capital perspective, a lot has been written about the shortage of capital for PSU banks. We estimate that PSU banks will require ~INR1.5tn of capital infusion assuming 14-15% growth and some pick up in profitability from here on. This is about 40% of current net worth and ~35% of current market cap of PSU banks.
- While the numbers look large, ~40% of the PSUs (including SBI/PNB/BOB) require just 20-25% of current net worth to be raised over the next four-five years, which we believe is manageable. The problem is the other 50-60% of PSUs which require ~60% of their FY14 net worth and ~75% of their market cap to be raised over the next four-five years.
- Within our coverage, Union and BOI require material dilutions as their current core
 equity tier-1 is <7%. In our models, we assume a phased dilution for all PSUs such that
 they are +9% Tier-1 by FY17 (comfortable from RBI's mandated BASEL- III Path). This
 requires ~40% dilution in the case of Union/BOI and <10% dilution in the case of
 PNB/BOB/SBI.

Fig. 77: Some PSUs comfortable on capital but for some, capital is a big challenge

We see no challenges for those marked in blue, minor challenge for those in white and significant challenges for those in red.

Source: Bloomberg, ACE Equity, Nomura estimates

Overall earnings growth: FY15F to be modest; FY16F could be large

Private banks: Expected to maintain high return ratios

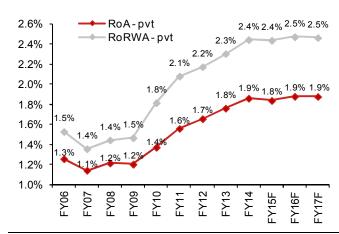

- ICICI and Axis: With NIMs and opex levers peaking out and B/S and fee income growth largely expected to improve in FY16F, we look for only <10-12% core PPOP growth for ICICI/Axis this year because some of the non-core earnings are unlikely to recur in the same magnitude as in FY14 (dividends, FX repatriation profits). However, post FY15, we look for earnings growth for ICICI/Axis to pick up with ~17% PAT growth for ICICI over FY16/17F and ~20% PAT growth for Axis.
- For defensives, PPOP growth has moderated in FY15F but continued low credit costs have aided PAT growth even in FY14. As we expect credit costs to remain low, PAT growth trends should remain steady.
- Return ratios have inched up; we expect them to sustain at high levels: In spite of the slowdown, profitability of private banks has improved with ROA expected to reach an all time high of 1.8% by FY16F vs. 1.3% in FY06-07 and 1.5-1.6% in FY10-11. While PPOP levers as we have mentioned earlier have peaked, credit costs should moderate in FY16F, hence we expect private banks to maintain their high return ratios.

PSU banks: Expect high profit growth but ROE in this cycle to remain under or at best in line with cost of equity

- No PAT growth in past five years: PSU banks in the past five years have not seen any PAT growth, largely owing to lower margins and more importantly higher NPAs/credit costs. As a result, return ratios for PSU banks have come down to 10-year lows of ~65bps ROA and 10.5% ROE.
- Expect 25% CAGR earnings growth in next three years: With some tick up expected in margins, primarily driven by lower interest reversals and a fall in credit costs (as recovery picks up), we estimate PSU banks to report PAT CAGRs of ~23-25% for the next three years, which is likely to lead to an improvement in return ratios but ROEs should remain lower or at best at par with cost of equity in spite of factoring in a strong recovery in earnings.
- ROE should remain sub-optimal:
- (1) Inherent leverage is likely to be lower in this cycle with BASEL III implementation (leverage should come off from +20x in the previous recovery or 18-19x in 2009-10 to ~15-16x in FY16/17F).
- (2) Infra contributed 20% of overall system growth between FY08-12. During origination, this product was very attractive with high yields and fees and very low opex and credit costs. We are unlikely to get such a highly profitable growth engine in the next two-three years. Retail credit, which is the current focus segment for PSUs, is not that profitable.
- (3) We are less concerned on pensions today given 3-4x increase in P&L pension provisioning over the past three-four years. However, in spite of that we think, the upside in terms of lower opex/assets was exhausted in the previous cycle as PSU banks will need to employ people and open more branches, hence opex/assets is unlikely to be a lever for profitability improvement.
- (4) Structural factors like losing fee income share + CASA market share continue.

NBFCs: It's going to be a mixed bag

In our view, earnings growth for NBFCs is going to be a mixed bag with HFCs (HDFC/LICHF) likely to report secular growth of 15-17% in earnings over the next two years, asset financiers (Shriram and MMFS) likely to see a recovery in earnings from FY16 onwards while, for IDFC, near-term profitability is likely to be challenged as it transforms into a bank

For HFCs: We factor in a stable funding environment as liquidity is expected to remain benign but increasing competition in mortgages will likely constrain margins. We look for stable ~15-17% PAT growth for LICHF and HDFC over the next two years. There is a possibility of an upside surprise in the case of LICHF if both liquidity and competition are benign in mortgages.

For Asset Financers: FY15 is likely to be a weak growth year both for Shriram and MMFS and hence earnings growth should remain muted. While for Shriram credit costs have peaked and we expect improvement from 2H1FY15, a weak monsoon could delay credit costs improvement in the case of MMFS.

Fig. 89: Earnings for NBFCs are going to be a mixed bag

How valuations compare now: Axis/ICICI are our top picks

Sector valuations have mean-reverted meaningfully – Pricing in a decent recovery Bank valuations had moved down from the end of Dec-10 to Sep-13, in line with the significant GDP growth slowdown, build-up in NPAs, elongated rate cycle and lastly exaggerated by BOP/CAD concerns (in mid CY13). However, valuations have mean-reverted quite significantly over the last 6-8 months, led first by easing BOP/CAD pressures, then by consensus expectations of a possibility of a NDA led government and lately due to an absolute majority to the BJP government.

In comparison, sector valuations are just about 15-20% lower than valuations seen at the beginning of the slowdown (end of FY11) when GDP growth levels were much higher (~7%) than current levels but decelerating. With economic growth currently ~200-300bps lower than end FY11 levels, stock prices are implying a meaningfully large improvement in overall growth levels and fundamental profitability improvement.

Fundamental performance and risks have played out very differently for different segments of India financials (corporate private, retail private, PSUs, NBFC) and we, hence, evaluate the way forward in each segment separately.

Fig. 90: Valuations are certainly pricing in a meaningful improvement

Private Corporate – Scope for more re-rating for Axis/ICICI

Better underwriting in the corporate book: Private banks such as ICICI and Axis had also built in large exposures to infrastructure-/capex-heavy industries over FY07-11 and the slowdown in corporate book has also been clearly visible for them as well in the last two years. However, their asset quality has held up well vs. street expectations, indicating better underwriting and, more importantly, they have managed their PPOP performance very well by diversifying more into retail, improving on liabilities and of late exhibiting significant opex flexibility.

Balance sheet much more granular: Admittedly, valuations for ICICI/Axis have meanreverted to ~1.8x (Mar-16F book), risks still remain on their mid corporate and infrastructure conglomerate exposure and growth is unlikely to revert to levels seen in the previous cycle. However, business models for ICICI/Axis have evolved since the previous cycle with: 1) liabilities much more granular now, 2) retail asset/fee mix improving for Axis, and 3) most importantly, RORWAs at peak levels leading to higher normalised ROEs than the last cycle.

Thus, we believe that there is more scope for re-rating in case of both Axis and ICICI, especially as and when some the asset quality concerns get addressed. Axis is higher on our pecking order due to (1) relatively better RORWAs, (2) better liability franchise (especially on CA) and (3) similar asset quality risks vs perception of higher risk.

Fig. 92: Valuations have mean-reverted for ICICI/Axis but still cheap in the historical context...

Valuations still ~15-20% lower than FY04-07 levels

Source: Company data, Nomura research Note: For ICICI Retail TD estimates are used for FY10-13

Valuations held up for defensives – Continue to remain a play on earnings growth

For most retail banks, valuations have held up well given that retail asset quality has surprised even the most optimistic expectations and no exposure to capex-/infrastructure-linked term lending aided asset quality. It is only in the last 18 months that CV growth and asset quality has faltered and of late there has been a slowdown in overall retail lending, which they have managed well through opex flexibility.

While there should not be recovery-linked credit costs upside, retail credit growth exmortgages will pick up as the overall recovery improves. Thus, for defensives, we are unlikely to see any re-rating of multiples and earnings growth should remain the key driver for stock performance. Most defensives scan out well on expected earnings growth for the next 2-3 years.

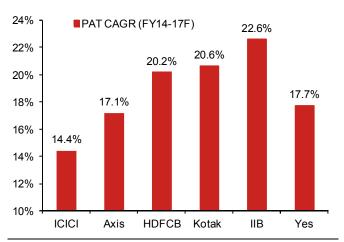

HDFCB preferred: We like HDFCB among defensives and its recent underperformance provides a unique opportunity. IIB does have its lumpiness in fees and its recent high corporate growth was not desirable, but improving macros will aid its CV book (+20% of loans) and credit risks from the recent hyper growth in corporate book will be lower in an upcycle, in our view. We see valuation constraints in case of Kotak and HDFC.

Fig. 95: Valuations have held up well for defensives Hence we do not see any re-rating

PSU banks – finding the right P/B for their new normalised ROEs

PSU banks valuations have suffered the most in the last three years driven by a spike in stressed assets to ~12% of loans and the consequent impact on margins/return ratios, compounded by BASEL III challenges and catch-up on pension provisioning. With credit costs reversing, we look for earnings to post a robust ~22% CAGR over the next three years but we have explained in detail in the previous section why normalised ROEs for PSU banks will be much inferior to what we have seen in previous cycles and, hence, investors should evaluate PSUs in the context of lower normalised ROEs.

Fig. 97: PSU banks' valuations vs return ratios and asset quality in last 15 years

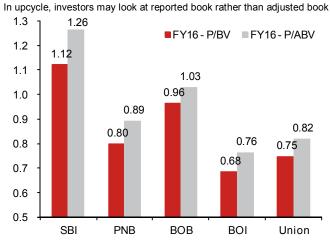

Source: Bloomberg, Company data, Nomura estimates

Some comfort from book adjustments going forward: In a downcycle, consensus has penalized PSU banks by adjusting their book value down for higher coverage on stressed assets and basing ROEs and multiples on reported book. We think the ideal valuation comparison should be on reported ROEs and unadjusted book (70% NPA coverage) or adjusted book (reported) and adjusted ROEs. Our adjusted book for PSU banks is ~10% lower and the adjustment is likely to come off as slippages abate into FY16F. Thus, we base our valuations on an average of adjusted and unadjusted book.

Fig. 98: Adjusted book vs reported book

Fig. 99: Valuations a tad better on reported book

Source: Nomura estimates

Within our PSU coverage:

- We see BOB, PNB and SBI generating ROEs which should be at par with their cost of equity. Among them, we like BOB and SBI.
- BOB's recent underperformance vs peers and superior underwriting drives our positive view as we believe transition risks to asset quality will be lower.
- For SBI, we expect a mean reversion of their asset quality with peers to play out in FY15F and admittedly we take a leap of faith on delivery of strong performance with the new chairman.

 PNB's underwriting has been the weakest and relapse risk from restructured book highest. After recent mean reversion in valuations with peers, we are negative on PNB.

- Of the two capital starved PSUs, Union's ~30% outperformance has brought back valuations to just 10-20% discount to BOB/PNB, which, in our view, is more than fair given the 200-250bp lower ROEs and lower capital levels. BOI's valuations seem reasonable to us but we are uncomfortable with management's growth focus in spite of low capital levels.
- We have factored in enough dilutions for PSU banks so that their tier-1 capital in FY17 is +9% the dilution is 10% or lower in case of BOB/PNB/SBI but ~40% in case of BOI/Union.

Fig. 100: RORWAs low for

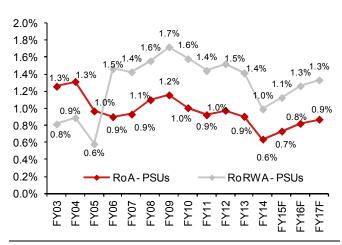

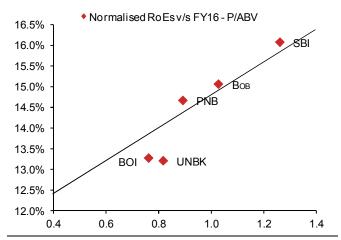

Fig. 101: PSU banks' normalised ROEs and current P/B

Source: Nomura estimates

Source: Company data and Nomura estimates

Top sector picks:

- Axis Bank (TP of INR2,300 19% upside): Axis Bank's business model has become
 less risky vs. the last upcycle as the bank continues to build significant granularity in its
 liabilities/assets and fees. While we believe asset quality concerns will only gradually
 reduce, our analysis of its large corporate/SPV exposure is comforting given the low
 exposure to sub-segments where the loss given default could be higher our
 preferred recovery play.
- ICICI Bank (TP of INR1,650 15% upside): ICICI's ROEs, over the past 2-3 years, have improved despite a slowdown driven primarily by NIM improvement. Though margins levers look exhausted now, we see opex levers playing out in the near-term and credit cost and leverage improvements should drive core ROEs (to 16-17%) over the next 2-3 years. ICICI finally seems to be delivering on business banking/CA business (historic weakness), and while asset quality concerns will only ebb gradually, our analysis of its large corporate/SPV exposures is comforting given ICICI's low exposure to sub-segments where LGD (loss given default) could be higher.
- HDFC Bank (TP of INR850 14% upside): Our positive view is driven by a mix of: (1) steady profitability with large floating provision cushion, (2) improvement on most underlying metrics, and (3) increasing and sector-best RORWAs/ROAs. In our view, the recent underperformance due to technical reasons provides a good entry opportunity.
- Bank of Baroda (TP of INR1025 17% upside): BOB's underwriting has been superior to peers in the last cycle and its delivery on CASA has also been better than peers. BOB is the most improved PSU bank and the recent under-performance on chairman transition related risks is factored in well.

Fig. 102: India financials – Our target multiples factor in longer term profitability and growth expectations – We could see more upsides for ICICI/Axis as our target multiple is lower than FY04-07 levels

Five underlying analysis that support our longer-term investment thesis

#1 Historical underwriting standards in large corporates/project finance:

With an expected improvement in macros and policy initiatives, some investors' concerns relating to infrastructure/large corporate exposures will partially get addressed in next two years, in our view. We use the last cycle data to map bank-wise exposure (source: Ministry of Corporate Affairs [MCA]) to risky SPVs/large and mid corporates to get a sense of underwriting standards of various banks and factor that into valuations.

Our analysis: We looked at +INR4trn of bank-wise SPV/corporate exposure (fund and non-fund based) to risky sectors such as power/roads/metros/commercial real estate (RE) and ex-infrastructure risky corporate names. Key highlights below: (Note: Please email us or ask your sales representative in case you would like to have an excel version of risky exposures of various corporates.)

- For ICICI and Axis, exposure to the above mentioned names is ~40% of their NW vs ~60% of NW for PSUs. More importantly, exposure to accounts with high loss given default is low for both ICICI and Axis. On a relative basis, risks for Axis and ICICI look pretty similar to us vs. perception of higher risk in the case of Axis.
- Retail banks' exposure to these segments is negligible (<10% of NW). Yes Bank's exposure (at ~30% of NW) is primarily to commercial RE where LGD (loss given default) will likely be lower.
- Among PSUs, PNB's book both in quality and quantity is the most risky (exposure is100% of NW to these accounts). All other PSUs under our coverage have almost similar exposure of 55-60% of their NW. Among them, SBI's book looks least risky to us with underwriting to better groups (in line with management guidance) and **BOB**'s book is most diversified (most exposures are <INR4bn).

We have done a bank wise analysis of INR4trn of stressed assets across power/ roads/ real estate and standalone corporates 160% ■Power - High Risk ■Power - Low Risk □ Risky corporates ■ Roads ■ Real Estate 140% 120% 100% 80% 60% 40%

#2 Who is gaining consistently on the liability side?

