

Value Retailing + Execution Finesse = DMART

We are initiating coverage on Avenue Supermart Limited (DMART) with a BUY recommendation and a Target Price of Rs 3,100 which implies 16% upside from the current levels. DMART's strong execution capability with a stellar execution track record, places it on top of the list among all Food & Grocery (F&G) retail players. Tested business model with consistency in providing highest discounts on a profitable basis helps DMART to outperform competition. The company has ramped up its store expansion and its cluster based expansion aids in trimming costs and supporting margins. DMART has delivered strong growth with a CAGR of ~36%/40%/47% in Revenue/EBITDA/PAT respectively, over FY12-20. We expect the company to deliver healthy growth over FY20-23E with a CAGR of ~23%/24%/25% in Revenue/EBITDA/PAT respectively on account of 1) Value retailing (consistency in providing discounts) remains the primary moat 2) Low cost of operation (majority of the stores are company owned) 3) Continuous store expansion through a cluster based approach 4) healthy SSSG and balance sheet with no liquidity constraints, 5) Superior Return ratios despite heavy investment in assets. At CMP, the stock trades at 41x EV/EBITDA on FY23E earnings (3year avg EV/EBITDA is 54x), which we believe is attractive given the strong revenue growth over FY20-23E with large headroom for expansion going ahead.

OUR INVESTMENT THESIS IS BASED ON THE FOLLOWING PREMISES

Value retailing remains the primary moat

DMART's strategy is to offer lower prices on products on a daily basis (EDPL/EDLC), rather occasionally. The company targets lower-middle, middle, and aspiring upper-middle-income consumers for whom value for money plays an important role. Despite larger revenue dominated by food and grocery business (52% of revenue) coupled with thin margins (8.6% EBITDA margin), DMART provides lowest cost offerings to customers consistently, in turn gaining loyalty, a key factor for driving footfalls. DMART has maintained the lowest execution cost aided by a cluster-based expansion strategy, lowest operation cost among peers by outsourcing ~80% employees and minimal rental