The latest phase of correction in India financials (July-13 to Sep-13) was related to an intended squeeze by the RBI to increase domestic rates and try to bring some stability in the rupee. This phase highlighted the importance of having granular deposits (CASA and retail TD) as valuations of wholesale funded entities (NBFCs and Yes/IIB) were significantly impacted. Though currently wholesale rates have eased in the last 6mnts and differential with retail term deposits is <50bps, we believe investors should value wholesale-funded banks accordingly.

Our analysis: We have looked at the quantum/composition of CASA mobilization in the last decade (2003-13), growth factors/drivers and market share patterns and qualitatively assess relative positioning of various banks/sub-groups based on their CASA SWOT. **Key highlights below:**

- 1. On current accounts (CA): (1) Private banks continue to gain share (35% share currently) contributing ~40% of incremental CA flow Interactions suggest that though CA products are available with PSUs, branch staff lack the drive to push for CA flows; (2) among private banks, HDFCB/Axis have been clear winners with ICICI lagging in the last 5-6 years but we see some improvement in CA growth for ICICI in the last 12-18 months as it is now focusing on branch banking as well; (3) Kotak/IIB/Yes have consistently gained share with IIB's CA performance being the best (4) Among PSUs, BOB's CA growth has been better while PNB/SBI have suffered.
- 2. On saving accounts (SA): (1) Private banks continue to gain share but the share drift is slower; (2) PSUs banks' growth in last 4-5 years almost matched that of private banks as rural SA growth was high with private banks having expanded their rural and semi-urban network to >50% of their branches, incremental SA share in rural India will be key to watch; (3) among large private banks, again Axis/HDFCB have done better than ICICI; (4) SA de-regulation continues to aid Kotak/IIB/Yes; (5) among PSUs, we have seen similar SA growth in the last 2-3 years for most PSUs SBI's superlative SA growth vs peers seems to have ended.

#3 Restructured book – Coming out of moratorium; real test of servicing in the next two years

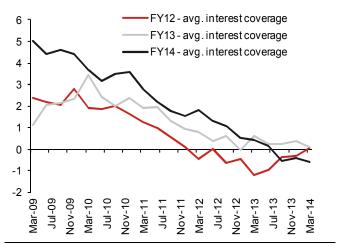

- In the last 3-4 years, of the 5.5% incremental stressed loan accretion annually, ~55-60% was restructured and 40-45% was reclassified as NPAs. Most of the restructured accounts did enjoy ~two years of principal moratorium and ~0.5/1 year of interest moratorium and hence their financial performance was not fully tested for interest servicing capabilities. We expect 5-6% of loans to come out of moratorium in the next 2-2.5 years with 2.5% of loans for private banks and 6-7% of loans for PSU banks.
- Our analysis: Our quarterly interest coverage analysis of the accounts restructured in
 the last 2-3 years indicates that >50% of companies still face interest coverage
 challenges. While an improving macro should lead to improvement in the financials of
 some of these restructured accounts, but some of these accounts should still face
 challenges and hence run the risk of getting downgraded. Hence, as restructuring ends
 in FY15, slippages could likely increase.
- PSU banks are most exposed as mentioned above Among PSU banks, PNB is worst
 placed with ~8% of loans restructured in last two years vs 4-5% of loans restructured in
 the same period for peers.

#4 Regulator has been counter-cyclical by relaxing or not implementing certain regulations –We expect implementation as economy improves

The RBI has pushed out certain regulations or not finalised certain draft guidelines of certain regulations in the last two years as these regulations would have further strained the P&L for banks/NBFCs. Our interactions with the regulators in the past suggest that these below mentioned regulations are certain to be implemented but the RBI will time the implementation based on improvement in financial performance of banks. Hence, some part of the improvement in core profitability of banks over the next 2-3 years could be impacted due to implementation of these guidelines. **Key regulations that could get implemented in the next two years:**

Fig. 111: Regulations announced that were put on the back-burner which could get implemented as the cycle recovers Some of this could be counter-cyclical in nature

Regulations	Announcements/Status	Possibility and impact of regulation	Banks/NBFCs impacted from our coverage universe
180 to 90 day NPAs for NBFCs	The Usha Thorat committee report on NBFCs in Sep-11 had recommeded this. In Dec-12, RBI had included moving to 90 day NPA recognition in a phased manner but this has not yet finalised given weak cycle	We believe this is likely to get implemented - Asset financiers like MMFS/SHTF will likely be hit more with ~200-300bps increase in NPAs - Ultimate credit costs will not change but there could be a spike in credit costs	For Shriram, NPAs could inch up by ~250ps and for MMFS NPAs could inch up by ~3-3.5% due to 90 day NPA recognition
Dynamic Provisioning	RBI had released a draft guidelines of dynamic provisioning in Mar-12 and RBI had mentioned in May-13 monetary policy that they will issue final	Again, due to a weak credit cycle, RBI had put dynamic provisioning on a back burner but as economy improves we expect this to be implemented. Though dynamic provisioning will help	Banks with low credit costs (mostly retail banks - HDFCB/IIB/Kotak) and some corporate/regional banks could be impacted more (Yes/ING) as their expected loss w ould be higher than actual credit costs.
	guidelines by Jun-13.		Some banks have inched up floating provisions in anticipation - HDFCB (85bps), Yes (40bps), Axis (30bps)
End of	RBI has decided to end the	After 9 mnts, banks will not be able to restructure without classifing an account as NPA.	PSU banks will be impacted more but given that the cycle is likely to improve the impact will be limited.
Restructuring in FY15	dispensation given to first time restructuring cases in FY15	Some w eak accounts w hich should have been classfied as NPAs aer currently standard as they have been restructured	As mentioned earlier, we are more worried on relapse risk of weak accounts that were restructured to push its NPA recognition
BASEL III phasing pushed out by 1 yr	In Mar-14, RBI pushed out BASE. III implementation by 1 year bringing the Indian implementation in sync with global BASE. Phasing due to challenges in capitalising PSUs	While this w as a w elcome relief as near term capital raising requirements w as cut dow n, but longer term capital raising quantum remains high in case of few banks	Within our coverage universe, we are not excessively worried on capital for

#5 PSU banks' pensions - Reasonably comfortable now

Pensions and provisions for wage settlements have increased opex growth for PSU banks at a time when growth and profitability has been weak leading to spike in cost-income. While pension assumptions are still sub-par and pension obligations calculations are under-reported, in our view, we believe a large part of the structural pain of higher P&L pension provisioning is in the numbers for PSU banks and we do not expect large negative surprise on opex growth due to pensions going forward.

How weak are pension assumptions?

Life expectancy assumptions: Most large PSU banks managements have indicated that they have migrated to the new LIC mortality table with life expectancy ~80 years from 75-76 years earlier and hence currently there would not be any shortfalls on this count. Within our coverage, only BOI has not migrated to the new table yet.

Wage inflation assumptions: Most PSU banks have increased this assumption to 5-6% from 4% earlier. While actual wage inflation would be ~8-9% for PSU banks, an increase in assumptions is a step in the right direction.

Discount rates: With rates expected to go lower in the next two years, there is likely to be some increase in pension liabilities as discount rates will get adjusted lower.

Why are we relatively comfortable with pensions now?

More than improving assumptions for pensions, the increase in P&L provisioning run-rate is encouraging. Pension provisioning for PSU banks in our coverage has increased by 3x in the last four years from INR35bn to INR105bn annually. This implies a pension provisioning of INR250K per employee vs <INR100K in FY10. This increase in pension provisioning is already in the cost base for PSU banks now and we do not see any reason for such a large disproportionate increase in pension provisioning going forward.

Within our coverage PSUs, SBI/PNB/Union are better placed on P&L run-rate vs BOB/BOI. BOB has substantially inched up pension provisioning in FY14 whereas BOI is yet to migrate to the new mortality table and pension costs may surprise negatively for BOI in FY15F.

NOMURA

Axis Bank AXBK.NS AXSB IN

EQUITY: BANKS

Business model gaps vs. peers bridged; valuation gap to close in as asset quality concerns ebb

Action: Transferring coverage with Buy (TP: INR2,300) - Top sector pick

Axis Bank's business model has become less risky vs. the last upcycle as the bank continues to build significant granularity in its liabilities/assets and fees. While we believe asset quality concerns will only gradually reduce, our analysis of its large corporate/SPV exposure is comforting given the low exposure to sub-segments where the loss given default could be higher – our preferred recovery play.

- Our analysis of +INR4trn of large corporate/Infra SPV exposures indicates that the asset quality risk is similar to that of ICICI vs. consensus analyst perception of higher risk.
- **Significant granularity in assets/fees**: The retail book now contributes ~40% of the incremental fees and the loan book is much more diversified.
- Underappreciated liability franchise: While the CASA success of Axis is
 well known, its CA dominance in business banking is still underappreciated. Also, the share of bulk term deposits is down from +40% in
 FY10 to <25% currently.
- Return ratios remain best in class with ROAs of ~1.7-1.8%. With an improvement in asset quality, we estimate +20% PAT growth in FY16/17F.

Catalysts: A reduction in stress asset accretion from 2HFY15F will drive further re-rating as investors will acknowledge the above fundamental improvements.

Valuations: Reasonable, in spite of the recent re-rating

Our TP of INR2,300 is based on 2.1x FY16F book. This is higher than the multiples at which Axis has traded in the past 2-3 years but lower than FY04-07 multiples. While growth over the next 2-3 years is likely to be lower than the last cycle, ROAs are much more superior currently at 1.75% vs. 1.2% in FY04-07) and B/S and P&L granularity makes the business model less risky.

Global Markets Research

8 July 2014

Rating From Suspended	Buy
Target price From N/A	INR 2300
Closing price 3 July 2014	INR 1926
Potential upside	+19.4%

Anchor themes

Granularity in B/S and revenue lines has increased significantly and further re-rating is likely as asset quality concerns ebb.

Nomura vs consensus

Our FY15/16F earnings are at par with consensus. Axis Bank could surprise positively on earnings if the asset quality turnaround is faster.

Asset quality risk manageable – Exposure to sub-segments with high LGD is low

Axis Bank's asset quality performance has surprised in the credit cycle with gross NPA of <1.5% of loans and slippage levels holding up at comparable levels of ICICI vs. consensus analyst perception of higher risk. In 1HFY15F, we expect slippages run-rate to track the bank's guidance of INR60-65bn of slippages + restructuring (for full-year FY15F) and come off from there on. We, thus, expect credit costs to remain stable at 1.05% in FY15F and come off to 95bps in FY16F and ~80bps in FY17F. **On specific segments:**

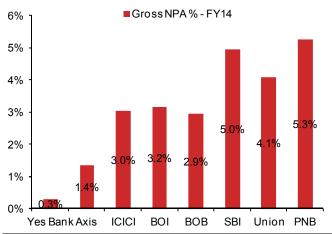

- Retail/agri/SME together contributes ~54% of the loan book and the asset quality
 outlook on business banking (SME) continues to remain robust with an improvement in
 the business sentiment. The retail book for Axis is lower risk with mortgages/LAP
 constituting ~72% of the book.
- On corporates/infra, our bank-wise analysis of +INR4trn of stressed infra/large corporate exposure shows that Axis's underwriting has been relatively better among project financiers and the exposure to segments that could see high loss given default is low (gas power/ unviable roads/ports). This, along with increasing floating provisions stock (~30bps of loans) and a turning credit cycle, is comforting, in our view.

Fig. 116: Axis's risk in large corporate/Infra is similar to that of ICICI – Exposure to subsegments with high LGD is low

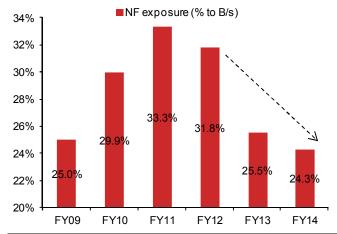

Source: Ministry of Corporate Affairs, Nomura estimates

Fig. 117: Asset quality has held up relatively well among corporate banks

Source: Company data, Nomura research

Fig. 118: Contingent liabilities now running down as well

Source: Company data, Nomura research

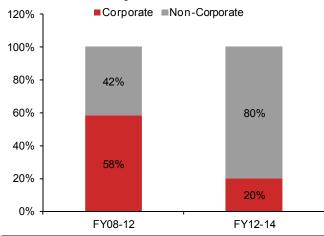

Significant granularity built in assets/fees

• From being a largely wholesale bank, Axis Bank's share of retail assets has increased to +30% in FY14 from <20% in FY11 and granular retail assets along with SME business contributed ~65% of the incremental growth in the past three years as the corporate book growth has slowed down. Currently, Axis Bank's asset mix is more granular than that of ICICI on a consolidated basis – we believe this makes Axis Bank's loan book less risky/cyclical than the last cycle.

Also, granularity has increased significantly in Axis Bank's fee business with retail fees
now contributing +30% of incremental fees. Even though Axis does not run a life
insurance business, it has scaled up its third-party distribution income with its tie-up
with Max New York – The bancassuarnce fees of Axis is now comparable with that of
ICICI/HDFCB vs. being 70-80% lower till FY10.

Fig. 122: Share of overall retail fees has increased

Source: Company data, Nomura research

Liability franchise remains underappreciated

- Axis Bank's CASA success is well known, but we believe that the bank's improvement
 on the liability side, especially on current accounts (CA), is under-appreciated. Also,
 bulk term deposits' share of Axis is down from +40% in FY10-11 to currently <25%,
 thus improving Axis Bank's ability to protect margins when rates spike.
- The highest incremental market share in the CA business: CA growth has suffered for the system in general in the past three-four years and so has it for Axis. But, given Axis Bank's dominance in branch banking (SME), its market share in the CA business has continuously increased and the incremental CA share of 9% over the past five years was best in class and significantly better than peer ICICI. Our interactions with liability heads at various banks suggest that the business banking dominance of Axis Bank remains unchanged.

Return ratios best in class now – Earnings growth to pick up in FY16F as credit costs moderate

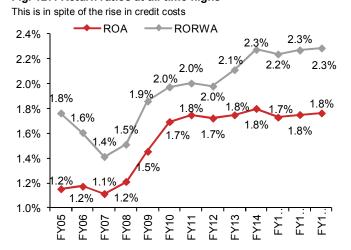

- We expect a pick up in earnings growth in FY16F: The core PPOP growth for Axis Bank has moderated in the past three-four quarters and we expect earnings growth to consolidate in FY15F as near-term NIMs have peaked and some of the non-core FX revaluation gains on the repatriation of overseas business profits are unlikely to recur in FY15F. But, as we expect credit costs to come off in FY16F/F17F, Axis Bank could deliver an earnings CAGR of 21% over FY16-17F.
- ROAs and RORWAs significantly higher than that in the last cycle when valuations were 2.3x the forward book: NIMs improvement, led by CASA improvement and the sustenance of high fee/assets at ~2%, has led to ROAs moving up from 1.2% in FY06-08 to 1.7-1.8% in FY14 and hence RORWAs have moved from 1.5% in FY06-08 to 2.2% currently. This would imply higher normalised ROEs for Axis in this cycle than in the last cycle and hence valuations could likely surprise, in our view. Axis Bank's RORWAs are comparable with that of most retail banks in spite of the high credit costs currently.

Fig. 126: We expect a pick up in earnings from FY16F

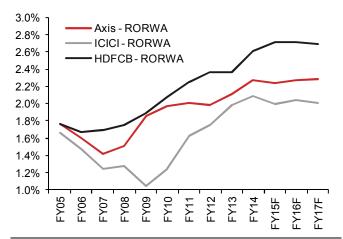

Source: Company data, Nomura estimates

Fig. 127: Return ratios at all-time highs

Source: Company data, Nomura estimates

Fig. 128: ROAs/RORWAs comparable with retail banks

Valuations: Reasonable in spite of the recent re-rating

Our target price of INR2,300 is based on 2.1x FY16F book (BVPS: INR1,080). This is higher than the multiples at which Axis has traded in the past two-three years but lower than FY04-07 multiples. While growth over the next two-three years is likely to be lower than the last cycle, ROAs are much more superior now (1.75% vs. 1.2% in FY04-07) and B/S and P&L granularity makes the business model less risky. We, thus, expect Axis Bank to close the valuation gap with private peers as risks surrounding large corporate asset quality ebb.

Risks: (1) A slower-than-expected recovery in corporate capex execution; and **(2)** the indirect impact of weak monsoons – higher rates.

Fig. 129: Return ratios have improved in the past 5-7 years - we expect Axis to maintain ROAs/RORWAs

NOMURA

HDFC Bank HDBK.NS HDFCB IN

EQUITY: BANKS

Delivering not only on earnings growth but also on most underlying metrics

Action: Enough buffers to deliver consistent earnings growth

Following a transfer of coverage, we have a Buy rating on HDFCB and a target price of INR950. Our positive view is driven by a mix of: 1) steady profitability with a large floating provision cushion; 2) improvements in most underlying metrics; and 3) increasing and sector-best RORWAs/ROAs. We view recent underperformance due to technical reasons as a good entry point.

- HDFCB has been able to manage earnings well, driven by slower opex growth in FY14. It also has more levers in the form of floating provisions (INR18bn) that provide a cushion to profitability.
- Strength in most underlying metrics HDFCB has top CASA market share, top NEFT/RTGS market share (3x that of ICICI/Axis) and improving PSL compliance. This should help sustain premium valuations, in our view.
- We expect EPS growth to moderate from 23-24% over the last decade to a ~20-21% CAGR over the next three years. RORWAs have grown from 1.7% to 2.7% and hence we believe through-cycle ROEs are likely to be higher than historical levels.

Catalysts: 1) Pick-up in retail credit in 2H15F in cars and FY16F in commercial vehicles to aid growth; 2) MSCI issue priced-in; 3) any announcement of firm capital raising plans as that would be book accretive without material EPS dilution.

Valuations: Premium valuations to hold; our preferred defensive pick Our INR950 TP is based on 3.75x Mar-16F book (3.4x Mar-16F book assuming an INR80bn dilution). Recent underperformance has been due to technical reasons and we believe premium valuations will be sustained as we expect earnings to be the most resilient in the sector while underlying metrics remain superior to those of its peers. The valuation gap with peer retail banks is low at 10-20% on FY16F P/B and <10% on FY16F P/E.

Delivering on most underlying metrics

We look at many of the underlying metrics which may or may not be drivers for near-term earnings growth, but certainly contribute to improving the business model and hence the longer-term profitability of the business. HDFCB continues to deliver on many of these:

- Top CASA market share: HDFCB's high CASA share is well known, but even its incremental share of the capital account (CA) and savings account (SA) market has grown over the last five years in CA it dominates the SME/business banking market with Axis, and in SA it dominates the salary SA market with ICICI. Its CA business is a lot more reliant on capital market businesses and any improvements in capital markets should help its CA flows.
- Top NEFT/RTGS market share: HDFCB has a market share of over 20% in RTGS and ~13% in NEFT the two payment systems that process ~80% of banking system flows. Its market share is 3-4x of ICICI/Axis, indicating its dominance. This shows HDFCB's ability to get customer flows across the retail, SME, corporate and government segments through its systems.
- Best positioned for rural growth: Currently, more than 50% of HDFCB's network is in rural areas, which should aid PSL compliance over time. HDFCB is better placed than its peers on PSL compliance, hence its RIDF burden should be lower.

Low risk to earnings growth; steady improvement in profitability

Moderation in retail growth pulled down revenue growth in 2HFY13 and FY14, but significant consolidation on the opex side (just 7% y-y growth in FY14) led to strong PPOP growth of ~25% y-y in FY14. While we expect opex levers to peak in 1HFY15, we see two or three levers for profit growth in the next two to three years:

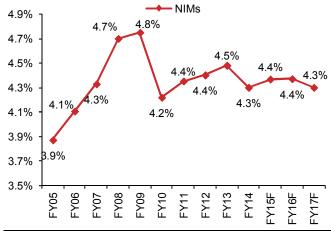

- We expect improvement in retail growth from 2HFY15F, which is generally margin accretive as yields are higher in the retail than the corporate book.
- 2. Fee income growth looks to have bottomed, especially on third-party distribution income (contracted ~28% y-y in FY14). We expect an improvement there.
- 3. Floating provision stock of INR18bn provides significant cushion to credit costs (60bp of loans) extra provisions amount to almost one year of specific provisions.

Fig. 134: Revenue growth has moderated with slower balance sheet growth, but opex provides a buffer in FY14. We expect to see more levers in FY15F

Fig. 136: We expect HDFCB to sustain best-in-class return ratios

Source: Nomura estimates

Premium valuations to be sustained; our preferred defensive pick

Our TP of INR950 is based on 3.75x Mar-16F book (3.4x Mar-16F book assuming an INR80bn dilution). The reasons for the recent underperformance have been rather technical and we believe premium valuations will be sustained as not only do we expect HDFCB's earnings to be the most resilient in the space, but its underlying metrics remain superior to those of its peers as well. Its valuation gap with peer retail banks (Kotak and IIB) is now low at 10-20% on FY16F P/B and <10% on FY16F P/E.

Risks: 1) A slower-than-expected pick-up in retail credit growth; and 2) any significant change in underwriting standards of retail loans.

Fig. 137: Earnings growth to slightly moderate but return ratios have only gone up

NOMURA

ICICI Bank ICBK.NS ICICIBC IN

EQUITY: BANKS

ROE improvement to continue

Valuation gap with peers to narrow as asset quality concerns ebb

Action: Assuming coverage with INR1,650 TP- Among our top Buys

Following transfer of coverage of ICICI Bank, we rate the shares Buy with a TP of INR1,650. ICICI's ROEs, over the past 2-3 years, have improved despite a slowdown driven primarily by NIM improvement. Though margin levers look exhausted now, we see opex levers playing out in the near-term and credit cost and leverage improvements should drive core ROEs (to 16-17%) over the next 2-3 years. ICICI finally seems to be delivering on business banking/CA business (historic weakness), and while asset quality concerns will only ebb gradually, our analysis of its large corporate/SPV exposures is comforting given ICICI's low exposure to sub-segments where LGD (loss given default) could be higher.

- ROE improvement levers: 1) Opex levers are high as ICICI added more employees in the past 18 months vs HDFCB/Axis. 2) We expect credit costs to come off for ICICI meaningfully from FY16F. 3) Leverage improvement.
- Asset quality guidance on reduction in delinquency (NPA +restructuring) is comforting after a miss in FY14 – Overseas coal + a legacy gas asset are lumpy risks but otherwise its large corporate/infra risks are manageable.
- Liabilities more granular than the last cycle and even ROAs at 1.8% are significantly higher than the last cycle (1.2-1.3% ROAs between FY06-10).

Catalysts: (1) Reduction in incremental slippages and restructuring as guided will be positive (2) Continued traction in business banking/CA business which has been an inherent weakness for ICICI.

Valuation: Reasonable despite recent re-rating

Our INR1,650 TP is based on 2.1x Mar-16F book for the lending business and INR 272 of subsidiary valuations. As ICICI closes the ROE gap with peers as the B/S leverages up and asset quality concerns on large corporates ebb, we would expect its valuation gap to narrow vs. retail peers and current valuations at 1.75x Mar-16F book look undemanding. We prefer Axis on a relative basis.

Profitability improvement to continue

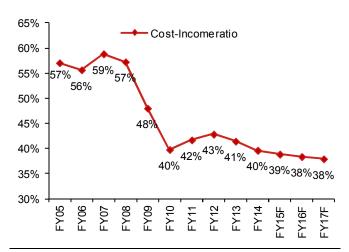

ICICI's ROAs have improved consistently over the past 3-4 years, driven largely by a ~60-70bp improvement in margins over the past four years. With domestic CASA ratios stabilising and asset mix unlikely to move up yields, we believe NIM improvement looks largely done in the near- to medium-term. But we see other levers that will aid profitability:

- Opex growth: Most large private banks, in their austerity drive, hired fewer
 employees in the past 12 months. However, ICICI's net employee addition was the
 highest among the large private banks, and hence we believe opex growth could
 surprise in FY15F. We factor in ~200bp cost-income drop for ICICI over the next 2-3
 years.
- 2. Fee growth likely to keep pace with B/S growth now: Core fee-to-assets has been falling for ICICI, as large corporate fees have contracted and third-party fees suffered due to regulatory changes. We see both these fee streams bottoming out and hence expect core fee growth to keep pace with B/S growth from here on.
- 3. **Credit costs:** Unlikely to improve in FY15F given some regulatory provisioning required, but we expect an improvement in credit costs from FY16F.
- **4. Leverage:** ICICI's leverage in the lending business has been low, and with growth expected to pick-up we expect leverage to gradually improve.

Fig. 141: ROA improvement was led by NIMs in the past. Going forward, ROA improvement will be led by opex and credit costs. Improvement in leverage to aid ROEs

Good on SA always; working on CA now

ICICI's liability franchise has seen a significant transformation from the past cycle, with CASA improving to 42-43% from 22-23% in FY07-08, and total CASA + retail term deposit ratio improving to 80% from 54% in FY09. While ICICI's SA momentum has held up well given its leadership in the salary SA segment along with HDFCB, its CA business suffered between FY10-13 given its weakness in business banking and CA mobilisation. Management has been working on business banking and CA sourcing, and FY14 current account numbers indicate some pick-up for ICICI in CA mobilisation in FY14. If the business banking and CA momentum continues, it will be a positive for ICICI as it will bridge a large gap in ICICI's business model with peers.

Fig. 144: CASA market share – ICICI has managed SA share well but has lost out on CA market share in the past 3-4 years

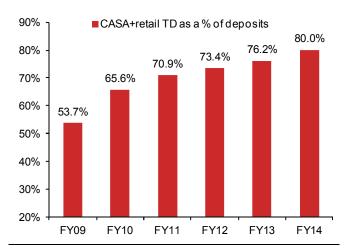

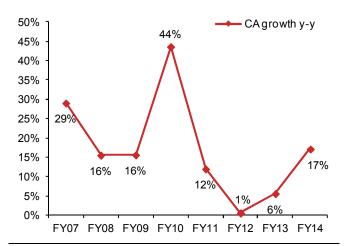

Fig. 146: CA growth has been weak but there has been some pick-up in FY14

Source: Company data, Nomura research Source: Company data, Nomura research

Asset quality guidance indicates that the worst is behind

ICICI Bank's incremental stress accretion inched up in FY14, with some large restructuring cases in 2HFY14. With most of these accounts recognised, management believes that incremental stress accretion for ICICI will be lower in FY15F vs. FY14 which is a positive. There are some lumpy asset quality risks in a legacy gas asset and two international coal assets that ICICI has funded, but apart from that our analysis of INR4tn of risky large corporate/infra SPV exposures indicates that ICICI's risk is manageable with low exposure to sub-sectors that could have high LGDs (loss given default).

Fig. 147: ICICI's incremental stress accretion will be lower from here on

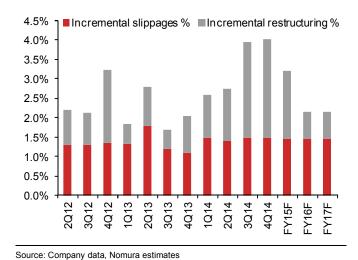

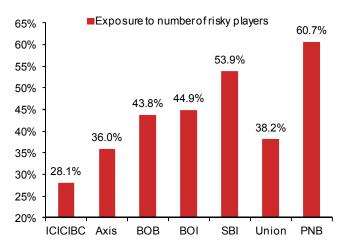

Fig. 148: ICICI's risk lower to the INR4tn of risky large corporate/infra SPVs we looked at

Source: Ministry of corporate affairs, Media sources, Nomura estimates

Valuation: Reasonable despite recent re-rating

Our TP of INR1650 is based on 2.1x Mar-16F book for the lending business and INR272 of subsidiary valuations. As ICICI closes the ROE gap with peers as the B/S leverages up and asset quality concerns on large corporates ebb, we would expect its valuation gap to narrow vs. retail peers and current valuations at 1.75x Mar-16F book look undemanding.

We prefer Axis Bank (Buy) on a relative basis vs. ICICI for its better delivery on CASA over the past 4-5 years, better capital efficiency and relatively same asset quality risk as ICICI vs. consensus perception of higher risk. ICICI's recent underperformance vs. Axis though (~30% in past six months) has closed down Axis's discount to ICICI though.

Nomura | ICICI Bank 8 July 2014

Risks: 1) Some lumpy asset quality risks – legacy gas assets and overseas coal assets funded by ICICI; and 2) slower-than-expected turnaround of GDP growth.

Indusind Bank INBK.NS IIB IN

EQUITY: BANKS

Delivering well on most counts but CV recovery to some extent priced in

Action: Resume coverage with Buy rating and TP of INR630

IndusInd Bank has delivered well on most targets set on profitability in the past five years under the new management and navigated the recent volatility in the asset quality/rate cycle well. While IIB is well leveraged to an upcycle (CV improvement + growth tick-up) and our earnings growth expectation is one of the highest (23% CAGR over FY14-17F) on the Street for IIB, we believe current valuations are factoring in some of the positives. We prefer HDFCB on a relative basis.

- What we like in IIB: (1) a niche CV financing NBFC-like business housed within a bank which leads to better margins; (2) strong build-up on CASA both on CA and SA businesses; and (3) good niches built for fees like debt IB and retail that have led to one of the highest fee/assets for IIB.
- What needs to improve for us to become more positive: (1) recent growth in the mid-corporate book has been high and higher RWA/loans in FY14 vs. FY13 indicate some increase in risk-taking building up risk in an upcycle may not materialise in higher credit costs but investors should consider valuations accordingly; (2) while the deposit franchise has improved significantly for CASA, IIB's term deposits are still ~50% funded through wholesale deposits which expose the bank to liquidity squeeze.

Catalysts: Steady trends in corporate asset quality and improvement in CVs will be positive catalysts.

Valuations: Not undemanding

Our TP of INR630 implies \sim 2.8x Mar-16F book. While profitability and profit growth for IIB are best in class, IIB's earnings will be a little more cyclical than HDFCB/Kotak given its liability and asset mix and high loan growth, in our view. Our TP of INR630 implies a 25% discount to HDFCB's P/B multiple, which we believe is fair.

Global Markets Research

8 July 2014

Rating From Suspended	Buy
Target price From N/A	INR 630
Closing price 3 July 2014	INR 573
Potential upside	+9.9%

Anchor themes

A good recovery play but largely in the price.

Nomura vs consensus

Our FY15/16F earnings estimates are marginally below consensus due to some moderation in fees that we expect.

IIB has delivered well on most fundamental metrics under new management

IndusInd Bank has been the most improved bank in the past five years in India since the time the new management under Mr. Sobti took over. While IIB had a niche CV financing arm working within the bank, the new management has delivered extremely well on getting the liability franchise in place with CASA moving up from <20% to ~33% currently and improving fee/assets from ~1.1-1.2% of assets (in line with regional private banks) to +2% currently (which is best in class among private banks). This momentum has largely led the transition in profitability from <50bp of ROAs to ~1.8% of ROAs currently.

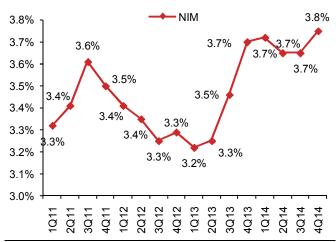

Our expectation is that there could be some moderation in fees/asset for IIB over the medium term as current yields in its debt IB business are too high to sustain but cost-income will likely moderate and IIB will be able to maintain its profitability. As we expect loan growth to remain higher than peers, we believe EPS growth for IIB in the next two-three years could be one of the highest in our coverage universe.

Fig. 153: CASA momentum has been strong in the past 4-5 years and we expect the robust performance to continue

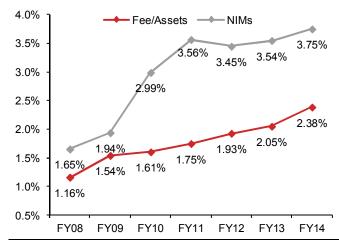

Source: Company data, Nomura estimates

Nomura I Indusind Bank 8 July 2014

What needs to change for us to be more positive?

- 1. Valuations: As we have mentioned above, some of the positives seem to be factored in the price and current valuations at ~2.55x Mar-15F book (BVPS: INR225) look relatively fair to us. So, if valuations correct by >10%, then the riskreward will get incrementally attractive, in our view.
- Large share of retail term deposits: While the CASA franchise for IIB has improved significantly and has exceeded expectations, IIB's term deposit book is still ~50% funded by wholesale deposits and that exposes IIB to liquidity squeeze (like in July-13) – While IIB exhibited significant flexibility in raising funding through IBPC and overseas funding during July to Sep-13, we believe longer term risks remain. If IIB is able to build on its retail term deposit franchise, it will ensure lower margin volatility, we believe.
- How risks play out in IIB's corporate book: IIB's mid-corporate loan growth of 50% y/y in FY14F was high and segmental exposure analysis suggests that IIB did take some exposure to sensitive segments with RWA/loans increasing. While management is comfortable with the names it has underwritten and risks may not play out in an upcycle, how eventually the corporate book asset quality plays out will also be key to watch out for.

Fig. 157: While CASA has inched up, overall liability franchise still much weaker than the big boys

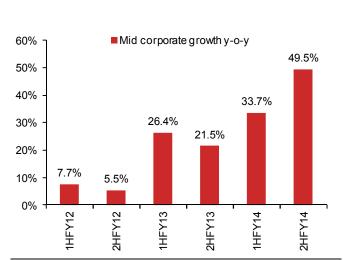

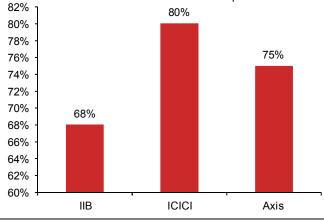

Fig. 158: Some risk build-up in the corporate book in 2HFY14

■CASA+retail TD as a % of deposits

Source: Company data, Nomura research

Valuations: Not enticing enough

Our TP of INR630 implies ~2.8x Mar-16F book (BVPS: INR225). While profitability and profit growth for IIB are best in class, IIB's earnings will be a little more cyclical than HDFCB/Kotak given its liability/asset mix and high loan growth, in our view. Our TP implies 25%/10% discounts to the P/B multiple of HDFCB/Kotak which we believe is fair. If some of the expected improvements materialise over time, then we believe that the discount to some of the defensive peers may come off.

Risks: slower-than-expected recovery in the CV cycle and higher-than-expected credit costs.

Nomura | Indusind Bank 8 July 2014

NOMURA

Kotak Mahindra Bank KTKM.NS KMB IN

EQUITY: BANKS

Not much to complain except for valuations

Management comfort high but valuation comfort low

Action: Positioned well for an upcycle in spite of low credit costs

We initiate coverage of Kotak Bank with a Neutral rating and TP of INR920. While we like Kotak's low risk business model, valuations look expensive.

Kotak Bank has been able to consistently deliver profitable and low risk growth even in the past 3-4 years and its profitability remains second just to HDFCB with RORWAs of 2.3%. While credit costs at ~40bps in the past 3 years (FY11-14) do not leave any scope for any significant asset quality upside in an upturn, but we think Kotak Bank is still well positioned for an upcycle because:

- Capital levels of ~18% tier-1 are the highest -- with an improving macro, management will likely push on the growth peddle over the next 2-3 years and historic evidence of ramping up growth in an upcycle is strong -- the only challenge will be getting back corporate relationships which Kotak will have let go off in stressed times, in our view.
- As mentioned above, asset quality-linked upside is limited but Kotak has been acquiring stressed assets which management expects to yield ~INR8-10bn of gains in the next 3 years -- we factor in ~INR3-4bn of gains.
- Kotak has retained its leadership in most capital market businesses and with improvement in market sentiment/volumes, we expect profits of Kotak's flow business to grow ~2x in the next three years.

Catalysts: Continued delivery on CASA/fees/business banking + pick-up in retail credit growth

Valuations: Expensive, but can remain so

Our TP of INR920 for Kotak implies ~3x Mar-16F book for its lending business (bank + NBFC) after factoring in INR140 for its flow business. Its current valuations are just at ~10% discount to HDFCB on P/B (for ~500bps lower ROEs) and ~20% premium to HDFCB on P/E. We, thus, prefer HDFCB.

Target price Starts at	INR 920
Closing price 3 July 2014	INR 891
Potential upside	+3.2%

Anchor themes

Kotak can kickstart growth quickly as it did in the previous cycle. Also, our comfort with Kotak's underwriting remains high.

Nomura vs consensus

Our earnings estimates are not comparable due to a mix of standalone and consolidated reporting by consensus.

Fig. 170: Our expectations on Kotak's profitability in the banking business

Source: Company data, Nomura estimates

Fig. 171: We expect capital market profitability to grow 2x in next three years

Valuations: Expensive but can remain so:

Kotak Bank's current valuations at ~2.9x Mar-15F book after adjusting for INR140 of valuations for its flow business is certainly expensive, in our view. While asset quality is likely to hold up the best as management has been very conservative on growing in the past 18 months, we see valuations stretched on a relative basis with HDFCB (Kotak just at a 10% discount on FY16F P/B and ~20% premium on FY16F P/E). The premium valuations could sustain given: (1) high RORWAs; (2) continuity of top management and investor comfort with its conservative approach to asset quality; and (3) relatively strong leverage to an upcycle as well.

We value Kotak Bank on a sum-of-the-parts basis with a TP of INR920. We value all the subsidiaries (ex-Kotak Prime) at INR140. Our residual TP for Kotak implies a ~3x Mar-16 book (BVPS: INR259) for its lending business.

Risk: (1) Downside: Slower-than-expected loan growth will delay the leveraging up process. (2) Upside: A better-than-expected turn in profitability of capital market businesses and higher-than-expected gains from stressed asset book.

Fig. 172: Kotak Bank SOTP value of INR920

NOMURA

Yes Bank YESB.NS YES IN

EQUITY: BANKS

Comfortable with its underwriting, but B/S and P&L lumpiness needs to be addressed

Action: Assuming coverage with Buy and a TP of INR620

Yes Bank's asset quality has held up well in the current cycle and our analysis of its past loan/bond syndications, and limited exposure to INR4tn of risky corporate/SPV lending that we looked at, provide us comfort on its underwriting. But part of its fees/margins is generated from lumpy churn business which adds to its earnings volatility and though its liability franchise is improving, 45-50% of its deposits are still bulky and hence we believe investors should assign a multiple accordingly. An expected upcycle in corporate credit (growth/asset quality) drives our Buy rating.

- Positives: (1) Underwriting comfortable: Bloomberg data on loan/bond syndications done by Yes Bank indicates reasonable underwriting. Also, except for some commercial real estate exposure, the bank has limited exposure to stressed corporate we looked into. (2) With Tier-1 at +13% now, we believe it is now well positioned for a pick-up in corporate credit.
- Improvements needed to drive multiples up: (1) Wholesale funds form 45-50% of Yes Bank's deposits highest among private banks; (2) Churn business (syndications/IBPC) contribute +50bp to lending yields/margins and this is unlikely to continue in the same proportion of B/S; (3) Financial advisory/markets (lumpy fees) contribute ~60% of fees which is generally more volatile improving share of transaction banking/retail fees will help.

Catalysts: (1) Benign liquidity will be a near-term trigger (2) Reducing P&L and B/S granularity will drive long-term valuations

Valuations: Cyclical tailwinds to help

Our TP of INR620 implies 1.9x Mar-16F book which is ~10% discount to our multiple for Axis/ICICI. While the growth outcome over FY14-17F would be higher for Yes Bank, its assets/liabilities need to get a lot more granular vs. Axis/ICICI, we think.

Global Markets Research

8 July 2014

Rating From Suspended	Buy
Target price From N/A	INR 620
Closing price 3 July 2014	INR 563
Potential upside	+10.1%

Anchor themes

We are comfortable with its underwriting but B/S needs to be more granular. Currently, the improving cycle is in its favour.

Nomura vs consensus

Our FY15/16F earnings estimates are slightly lower than consensus.

Nomura | Yes Bank 8 July 2014

Positives: Comfortable with underwriting + Cycle in its favour

We see limited risks to Yes Bank's underwriting:

Bloomberg provides data on syndications/underwriting of loans/bonds historically done
by banks. Our analysis of Yes Bank's past transactions does not indicate any excessive
risk-taking and since part of the exposure is retained in its B/S, it provides us some
comfort on asset quality.

 Our analysis of INR4tn of risky corporate/SPV exposure indicates that Yes Bank's exposure to risky corporate/infra SPVs is limited, except for some exposure to commercial real estate where LGD (loss given default) is likely to be lower.

Fig. 175: Break-up of syndicated loans by Yes Bank in past five years

Total Syndications	14,426	
NBFCs	4,369	30.3%
PSU Enterprises	1,040	7.2%
Corporates/ SPVs	9,017	62.5%
Large AAA/AA groups	4,253	29.5%
Mid corporates/SPVs	2,779	19.3%
Small Caps	1,985	13.8%

Source: Bloomberg, Nomura research

Fig. 176: Exposure to risky corporate is low except commercial real estate

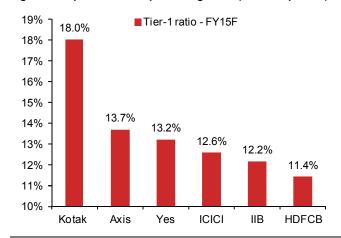

Source: Ministry of corporate affairs, Media sources, Nomura estimates

The cycle in its favour:

- ~90% of Yes Bank's loan book comprises corporate loans, where growth has slowed down over the past 1-2 years. However, as we expect a pick-up in corporate loan growth, and Yes bank having raised sufficient capital (Tier-1 level of +13%), we believe Yes Bank is leveraged to an expected pick-up in growth.
- Also, we expect liquidity to remain benign over the next 12-18 months, and with Yes
 Bank being wholesale funded, stability in rates should aid margins We take this
 benefit in Yes Bank's P&L but would refrain from assigning a multiple, as we believe
 wholesale funded entities like Yes will remain vulnerable to a liquidity squeeze, as it did
 during Jun to Sep-13.

Fig. 177: Capital now adequate for growth (Tier-1 capital %)

Source: Company data, Nomura estimates

Fig. 178: Wholesale cost of funds has eased

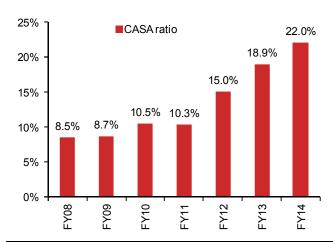

Source: Bloomberg, Nomura research

Nomura | Yes Bank 8 July 2014

Improvements needed to drive up multiples:

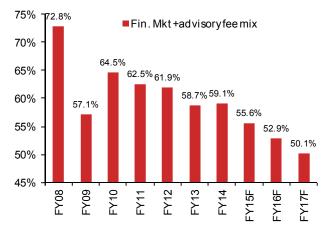

- While CASA, especially SA accretion, has received a flip-up from saving de-regulation and Yes Bank's share of retail TD has been inching up, wholesale funding is still ~45-50% of Yes bank's deposits vs. just 20-25% wholesale funding for Axis/ICICI.
- Financial markets and advisory (ex treasury income) contribute ~60% of Yes Bank's fee. While this number has dropped from +75% since its inception, its reliance on these fee streams has remained at ~60% over the past 4-5 years. We factor in an increase in the share of transaction and retail fees, and strong delivery on making granular fee streams will be a positive.
- Yes Bank's yields on a calculated basis are higher owing to the interest spreads that
 Yes Bank makes on its IBPC book (inter-bank participatory certificates) and interquarter interest on its syndication book (which gets sold down before the ends of a
 quarter). We are unsure if Yes Bank will be able to grow this portfolio in line with its B/S
 size going forward.

Fig. 179: CASA share has improved

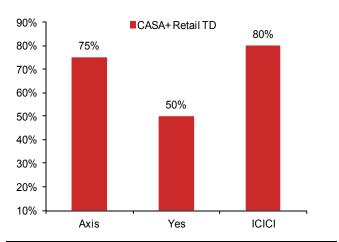

Source: Company data, Nomura research

Fig. 181: Financial markets and advisory still contribute ~60% of the fees – This is generally bulky in nature

Nomura | Yes Bank 8 July 2014

Valuations: Cyclical tailwinds to help

Our TP of INR620 implies 1.9x Mar-16F book which is at ~10% discount to our multiple for Axis/ICICI. While the growth outcome over FY14-17F would be higher for Yes Bank, its assets/liabilities need to get a lot more granular like Axis/ICICI, and hence the discount in our target multiple. Yes Bank trades at 1.75x Mar-16F book which is similar to what ICICI/Axis trade at currently, and hence, at similar valuations, we prefer Axis/ICICI.

Risks: (1) Spike in wholesale rates will impact Yes bank's margins – our base case is of benign liquidity and stable wholesale funds; and (2) any large negative surprise on asset quality.

Fig. 183: We expect ROEs at +18% despite the dilution

NOMURA

Bank of Baroda BOB.NS BOB IN

EQUITY: BANKS

Valuations now factor in transition risk; underwriting has been relatively better

Action: Better asset quality plus undemanding valuations

Following transfer of coverage of Bank of Baroda (BOB) we rate the shares Buy, with a TP of INR1,025. Not only has BOB's asset quality held up better than most PSU banks in this cycle, even its delivery on the liabilities side has been better than peers (CASA growth higher than peers), leading to BOB's industry-leading RORWAs. This, we believe, has been driven by three successive successful Chairmen changes making it the most improved PSU bank. Fundamentally, a low stressed asset base for BOB implies lower asset quality upsides in a macro recovery, but we see meaningful margin levers for BOB in FY15/16F and capital adequacy ensures flexibility to grow in case of an upcycle.

- Recent underperformance (~20% since elections) factors in a transition risk, with valuations now at par with PNB (2x stressed assets as BOB). Also, our analysis of large corporate/infra SPV exposure indicates that BOB's underwriting has been relatively less concentrated and risky than peers, and this reduces possibility of an asset book clean up in case of a transition.
- Profit levers: 1) highest NIM contraction despite lower NPAs indicates low-risk lending and hence we see significant scope for margin improvement for BOB; and 2) ability to grow faster due to low capital constraints.

Catalysts: The current Chairman retires after 1QFY15, and stability in asset quality after the transition will be a key stock catalyst

Valuation: Underperformance adequately factors in transition risk

Our TP of INR1,025 implies 1.1x Mar-16F book based on our normalised ROE assumption of 15.5%, and is ~20% higher than our target multiple for PNB given the lower asset quality risk/better under writing. While an impending transition will remain a concern till transition, the recent underperformance and better historical underwriting provide us some comfort.

Asset quality and better underwriting provide some comfort from impending transition

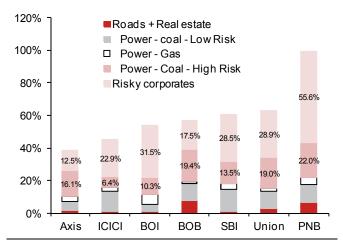

BOBs incremental stress accretion, over the past three years, has been the least, leading to a stressed asset book of 8.5% of loans vs. +10% of loans for peers. While exposure quantum to stressed assets is largely similar, we attribute the better asset quality performance largely to difference in asset selection. Our analysis of +INR4tn of risky large corporate and SPV assets corroborates this view with BOB's exposures to these assets being lowest among PSUs and, more importantly, less concentrated. This provides us comfort on BOB's asset quality and reduces the likelihood of large negative surprises on asset quality.

Fig. 186: Gross NPA + restructured book is the lowest

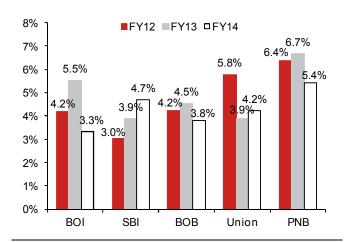

Source: Company data, Nomura research

Fig. 188: Exposure to stressed sectors similar to peers

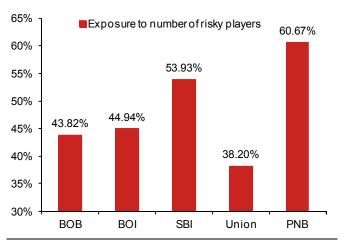

Source: Ministry of corporate affairs, media sources, Nomura research

Fig. 187: Flow of stressed asset also lowest in past three years

Source: Company data, Nomura research

Fig. 189: But exposure to risky names lower – Indicates better underwriting/asset selection

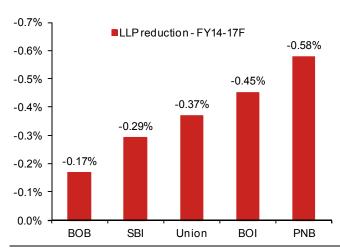

Source: Ministry of corporate affairs, media sources, Nomura research

How much would BOB benefit in an upcycle?

From an asset quality perspective, BOBs improvement should be lower than peers (we estimate a 20-30bp drop in credit costs over the next two years vs. 40-50bp for peers), given the low base of stressed assets but we believe growth over the next two years and margins improvement could be better. (1) BOB's domestic margin contraction has been highest among PSUs despite its lower interest reversals / NPA impact and that indicates that BOB has reduced its riskiness in its asset book and hence there is a higher scope for margins to move up (2) Also, BOBs Tier-1 capital of +9% is the highest among PSU banks and hence BOB is unlikely to have any growth constraints in case of an up cycle.

Fig. 190: Credit cost reduction expected in next 2-3 yrs

Fig. 193: CET-1 levels best among peers – We see limited growth concerns for BOB in case of an upcycle

Source: Company data, Nomura research

Valuation: Underperformance adequately factors in transition risk

Our TP of INR1,025 implies 1.1x Mar-16 book based on our normalised ROE assumption of 15.5% and is 15% higher than our target multiple for PNB given the lower asset quality risk/better under writing. While an impending transition will remain a concern till transition, the recent underperformance and better historical underwriting provide us some comfort.

Risks: (1) Any near-term asset quality volatility due to a transition, and (2) slower-thanexpected pick-up in economic activity.

Fig. 194: ROEs for BOB will improve to +15.5% (higher than Cost of Equity)

NOMURA

Bank of India BOLBO BOLIN

EQUITY: FINANCIALS

Valuations reasonable but will need to step off the growth pedal

Action: NPA accretion in line with peers; Capital + Pensions to be sorted We initiate coverage of Bank of India (BOI) with a Buy rating and TP of INR330. While NPA spelldowns and higher reductions from restructuring make BOI's stressed asset comparison difficult with peers, incremental NPAs+ restructuring flow has been similar to better-valued peers, and historic underwriting in large corporates/infra SPVs has not been the most aggressive. Valuations at 0.7x Mar-16F book look reasonable in that context but a moderation in management's growth outlook would help.

- BOI's capital position remains worst among our covered PSUs (CET-1 of <7%), and we remain surprised with management's higher-than-system growth strategy (28%/21% loan/RWA growth in FY14 Our interactions don't suggest an intended consolidation in FY15 either and this adds to dilution risk. We already assume ~40% dilution for BOI over FY14-17F.
- Our analysis shows that BOI is underprovided on pensions and its P&L provisioning will need to catch up with peers like it did for BOB in FY14.

Catalysts: B/S consolidation for 12-18 months should help improve capital position and help consolidate asset quality and liabilities as well - We would also get more constructive if mgmt slows down on growth

Valuations: Scope to move up if growth is more aligned to capital levels Our TP of INR330 is based on 0.8x Mar-16F book which is marginally lower than our target multiple for Union (targeting slower growth) and at a 15-25% discount to PNB/BOB, factoring in lower normalised ROEs (13.5% vs. 15-16% for PNB/BOB) and capital raising challenges expected. While asset quality and some dilution-linked NIM improvement should move up ROAs from 0.55% in FY14 to +0.70% in FY16/17F, ROEs will remain constrained at 13.5% due to lower leverage; an intended consolidation could push up valuations though.

Valuations: Scope to move up if growth is more aligned to capital levels

Our TP of INR330 is based on 0.8x Mar-16F book which is marginally lower than our target multiple for Union Bank (targeting slower growth) and at a 15-25% discount to PNB/BOB factoring in lower normalised ROEs (13.5% vs. 15-16% for PNB/BOB) and expected capital raising challenges. While asset quality and some dilution-linked NIM improvement should move up ROAs from 0.55% in FY14 to +0.70% in FY16/17F, ROEs will remain constrained at 13.5% due to lower leverage; an intended consolidation could push up valuations though.

Downside risk: 1) Continued aggression on growth by management.

Nomura | Bank of India 8 July 2014

NOMURA

Punjab National Bank PNBK.NS PNB IN

EQUITY: BANKS

Significant exposure to tail risks

Gradual recovery does not warrant exposure to the most aggressive underwriter

Action: Recovery to help, but tail risks remain; Reduce

We assume coverage of PNB with a Reduce rating and INR925 target price. PNB's stressed assets (gross NPAs + restructuring) are the highest of the large PSUs, but this does not make PNB an ideal recovery play, in our view:

- We expect only a gradual recovery in asset quality, as in this cycle the stressed assets have longer gestation periods than in the last. Hence, PNB's credit costs will continue to be higher than peers'.
- PNB's restructured book, at ~10% of loans, is one of the highest among PSUs. Our analysis indicates that relapse risk from system restructuring is very high, as over 50% of CDR cases continue to have weak interest coverage. Within our universe, we expect PNB to be the most affected.
- While PNB's profitability should be comparable to BOB/SBI over FY15-17F factoring in a recovery, we do not see merit in assigning the same multiple to a more aggressive underwriter. Our analysis shows that PNB's participation and concentration in risky large corporate loans/infra SPVs exposure is the highest.
- Positives: 1) high CASA bank, though growth in CASA has been weaker than peers; 2) relatively better provided on pensions; and 3) slower balance sheet growth in the past 18-24 months has aided consolidation of liabilities.

Catalysts: Delinquencies to remain higher than peers. Risks of relapse in restructured book to play out in the near term.

Valuations – Not worth the risk after the mean reversion in valuations Our INR925 TP is based on 0.8x Mar-16F book (0.9x Mar-16F adjusted book) and implies a discount of 15% to our valuation multiple for BOB (better asset quality and higher ROEs). Recent share price outperformance has narrowed PNB's valuation discount to peers significantly (from 30-40% to 10-20%) and hence at current valuations we prefer SBI/BOB among the PSUs.

Nomura | Punjab National Bank 8 July 2014

Underwriting was the most aggressive in the last cycle – We assign a discount to PNB vs. PSUs with similar ROEs

PNB's stressed assets at \sim 15% (gross NPA of 5.25% and a restructured book of 10.5%) are the highest among PSUs because of its adverse selection and higher concentration. While an overall recovery should aid asset quality for all PSUs, we believe investors should assign a lower multiple to PNB even against banks expected to generate similar ROEs.

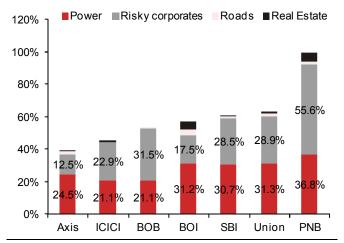

Aggressive underwriting in the past cycle: In our analysis of bank-wise exposure to INR4trn of risky infrastructure SPV / commercial real estate / large corporate exposure, we found that: (1) PNB's exposure to the stressed assets that we looked at is 60-70% higher than that of the other large PSUs; (2) its presence in these risky assets was the highest, with PNB present in 60% of the risky assets we looked at against average participation levels for peer PSUs at 40%; and (3) concentration risks are higher than they are at SBI/BOB.

PNB remains more exposed to one of our key tail risks

As highlighted earlier in our report, a large part of PNB's restructuring book comes from its principal and interest moratoriums over the next two years. Our analysis of the financial performance of CDR cases indicates that there is a large relapse risk in the restructured book. PNB, on average, has restructured ~4% of its loan book in the past

Nomura | Punjab National Bank 8 July 2014

three years and remains the most vulnerable – our discussions with management also indicate possible stress from the restructured book.

Valuations - Not worth the risk after the mean-reversion in valuations

Our INR925 TP is based on 0.8x Mar-16 book (0.9x Mar-16 adjusted book) and implies a discount of 15% to our valuation multiple for BOB (better asset quality and higher ROEs). The recent outperformance has narrowed PNB's valuation discount to peers significantly (from 30-40% to 10-20%) and hence at current valuations we prefer SBI/BOB among the PSUs. While PNB's ROEs are comparable to BOB/SBI, as we have mentioned above, the same multiple is not warranted given the higher risk inherent in PNB's higher-yield/higher-credit cost model.

Risks: A larger-than-expected economic recovery, such that even inferior businesses turn around quickly.

Fig. 215: We factor in profitability to improve as asset quality improves

State Bank of India SBLNS SBIN IN

EQUITY: BANKS

Current management inspires some confidence

Action: Expect delinquency levels to converge with peers soon

Following transfer of coverage of State Bank of India (SBI), we rate the shares Buy with a TP of INR3,050. SBI's recent trends on incremental net delinquency have been weaker than peers' especially on gross slippages. While mid-corporate NPAs are the highest for SBI (~11% of loans), its underwriting in large corporate/infra SPVs is relatively of better quality vs. PSU peers and hence we expect SBI's delinquency levels to converge with peers' in FY15F. Its liability franchise remains best-in-class among PSUs despite slower growth over the past few years and SBI remains well placed on capital/pensions.

- Our analysis indicates that SBI's large corporate/infra exposure is relatively
 to better rated corporates and hence the higher-than-peers delinquency
 seen in mid-corporates is unlikely to repeat in large corporates.
- With pensions being well provided, opex growth over FY14-16F is likely to be lower vs. peers and with a larger mean reversion expected in asset quality, we expect SBI to deliver highest earnings growth in FY14-17F.
- Admittedly, SBI's valuation premium to peers does factor in some of the
 positives and we are taking a leap of faith with management on delivering
 better vs. peers in this cycle.

Catalysts: Slippage levels for SBI have been higher than peers over the past eight quarters – We expect a convergence in SBI's slippages vs. peers in 2HFY15 and that will be a strong stock catalyst.

Valuations: Assume coverage with a Buy and TP of INR3,050

Our TP of INR3,050 is based on 1.3x Mar-16F book after deducting for subsidiary value of INR235. We expect SBI's ROEs to inch up to \sim 15% and hence our valuation multiple (above book), in that context, prices in some premium for its liability franchise and, to some extent, our comfort with current management.

Closing price 3 July 2014	INR 2696
Potential upside	+13.1%

Anchor themes

We expect normalisation of its slippages to peer levels by 1HFY15F. Our comfort with SBI's management is one of the highest among PSUs.

Nomura vs consensus

Our FY15/16F earnings estimates are in line with consensus. We expect SBI's earnings growth to be the highest among peers as asset quality normalises.

SBI's slippage levels to converge with peers, better placed on restructuring

- Slippage levels to converge with peers: SBI's slippage levels over the past 2-3 years have been higher than peers', with higher NPAs of mid-corporate and agri loans. This indicates some aggressive underwriting in the mid corporate space by SBI, but we believe that in large corporate/infra SPV lending SBI's underwriting has been relatively better. Our analysis of INR4tn of risky large corporate/infra SPV debt indicates that SBI's exposure to these risky assets is similar to peers but the names are less risky especially in the infra space. We thus believe that SBI's incremental slippage levels are likely to converge with peers' over the next 2-3 quarters and this would be a likely stock trigger.
- Restructured book lower than peers SBI has been less aggressive on restructuring: SBI's restructured book (<5% of loans) is the lowest among peers, in part, due to lower SEB/Air India exposure and also because SBI was less aggressive on restructuring till mid-FY13. As mentioned in our sector report, we are concerned on the performance of accounts restructured over the past 2-3 years, and with a low percentage of the restructured book, relapse risk is lower for SBI on a relative basis.

Nomura | State Bank of India 8 July 2014

Operationally, we see some levers from lower opex growth – pensions/capital not a large constraint

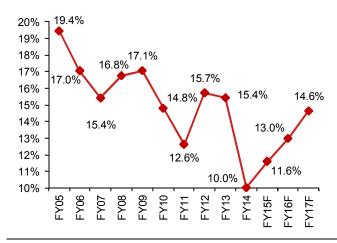

- Operationally, we expect SBI to report the highest EPS growth among our coverage PSUs (29% EPS growth over FY14-17F vs. 10-20% EPS growth for peers). This is likely to be driven by: 1) Lower pension provisioning as SBI looks relatively better placed on pensions after the INR24bn charge on life expectancy which it took in FY14F (2) Also due to lower credit costs which will be a common benefit across PSU banks and (3) Due to lower dilutions expected (high in the case of Union/BOI).
- From a profitability perspective, we expect SBI's ROEs to recover to ~15% from ~10% in FY14F. SBI's profitability will be comparable to BoB/PNB and higher than BOI/Union. While ROEs, on a comparable basis to BOB/PNB, do not warrant a large premium but we believe premium valuations will likely sustain given: (1) SBI's superior liability franchise, (2) Management quality and (3) Historic premium levels which have had a direct co-relation with market multiples (liquidity premium).

Nomura | State Bank of India 8 July 2014

Valuations: Assume coverage with a Buy rating and TP of INR3,050

Our TP of INR3,050 is based on 1.3x Mar-16F book after deducting for subsidiary value of INR235. We expect SBI's ROEs to inch up to ~15% which is just about equal to its Cost of Equity which justifies 1x book valuations. Our valuation multiple, in that context, factors in some premium for its superior liability franchise, and some of our comfort with current management.

Risks: Slower-than-expected recovery of corporate credit cycle will be a key risk.

Fig. 225: SBI's ROE expectations (standalone business)

Union Bank unbk.bo unbk in

EQUITY: FINANCIALS

Management strategy prudent but reflected in recent outperformance as well

Action: Profitability to improve but ROEs still lower than cost of equity

We initiate coverage on Union Bank with a Neutral rating and TP of INR240. We expect profitability for Union to improve over the next two years, driven by margin improvement, stability in opex growth and lower credit costs. Also, although capital remains a challenge, management's slower growth strategy seems prudent and reduces the capital raising urgency. But, despite the expected improvement, RORWAs will remain 20-25% lower than peers and, hence, we expect ROEs to remain constrained at 13-13.5%. Also, Union will still need ~40% dilution to get to 9% Tier-1 capital levels by FY17. The recent outperformance has narrowed the valuation gap vs. peers (with better profitability) and hence the risk-reward now does not look attractive to us.

- The positives: (1) Prudent strategy of slowing down RWA growth to <10%;
 (2) NIM bottoming out and core spreads likely to improve with better yields in corporate book; and (3) asset quality stabilising with 2H14 slippages ~20% lower than 1H14 and management expecting gradual improvement.
- The not-so-positives: (1) RORWAs/ROEs in FY16F will remain one of the lowest among PSUs despite the profitability improvement; and (2) ~40% expected dilution despite the slower growth targeted.

Catalysts: While its margin trajectory should improve from 1H15F and asset quality is expected to remain stable, continuous capital raising needs will likely constrain ROEs and valuations.

Valuations: Risk-reward not attractive after the recent outperformance

Our TP of INR240 is based on 0.85x Mar-16F book, marginally higher than our multiple for BOI and a 10-25% discount to PNB/BOB, after factoring in lower ROEs. While we are positive on Union's profitability potential, the recent outperformance has reduced Union's valuation gap with PNB and BOB to ~10-20% from 35-40% in the last six months, and hence some of the positives expected seem priced in.

Weak profitability in FY14 but we expect some improvement in FY15F

Union's profitability, as for most other PSUs, dipped in FY14 with +30bps contraction in margins, high opex growth (~21% y/y) and high credit costs. **We expect profitability to inch up from FY15F as: (1)** we factor in ~20bps improvement in margins over FY14-16F due to lower interest reversals, higher capital levels and marginally higher yields in their corporate portfolio as the bank will concentrate less on AAA corporates that borrow at just base rate; and **(2) opex growth** has inched up in FY14 due to higher wage settlement and pension provisioning. Our numbers indicate that Union is well provided on a relative basis on pensions and hence opex growth is likely to moderate.

Fig. 228: We expect profitability to improve...

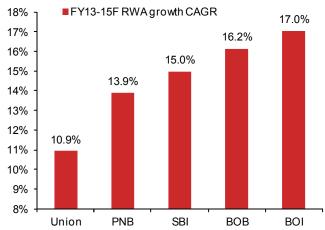

ROA improvement stronger, Capital raising to constrain ROEs

Source: Company data, Nomura estimates

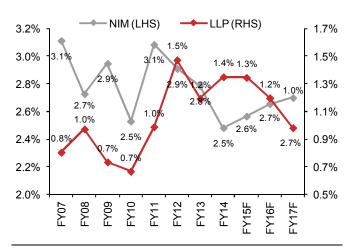

Fig. 230: Management strategy of slower RWA growth target prudent

Union will deliver slowest RWA growth in FY13-15F

Source: Company data, Nomura estimates

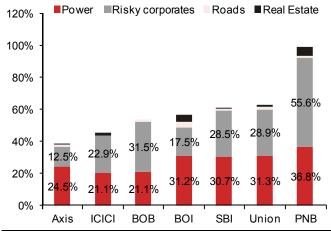

Fig. 229: ...with improvement in margins and lower credit costs

Source: Company data, Nomura estimates

Fig. 231: Large corporate/Infra SPV underwriting not most aggressive

Exposure to INR4trn of risky assets - % of net worth (FY14)

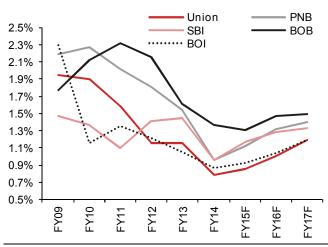

Source: Ministry of corporate affairs, Media sources, Nomura estimates

But ROEs are still among the lowest despite the expected improvement—now valuations have also caught up and capital calls will continue.

- Profitability will remain lower than peers: The above improvements in margins/opex coupled with lower credit costs should lead to a bounce-back in RORWAs from 0.8% to 1.2% but Union's RORWAs at 1.2% in FY16/17F will still remain inferior to RORWAs of peer PSU banks (20-25%) and hence our normalised ROE expectation for Union at 13.5% is lower than our ROE expectation for peers like BOB/PNB.
- Capital needs remain high despite slower growth: While we have been positively surprised by management's prudent strategy of slowing growth considering the bank's capital position unlike BOI, we still estimate that Union will need ~40% dilution in the next three years to bring its total Tier-1 capital level to +9% by FY17F.

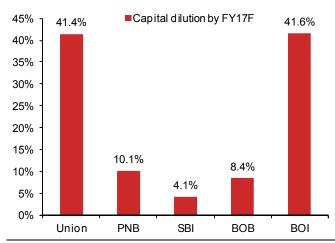

The recent outperformance of Union vs. PSU peers is factoring in some of the profitability improvement and prudent capital decisions by management, in our view.

Fig. 232: RORWAs to pick up but will be lower than peers'

Source: Company data, Nomura estimates

Fig. 233: Dilution need one of the highest inspite of slower RWA growth in FY14 and FY15F

Valuations: Risk-reward not attractive after the recent outperformance

Our TP of INR240 is based on 0.85x Mar-16F book, marginally higher than our multiple for BOI and \sim 10-20% discount to PNB/BOB factoring in lower ROEs. In our view, profitability is likely to improve from FY14 levels but will remain among the lowest and below its cost of equity, which will likely constrain valuations on an absolute basis. On a relative basis, the recent outperformance has reduced Union's valuation gap with PNB and BOB to \sim 10-20% from 35-40% in last six months, which we believe is fair considering the ROE differentials.

Risks: Stronger-than-expected pick-up in margins/profitability.

Fig. 234: ROEs to improve but still remain sub-optimal vs. cost of equity inspite of NIM/credit cost improvement

HDFC HDFC.NS HDFC IN

EQUITY: FINANCIALS

Stable performance to continue

Risk-reward evenly placed; we prefer HDFCB instead

Action: Steady play on increasing mortgage penetration

Following transfer of coverage of HDFC Limited, we rate the shares Neutral with a TP of INR1,050. We believe HDFC Limited is a stable play on the Indian mortgage market. Its market share has been gradually inching up from 13.5% in FY08-09 to ~15% now, and it is the market leader along with SBI (Buy). While most mortgage lenders including LICHF (Buy) have been facing spread challenges due to a volatile external funding environment, we believe HDFC's flexibility in borrowing has helped maintain margins in a relatively tight band. We are concerned about increasing competition in the individual mortgage market and that it will exert pressure on spreads; however, benign liquidity over the near-term and increased ability to leverage (lower risk weight for individual mortgages) should help offset any material ROE pressure. Some risks we see: 1) Past transactions indicate that HDFC's builder/ corporate book is well collateralised and ultimate loss on defaults is low, but there could be more volatility linked to builder/corporate cash flow and asset quality as disclosure requirements have been made more stringent for NBFCs in Jan '14 and this will be applied to HFCs as well. 2) With no prepayment charges allowed and lower swapping costs now for existing customers, we believe spread differences between new and old customers is likely to reduce. Catalysts: (1) Wholesale rates have stabilised and continued benign liquidity should aid margins (2) Disclosures relating to restructuring will lead to some volatility in asset quality (introduced for NBFCs in Jan-14). Valuations: Risk-reward evenly placed, We prefer HDFCB (Buy) Our INR1,050 TP implies 4x Mar-16F book for the mortgage business after deducting INR370 for its subsidiaries. We expect HDFC's core mortgage

business to generate ~27-28% ROEs and hence 4x valuation looks justified. But with current valuations already at 3.65x FY16 book, we believe the risk-reward is evenly placed. We prefer HDFC Bank instead, given its liability

Positives: Steady market share gains + Flexibility in funding + Higher leverage now

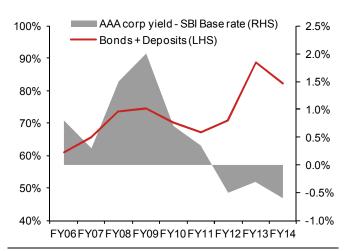

- Steady market share gains: HDFC Ltd has gained steady market share over the past 5-7 years, with very stable growth in its individual businesses. Unlike periods of hyper growth (ICICI in pre-FY08 days or SBI after the GFC), we note HDFC Ltd's growth has been more consistent and that helps preserve asset quality.
- Flexibility in funding: HDFC Limited has been able to maintain its lending spreads in a tight band given its funding and asset mix flexibility. During periods of easy liquidity, HDFC's share of bond + deposit funding increases, like it has increased over the past 2-3 years (except 2Q14 and 3Q14 when the RBI tightened liquidity). This funding flexibility has helped HDFC Limited to keep its margins in a tight band.
- Higher leverage in mortgage business now: The RBI/NHB revised their risk weights for individual and residential builder exposures lower. This has increased the ability of HDFC Limited to leverage up by ~20-25% and will aid ROEs even if pricing competition adds to spreads/ ROA pressures.

Some risks that we see:

- 1. Rising competition in mortgages: With limited growth avenues for banks in the corporate space, most banks, including PSUs, are targeting retail/SME growth and hence competition in mortgages is likely to remain high. Benign liquidity and easy wholesale funding rates provide near-term relief currently and over the longer run, we believe that the ability to leverage up due to lower risk weights will aid ROEs for HFCs despite lower spreads.
- 2. Spread gap between new and old customers to reduce: Generally, yields of existing customers do not keep pace with the yields offered to new customers in a falling rate environment, and hence spreads of existing customers are higher than new customers. But with prepayment charges being abolished for floating loans (Jun-12) and conversion fees also being reduced by HFCs, the swapping costs for old customers to new rates is lower and the gap between new and old customers will likely come off.
- **3. Disclosures relating to restructuring:** In Jan-14, the RBI mandated NBFCs to disclose details of restructuring from Mar-14, and overtime we believe this could be applied to HFCs (housing finance companies) as well. While past transactions indicate that HDFC's builder/ corporate book is well collateralised and ultimate loss on defaults is low, there could be more volatility linked to the builder/corporate book once disclosures are mandated for HFCs as well.

Valuations: Risk-reward evenly placed. We prefer HDFCB

Our TP of INR1,050 implies 4x Mar-16F book for the mortgage business after deducting INR370 for its subsidiaries. We expect HDFC Limited's core mortgage business to generate ~27-28% ROEs and hence 4x valuation looks justified. But with current valuations already at 3.6x FY16F book we believe the risk-reward is evenly placed. We prefer HDFC Bank, instead, given its liability franchise and better asset growth prospects.

Risks: 1) A very benign funding environment could lead to an increase in margins/spreads and that will be an upside risk; 2) while the builder book for HDFC Limited is well collateralised, there always remains a risk of downgrades/slippages and is hence a downside risk.

IDFC IDFC.NS IDFC IN

EQUITY: BANKS

Reforms to help but risks remain

Gas assets + long gestation for banking foray our key concerns

Action: Resume coverage with a Neutral rating and TP of INR140

While IDFC will be one of the key beneficiaries of the expected reforms and our benign liquidity expectations over the next one-two years, our optimism is affected by: **(1)** IDFC has the highest gas power exposure (~4% of loans and +20% of FY14 net worth) on which the outlook will remain uncertain till we see a material pick up in domestic gas production; **(2)** the long gestation road to profitability after migrating to a bank model, especially given IDFC has not had any presence/experience in retail liability/assets and NBFCs did not get any regulatory forbearance for priority sector and SLR/CRR obligations.

- A lot of positives for sure: Except for IDFC's gas exposure, the expected
 reforms will improve the asset quality outlooks of its coal/road assets and
 our analysis indicates that its underwriting in Infra has been relatively better.
 Also, a benign liquidity environment will reduce the pressure on margins
 that are underway due to the seasoning of the project book, in our view.
- Bank optionality less attractive without regulatory dispensation: We expect IDFC's ROEs to move down to ~10% as IDFC migrates to a bank structure and improvement back to ~15% ROE levels would take at least 4-5 years as: (1) NBFCs have not got any transition period for PSL and SLR/CRR compliance; and (2) IDFC's retail experience/presence is limited.

Catalysts: Any significant increase in domestic gas production Valuations: Undemanding but risks remain

Our TP of INR140 is based on 1.2x FY16F book, which we believe is reasonable for the banking optionality but with sub-optimal ROEs of 10-12% for the next 3-4 years. IDFC's floating provision of INR10bn provides ~30% cover on its gas exposure of +INR30bn and in the worst case, adjusting IDFC's book fully for its gas exposure implies a ~10% hit to its net worth and our TP then would imply a valuation multiple of 1.35x Mar-16F book.

Rating From Suspended	Neutral
Target price From N/A	INR 140
Closing price 3 July 2014	INR 133
Potential upside	+5.1%

Anchor themes

Current reforms will help but gas power risk is too high to ignore and execution risk in the banking foray is high.

Nomura vs consensus

Our FY15/16/17F earnings estimates are below consensus as we start factoring in a transformation to a bank.

Gas power exposure - No visible solution

As mentioned in our sector note, we believe that gas power plants will remain stressed as we do not see any visible improvement in this sub-sector of infra lending. While gas power based on imported LNG will be unviable, our oil and gas team's expectations on incremental domestic gas production is just ~10-12 mmscmd over the next two-three years and hence we believe the stress will remain high for gas power plants.

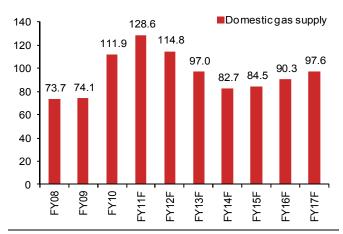

IDFC's exposure to domestic gas assets is +INR30bn, of which 75% is near fully completed gas plants waiting for gas and \sim 25% of plants are running plants but utilisation remains sub-par. While floating provisions of \sim INR10bn provides some comfort, it just covers IDFC's gas exposure by \sim 33% and hence write-offs could be large. Assuming IDFC's floating provisions are used for writing off its gas exposure, even then additional write-off would be \sim 10% of IDFC's FY16F net worth, we estimate.

Fig. 246: Meaningfully large gas exposure

Gas exposure details
Gas exposure INR 31bn
% of FY14 NW 20.6%
% of FY14 Exposure 4%
% of gas assets restructured ~50%
Floating provisions INR 10bn
Unprovided portion INR 21bn
% of FY16F NW 10%

Fig. 247: Domestic gas production unlikely to recover in a material way

Source: Nomura oil and gas team's estimates

Banking foray - Long gestation to above par profitability

While IDFC will take 12-18 months to start its banking foray and as management prepares to migrate the current book to the banking structure, loan growth in the interim is likely to get impacted. Over the next three-five years, we expect IDFC's profitability to trend lower as it will pay upfront some network cost and compliance with PSL and SRR/SLR requirements will impact margins. We await a clear business plan by management to judge the initial cost strain for IDFC but our sensitivity analysis shows that ROEs may recover back to 12-15% levels by FY19-20F (after five years of banking operations).

Fig. 248: Banking foray Timeline (as per management)

Step 1	IDFC Promoter Company has to be a domestic company – FII+ FDI stake has to be brought below 50% - Currently this is between 53-54% - Will launch a offer for domestic investors in next few months and this will help comply with FII+FDI stake below 50%
Step 2	Creation of additional subsidiaries plus Creating an IDF NBFC – Transfer all eligible assets to this entity before creation of the NOHFC – Only Rs15-20bn of assets could get transferred (no SLR/CRR on this).
Step 3	Create a NOHFC – It will have stake in AMC, PE, Bank, Capital market business and create IDF
Step 4	Creation of the bank - Options: (1) De-merger of the bank – Listed from day one or (2) Bank will be as a subsidiary and listed 3 years from now

Source: Company concall 4QFY14

Fig. 249: Our sensitivity for IDFC's expected ROEs in five years

FY20 Exit ROE tree

ROEs in FY20	10.51%	12.39%	14.74%

Source: Nomura estimates

Valuations: Reasonable in spite of the recent re-rating

Our TP of INR140 is based on 1.2x FY16F book (BVPS: INR119), which we believe is reasonable for the banking optionality but with sub-optimal ROE estimates of 10-12% for the next three-four years. IDFC's floating provision of INR10bn provides \sim 30% cover on its gas exposure of +INR30bn and adjusting for the uncovered gas exposure, IDFC's FY16F book would be \sim 10% lower and our TP then would imply a valuation multiple of 1.35x Mar-16 book.

Risks: (1) An upside risk is if domestic gas production improves faster than expected. (2) Downside risks - any miss on the execution on the banking foray + slower improvement in macros/capex cycle implying stress from ex-gas exposure for IDFC.

NOMURA

LIC Housing Finance LICH.NS LICHF IN

EQUITY: FINANCIALS

Competition will remain tough; we take a tactical call on liquidity

Action: Steady ROEs now

Following the transfer of coverage, we have a Buy rating for LIC housing Finance (LICHF) with a TP of INR370. Low mortgage penetration will continue to drive the medium-term growth in mortgages and LICHF remains well positioned, in our view. Increasing competition remains our concern and spreads in the individual mortgage business are unlikely to go back to FY07-11 levels and hence ROAs for LICHF will be structurally lower. But, lower risk weights by NHB has increased the potential leverage in the mortgage business and hence with ROAs of 1.5% currently, we expect LICHF to generate 18-19% ROE over FY16/17F, assuming benign liquidity.

- The change in risk weights to mortgages (Jun-13) has raised the potential leverage in individual mortgages to 15-16x from 12-13x earlier (with tier-1 of 12%) - ROEs will, thus, be comparable to past trends with lower ROAs.
- Banks will increasingly focus on low risk retail asset growth and hence competition is likely to remain high. But we are sanguine on stable liquidity/rates (stable wholesale funding cost) and that would support spreads. Also, builder book is unlikely to dip further and any material increase in builder exposure will add to our spread estimates. (We factor in spreads to increase from 1.28% in FY14 to 1.35-1.4% by FY16/17F).

Catalysts: (1) Stability in funding in wholesale cost of funds; (2) recoveries in corporate NPAs which are currently being auctioned. Valuations: Undemanding for structural growth + respectable ROEs LICHF currently trades at ~1.6x Mar-16F book which we believe is undemanding for a structural growth of ~17-18% at least, with respectable ROEs. Our TP of INR370 implies 1.85x Mar-16F book. While visibility on growth could provide scope for higher multiples than implied by our TP, we believe competition will constraint mortgage spreads and though current liquidity/wholesale funding costs are benign, we cannot extrapolate the same.

Global Markets Research

8 July 2014

Rating From Suspended	Buy
Target price From N/A	INR 370
Closing price 3 July 2014	INR 324
Potential upside	+14.2%

Anchor themes

Competition will not ease in the near-term and that will contrain margins for HFCs. Our positive view is a tactical call on liquidity.

Nomura vs consensus

Our FY15F/FY16F earnings estimates are in line with consensus.

Competition from banks will remain high

Banks are now refocusing on retail/mortgage/SME growth as growth avenues in large corporate/Infra have dried up. After losing market share in mortgages to HFCs over FY08-13, mortgages growth for banks has picked up from mid-FY13 with ~20% growth y/y over the past 18-24 months and this trend will likely continue till corporate credit demand picks up in a meaningful manner — this will ensure that competition in individual mortgages remains high for HFCs, in our view.

Fig. 253: Banks lost market share to HFCs over FY08-13 But their market share is stabilising now

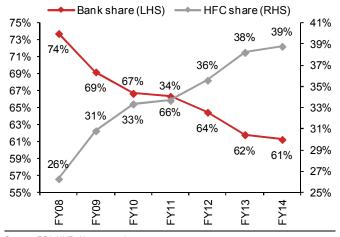

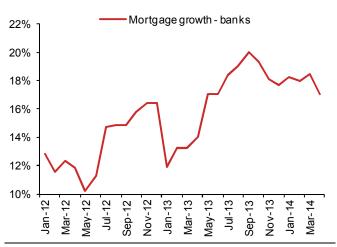

Fig. 254: But mortgage growth for banks picking up now

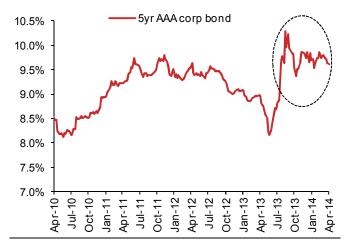

Source: RBI, Nomura research

Source: RBI, NHB, Nomura estimates

Liquidity tightness and wholesale cost of funds have eased; we do not extrapolate this into our numbers

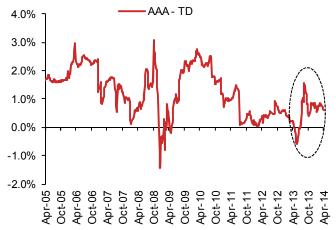

Liquidity has eased in the past three-six months with significant foreign inflows and hence AAA funding rates have come off to 9.1-9.2%. With mortgage rates at 10.25%, this implies incremental spreads of +150bps vs. average FY14 spreads of ~125-130bps. Though wholesale funding rates have remained volatile in the past and differentials with term deposits at low points, we do not think that it will be prudent to extrapolate this trend. But certainly, easier liquidity will certainly aid margins for HFCs, in our view. One of the longer-term margin levers could be an increase in builder book share (which yields ~300-400bps higher than the individual book). We do not expect further dip in the builder book but a material build up is also not expected in the near term.

The change in risk weights has increased the inherent leverage in the mortgage business

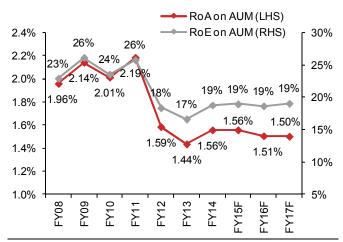

RBI and NHB have changed the risk weight in Jun-13 by relaxing the risk weight/LTVs in most categories. Previously, RBI had tightened mortgage risk weights in Dec-10. The recent changes normalise the previous tightening and effectively increases the inherent leverage in the individual mortgage book from 12-13x to 15-16x (even assuming tier-1 capital of 12% vs. a 6% requirement). Thus, while margins and ROAs are unlikely to move up to pre-FY11 levels unless the mix changes dramatically for LICHF, higher leverage will lead to respectable ROEs, in our view.

Fig. 261: ROAs lower but ROEs still relatively comparable

Valuation, TP and risks

LICHF currently trades at \sim 1.6x Mar-16 book (BVPS: INR199), which we believe is undemanding for a structural growth of \sim 17-18% at least, with respectable ROEs. Our TP of INR370 implies 1.85x Mar-16 book. While visibility on growth could provide scope for a higher multiple than implied by our TP, we believe competition will constraint mortgage spreads and though current liquidity/wholesale funding costs are benign, we cannot extrapolate the same.

Risks: A significant change in the liquidity outlook could impact margins and LICHF's profitability - we assume liquidity to remain benign.

Fig. 262: ROEs remain respectable in spite of lower margins/ROAs

NOMURA

Mahindra & Mahindra Financial Services MMFS.NS MMFS.NS

EQUITY: FINANCIALS

Profitability normalising + monsoon risks

Longer-term growth prospects fine, but near-term cyclical growth and asset quality risks high

Action: Too many cyclical risks under way

Following transfer of coverage of Mahindra Finance (MMFS) we rate the shares Neutral, with a TP of INR290. While MMFS is one of the better plays on rural buoyancy from a medium- to longer-term perspective, we are seeing near-term growth and asset quality challenges, and with the monsoons being a non-starter so far, risk of the cyclical downturn extending has increased. Disbursement growth is likely to remain negative in 1H15F and we thus expect <15% AUM growth for FY15F and a weak monsoon could likely defer a recovery in asset quality.

- FY14 asset quality was impacted owing to issues related to specific geographies. With lower MSP increases and a weak start to the monsoons, rural buoyancy will be impacted, we think. We expect credit costs to increase to ~200bp in FY15/16F vs. 120bp in FY11-13.
- Profitability has normalised from ~22-23% ROEs in FY11-13 to 18% in FY14 and we expect ROEs to remain ~18-19% till FY16F. Investors should thus look at valuations in that context.

Catalysts: We would prefer to wait for risks on monsoons to play out before we get incrementally positive on MMFS - Though non-agricultural use for MMFS customers has increased, underlying asset quality still remains anchored to rural buoyancy.

Valuations: Not enticing enough to ignore near-term risks

MMFS currently trades at 2.1x Mar-16F book after adjusting for INR22 for its subsidiaries (rural housing + insurance brokers). At current valuations, we believe valuations are not enticing enough to ignore risks to asset quality and growth in FY15F. While lower rates should be margin accretive given fixed rate book, food inflation risks will only delay rate cut expectations. Our TP of INR290 implies 2.25x FY16F book (BVPS: INR118).

Global Markets Research

8 July 2014

Rating From Suspended	Neutral
Target price From N/A	INR 290
Closing price 3 July 2014	INR 274
Potential upside	+5.7%

Anchor themes

Remains a good rural play, but too many cyclical headwinds.

Nomura vs consensus

Our earnings estimates for FY15/16F are below consensus, as we expect credit costs and growth to surprise negatively in the near-term.

na

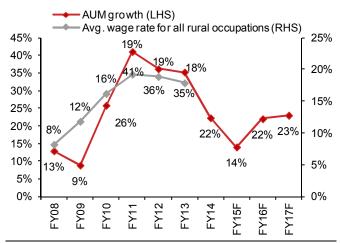

Too many cyclical risks

MMFS's asset quality deteriorated in FY14 despite good monsoons owing to an overall slowdown and, more importantly, collection issues in Madhya Pradesh and most of the southern states. Concerted efforts aided collection in most states, except Tamil Nadu in 4QFY14, but management remains cautious on the overall asset quality trend.

With a weak start to the monsoons this year, risks to asset quality have only increased and low increases in Agri MSPs (minimum support price) are unlikely to aid rural buoyancy. Over the past few years, there has been a clear correlation of MMFS growth and asset quality with rural buoyancy, which we think could falter in FY15F.

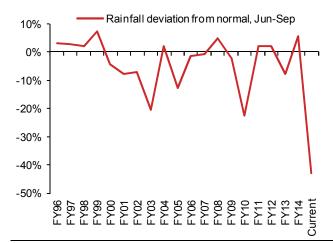

We thus factor in gross NPAs to increase to 5.5% in FY16F from 4.7% in FY14, and credit costs to inch up to \sim 200bp in FY15/16F from 120bp in FY11-13 and \sim 175bp in FY14.

Source: IMD, Nomura research

Fig. 266: MSP price hikes are coming off (INR)

Source: Business beacon

Fig. 268: We expect credit costs to continue to inch up

Valuations are not cheap either

MMFS currently trades at 2.1x Mar-16F book after adjusting for INR22 for its subsidiaries (rural housing + insurance brokers). Investors will also need to evaluate valuations from the context of normalising ROEs (down from 22-23% in FY11-13 to our expected ~18-19% in FY14-16F) and slower profit growth (~30% EPS growth in FY11-13 to ~13% EPS growth in FY14-16F after a year of flat EPS in FY14). At current valuations, we believe valuations are not enticing enough to ignore risks to asset quality and growth in FY15F. While lower rates should be margin accretive given fixed rate book, food inflation risks will only delay rate cut expectations. Our TP of INR290 implies 2.25x FY16F book (BVPS: INR118).

Risks: A pick-up in monsoons from here, such that it covers up for the June shortfall.

CV cycle to turn, but too much priced in

Growth and profitability are unlikely to reach levels seen in the last cycle

Action: We expect a turn in the CV cycle, but see too much priced in

We resume coverage of Shriram (SHTF) with target price of INR880 and a Reduce call. Freight rates have risen since October 2013, capacity utilisation is bottoming out and the macro outlook is improving, causing us to factor in a turn in the commercial vehicle cycle in FY16F. However, the current valuation of 1.9x Mar-16F book already factors in much of the expected improvement, in our view. While peak multiples in the previous cycle were much higher, we also doubt that profitability and growth will match the previous cycle's levels.

- We factor in an FY16F recovery in the CV cycle: A ~15% increase in freight rates since October 2013 has helped truckers' profitability, while a better macro outlook should lift freight utilisation rates over coming quarters. We expect AUM growth to rebound to ~17% in FY16F, from 9% in FY15F, and credit costs to fall by ~30bp over the next two years.
- But profitability is unlikely to match the previous cycle: Lending spreads over the last three years have narrowed significantly, despite lower leverage, and the asset mix is unlikely to be yield-accretive, in our view. Potential leverage has fallen to 7-8x from 9-11x in FY07-10 on changes in capital charges for securitisations. We expect a 15.5-18.0% ROE over FY15-17F (25%-plus in FY07-11), and believe valuations should be compared in that context.

Catalysts: Asset quality will likely recover over six months, but growth is likely to disappoint in the near term – wait for better valuation.

Valuation: Pricing in some recovery

Our TP of INR880 is based on 1.75x Mar-16F book after adjusting for INR44 of subsidiary valuation (equipment finance + Auto Mall). SHTF's growth rate is likely to be lower than peers' over the next two to three years despite the CV recovery, with profitability unlikely to return to previous-cycle highs; we do not believe that benchmarking to historical valuations is justified.

na

We expect a turn in the CV cycle in FY16F

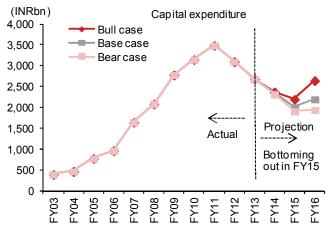

We believe the commercial vehicle (CV) cycle will bottom out in 1H FY15F: 1) Freight rates have consistently risen up over the last nine months, more than compensating for higher diesel prices; 2) truckers' profitability has improved significantly since October 2013; 3) The Indian Foundation for Transport Research and Training (IFTRT) suggests that freight utilization has begun to improve, especially of vehicles with national permits, where there size of the fleet available has shrunk. With an uptick in economic activity, we believe utilisation will improve further – hence our belief in a CV cycle revival by 2H FY15F. Our auto analyst, Kapil Singh, expects heavy CV (HCV) sales to improve by ~10-15% in FY15F, from negative growth YTD. We therefore factor in material growth in AUM for SHTF of 17% y-y, along with lower credit costs of ~170bp for FY16F (from 200bp in FY15F).

Fig. 275: Higher growth and lower credit costs in FY16/17F

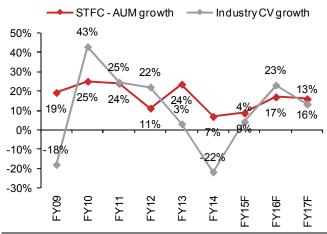

Profitability and growth unlikely to match the previous cycle

While we factor in a CV cycle recovery, profitability for Shriram is unlikely to match pre-FY12F levels given:

1) Risk-adjusted margins (adjusted for capital levels) have come off by ~150bp over the past four to five years due to a combination of asset mix and higher funding costs. Lower rates over the next two years and a shedding of the excess liquidity on the balance sheet should lead to some margin improvement (we expect a 30bp improvement over the next two to three years). However, we believe it is unlikely that margins will recover meaningfully from a mix perspective given that once the growth cycle starts; we would expect new CV credit offtake to outstrip that of used CVs.

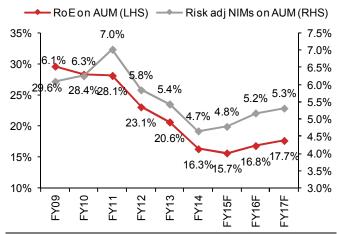

2) With changes in capital charges for securitisations, potential leverage falls to ~7-8x, from 9-11x in FY07-10. We expect a 15.5-18% ROE over FY15-17F, compared with an ROE of 25%-plus in FY07-11.

Fig. 276: Growth pick-up to be lower given SHTF's size

Source: Company data, Nomura estimates

Fig. 277: Risk-adjusted margins much lower; lower leverage makes ROEs incomparable

Source: Company data, Nomura estimates

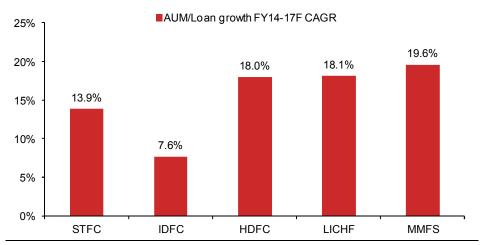

Valuations already pricing in a recovery

Our TP of INR880 is based on 1.8x Mar-16F book after adjusting for INR44 of subsidiary valuation (equipment finance + Auto Mall). Thus, with the recent outperformance, we believe risk-reward is no longer as attractive. SHTF's growth rate is likely to be lower than its NBFC peers' over the next two to three years, despite the CV recovery, and we do not expect profitability to be comparable to the previous cycle. As such, we believe that any benchmarking to historical valuations is unjustified. Risks include a faster-than-expected recovery in CV demand and asset quality.

Fig. 278: Valuation has to be considered in conjunction with significantly lower ROE than the previous cycle

ROE Decomposition (on AUM)	FY09	FY10	FY11	FY12	FY13	FY14	FY15F	FY16F	FY17F

Axis Bank: Valuation Methodology Our TP of INR2,300 is based on 2.15x FY16F book. This is higher than the multiples at which Axis has traded in the past 2-3 years but lower than FY04-07 multiples. While growth over the next 2-3 years is likely to be lower than the last cycle, ROAs are much more superior (1.75% vs. 1.2% in FY04-07) and B/S and P&L granularity makes

the business model less risky. We, thus, expect Axis Bank to close the valuation gap with private peers as risks surrounding large corporate asset quality ebb. MSCI India is the benchmark index for the stock.

Axis Bank: Risks that may impede the achievement of the target price (1) A slower-than-expected recovery in corporate capex execution; and (2) the indirect impact of weak monsoons – higher rates.

Bank of Baroda: Valuation Methodology Our TP of INR1025 implies 1.1x Mar-16F book based on our normalized ROE assumption of 15.5% and is 15% higher than our PNB's target multiple given lower asset quality risk/better under writing. While an impending transition will remain a concern till transition, the recent underperformance and better historic underwriting provides us some comfort. The benchmark index for this stock is MSCI India.

Bank of Baroda: Risks that may impede the achievement of the target price Risks: (1) Any near-term asset quality volatility due to a transition, and (2) slower-than-expected pick-up in economic activity.

Bank of India: Valuation Methodology Our TP of INR330 is based on 0.8x Mar-16F book which is marginally lower than our target multiple for Union (targeting slower growth) and at a 15-25% discount to PNB/BOB factoring in lower normalised ROEs (13.5% vs. 15-16% for PNB/BOB) and expected capital raising challenges. While asset quality and some dilution-linked NIM improvement will move up ROAs from 0.55% in FY14 to +0.70% in FY16/17F, ROEs will remain constrained at 13.5% due to lower leverage; an intended consolidation could push up valuations though. The benchmark index for this stock is MSCI India.

Bank of India: Risks that may impede the achievement of the target price Continued aggression on growth by management is a downside risk.

HDFC: Valuation Methodology Our TP of INR1,050 implies 4x Mar-16F book for the mortgage business after deducting for INR370 for its subsidiaries. We expect HDFC's core mortgage business to generate ~27-28% ROEs and hence 4x valuation looks justified. But with current valuations already at 3.6x FY16 book we believe risk-reward is evenly placed. We prefer HDFC Bank instead given its liability franchise and better asset growth prospects. The benchmark index for this stock is MSCI India.

HDFC: Risks that may impede the achievement of the target price (1) Very benign funding environment could lead to increase in margins/spreads and that will be a upside risk (2) while the builder book for HDFC Limited is well collateralised, there always will remain risk of downgrades/slippages and is a downside risk.

HDFC Bank: Valuation Methodology Our TP of INR950 is based on 3.75x Mar-16F book (3.4x Mar-16F book assuming an INR80bn dilution). The reasons for the recent underperformance have been rather technical and we believe premium valuations will be sustained as not only do we expect HDFCB's earnings to be the most resilient in the space, but its underlying metrics remain superior to those of its peers as well. Its valuation gap with peer retail banks (Kotak and IIB) is now low at 10-20% on FY16F P/B and less than 10% on FY16F P/E. The benchmark index for this stock is MSCI India.

HDFC Bank: Risks that may impede the achievement of the target price 1) A slower-than-expected pick-up in retail credit growth; and 2) any significant change in underwriting standards of retail loans.

ICICI Bank: Valuation Methodology Our TP of INR1,650 is based on 2.1x Mar-16F book for the lending business and INR 272 of subsidiary valuations. As ICICI closes the ROE gap with peers as the B/S leverage up and asset quality concerns on large corporate ebb, we would expect their valuation gap to narrow vs. retail peers and current valuations at 1.75x Mar-16F book look undemanding. The benchmark index for this stock is MSCI India.

ICICI Bank: Risks that may impede the achievement of the target price (1) Some lumpy asset quality risks – legacy gas assets and overseas coal assets funded by ICICI, and (2) slower-than-expected turnaround of GDP growth.

IDFC: Valuation Methodology Our TP of INR140 is based on 1.2x FY16F book (BVPS: INR119), which we believe is reasonable for the banking optionality but with sub-optimal ROE estimates of 10-12% for the next three-four years. IDFC's floating provision of INR10bn provides ~30% cover on its gas exposure of +INR30bn and adjusting for the uncovered gas exposure, IDFC's FY16F book would be ~10% lower and our TP then would imply a valuation multiple of 1.35x Mar-16 book. MSCI India is the benchmark index for the stock.

IDFC: Risks that may impede the achievement of the target price (1) An upside risk is if domestic gas production improves faster than expected. (2) Downside risks - any miss on execution on the banking foray + slower improvement in macros/capex cycle implying stress from ex-gas exposure for IDFC.

Indusind Bank: Valuation Methodology Our TP of INR630 implies ~2.8x Mar-16F book. While profitability and profit growth for IIB are best in class, IIB's earnings will be a little more cyclical than HDFCB/Kotak given its liability/asset mix and high loan growth. Our TP implies 25%/10% discounts on P/B multiples of HDFCB/Kotak which we believe is fair. If some of the expected improvements materialise over time, then we believe that the discount to some of the defensive peers may come off. MSCI India is the benchmark index for this stock.

Indusind Bank: Risks that may impede the achievement of the target price A slower-than-expected recovery in the CV cycle and higher-than-expected credit costs.

Kotak Mahindra Bank: Valuation Methodology Kotak Bank's current valuations at ~2.9x Mar-15F book after adjusting for INR140 of valuations for its flow business are certainly expensive. While asset quality is likely to hold up the best as management has been very conservative in growing in the past 18 months, we see valuations stretched on a relative basis with HDFCB (Kotak just at a 10% discount on FY16F P/B and ~20% premium on FY16F P/E). Premium valuations could sustain given: (1) high RORWAs, (2) continuity of top management and investor comfort with its conservative approach to asset quality; and (3) relatively strong leverage to an upcycle as well. We value Kotak Bank on sum-of-the-parts basis with a TP of INR920. We value all the subsidiaries (ex-Kotak Prime) at INR140. Our residual TP for Kotak implies a ~3x Mar-16F book for its lending business. MSCI India is the benchmark index for this stock.

Kotak Mahindra Bank: Risks that may impede the achievement of the target price (1) Downside risks: Slower-than-expected loan growth will delay the leveraging up process. (2) Upside: A better-than-expected turn in profitability of capital market businesses and higher-than-expected gains from stressed asset book.

LIC Housing Finance: Valuation Methodology LICHF currently trades at ~1.6x Mar-16F book which we believe is undemanding for a structural growth of ~17-18% at least, and respectable ROEs. Our TP of INR370 implies 1.85x Mar-16F book. While visibility on growth could provide scope for a higher multiple than implied by our TP, we believe competition will constraint mortgage spreads and though current liquidity/wholesale funding costs are benign, we cannot extrapolate the same. MSCI India is the benchmark for this stock.

LIC Housing Finance: Risks that may impede the achievement of the target price A significant change in the liquidity outlook could impact margins and LICHF's profitability - we assume liquidity to remain benign.

Mahindra & Mahindra Financial Services: Valuation Methodology MMFS currently trades at 2.2x Mar-16F book after adjusting for INR22 for its subsidiaries (rural housing + insurance brokers). Investors will also need to evaluate valuations from a context of normalising ROEs (down from 22-23% in FY11-13 to ~18-19% expected in FY14-16F) and slower profit growth (~30% EPS growth in FY11-13 to ~13% EPS growth in FY14-16F after a yr of flat EPS in FY14). At current valuations, we believe valuations are not enticing enough to ignore risks to asset quality and growth in FY15F. While lower rates will be margin accretive given fixed rate book, food inflation risks will only delay the rate cut expectations. Our TP of INR290 implies 2.25x FY16F book. The benchmark index for this stock is MSCI India.

Mahindra & Mahindra Financial Services: Risks that may impede the achievement of the target price A pick-up in monsoons from here, such that it covers up for the June shortfall.

Punjab National Bank: Valuation Methodology Our TP of INR925 is based on 0.8x Mar-16F book (0.9x Mar-16F adjusted book) and implies a discount of 15% to our valuation multiple for BOB (better asset quality + higher ROEs). Recent outperformance has narrowed PNB's valuation discount to peers significantly (from 30-40% to 10-20%) and hence at current valuations we prefer SBI/BOB among the PSUs. While PNB's ROEs are comparable to BOB/SBI, we believe the same multiple is not warranted given the higher risk inherent in PNB's higher-yield/higher-credit cost model. The benchmark index for this stock is MSCI India.

Punjab National Bank: Risks that may impede the achievement of the target price A larger-than-expected economic recovery, such that even inferior businesses turn around quickly.

State Bank of India: Valuation Methodology Our TP of INR3,050 is based on 1.3x Mar-16 book after deducting for subsidiary value of INR235. We expect SBI's ROEs to inch up to ~15% which is just about equal to its Cost of Equity which justifies 1x

book valuations. Our valuation multiple, in that context, factors in some premium for its superior liability franchise, and some of our comfort with current management. The benchmark index for this stock is MSCI India.

State Bank of India: Risks that may impede the achievement of the target price Slower-than-expected recovery of corporate credit cycle will be a key risk.

Shriram Transport Finance: Valuation Methodology Our TP of INR880 is based on 1.8x Mar-16F book after adjusting for INR44 of subsidiary valuation (equipment finance + Auto Mall). MSCI India is the benchmark for this stock.

Shriram Transport Finance: Risks that may impede the achievement of the target price Faster-than-expected recovery in CV demand and asset quality.

Union Bank: Valuation Methodology Our TP of INR240 is based on 0.85x Mar-16F book, marginally higher than our multiple for BOI and ~10-20% discount to PNB/BOB factoring in lower ROEs. In our view, profitability is likely to improve from FY14 levels but will remain among the lowest and below its cost of equity, which will likely constrain valuations on an absolute basis. On a relative basis, the recent outperformance has reduced Union's valuation gap with PNB and BOB to ~10-20% from 35-40% in last six months, which we believe is fair considering the ROE differentials. MSCI India is the benchmark index for this stock.

Union Bank: Risks that may impede the achievement of the target price Stronger-than-expected pick-up in margins/profitability.

Yes Bank: Valuation Methodology Our TP of INR620 implies 1.9x Mar-16F book which is ~10% discount to our multiple for Axis/ICICI. While growth outcomes over FY14-17F would be higher for Yes Bank, its assets/liabilities need to get a lot more granular vs. Axis/ICICI and hence the discount in target multiple. Yes Bank trades at 1.75x Mar-16F book which is similar to what ICICI/Axis trade at currently and hence, at similar valuations, we prefer Axis/ICICI. The benchmark index for this stock is MSCI India.

Yes Bank: Risks that may impede the achievement of the target price Lower-than-expected NIM expansion and loan growth, sharp deterioration in asset quality and slower-than-expected SA growth.

As at 30 June 2014. *The Nomura Group as defined in the Disclaimer section at the end of this report.

Explanation of Nomura's equity research rating system in Europe, Middle East and Africa, US and Latin America, and Japan and Asia ex-Japan from 21 October 2013

The rating system is a relative system, indicating expected performance against a specific benchmark identified for each individual stock, subject to limited management discretion. An analyst's target price is an assessment of the current intrinsic fair value of the stock based on an appropriate valuation methodology determined by the analyst. Valuation methodologies include, but are not limited to, discounted cash flow analysis, expected return on equity and multiple analysis. Analysts may also indicate expected absolute upside/downside relative to the stated target price, defined as (target price - current price)/current price.

STOCKS

A rating of 'Buy', indicates that the analyst expects the stock to outperform the Benchmark over the next 12 months. A rating of 'Neutral', indicates that the analyst expects the stock to perform in line with the Benchmark over the next 12 months. A rating of 'Reduce', indicates that the analyst expects the stock to underperform the Benchmark over the next 12 months. A rating of 'Suspended', indicates that the rating, target price and estimates have been suspended temporarily to comply with applicable regulations and/or firm policies. Securities and/or companies that are labelled as 'Not rated' or shown as 'No rating' are not in regular research coverage. Investors should not expect continuing or additional information from Nomura relating to such securities and/or companies. Benchmarks are as follows: United States/Europe/Asia ex-Japan: please see valuation methodologies for explanations of relevant benchmarks for stocks, which can be accessed at: http://go.nomuranow.com/research/globalresearchportal/pages/disclosures/disclosures.aspx; Global Emerging Markets (ex-Asia): MSCI Emerging Markets ex-Asia, unless otherwise stated in the valuation methodology; Japan: Russell/Nomura Large Cap.

SECTORS

A 'Bullish' stance, indicates that the analyst expects the sector to outperform the Benchmark during the next 12 months. A 'Neutral' stance, indicates that the analyst expects the sector to perform in line with the Benchmark during the next 12 months. A 'Bearish' stance, indicates that the analyst expects the sector to underperform the Benchmark during the next 12 months. Sectors that are labelled as 'Not rated' or shown as 'N/A' are not assigned ratings. Benchmarks are as follows: United States: S&P 500; Europe: Dow Jones STOXX 600; Global Emerging Markets (ex-Asia): MSCI Emerging Markets ex-Asia. Japan/Asia ex-Japan: Sector ratings are not assigned.

Explanation of Nomura's equity research rating system in Japan and Asia ex-Japan prior to 21 October 2013 STOCKS

Stock recommendations are based on absolute valuation upside (downside), which is defined as (Target Price - Current Price) / Current Price, subject to limited management discretion. In most cases, the Target Price will equal the analyst's 12-month intrinsic valuation of the stock, based on an appropriate valuation methodology such as discounted cash flow, multiple analysis, etc. A 'Buy' recommendation indicates that potential upside is 15% or more. A 'Neutral' recommendation indicates that potential upside is less than 15% or downside is less than 5%. A 'Reduce' recommendation indicates that potential downside is 5% or more. A rating of 'Suspended' indicates that the rating and target price have been suspended temporarily to comply with applicable regulations and/or firm policies in certain circumstances including when Nomura is acting in an advisory capacity in a merger or strategic transaction involving the subject company. Securities and/or companies that are labelled as 'Not rated' or shown as 'No rating' are not in regular research coverage of the Nomura entity identified in the top banner. Investors should not expect continuing or additional information from Nomura relating to such securities and/or companies.

SECTORS

A 'Bullish' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a positive absolute recommendation. A 'Neutral' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a neutral absolute recommendation. A 'Bearish' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a negative absolute recommendation.

Target Price

A Target Price, if discussed, reflects in part the analyst's estimates for the company's earnings. The achievement of any target price may be impeded by general market and macroeconomic trends, and by other risks related to the company or the market, and may not occur if the company's earnings differ from estimates.
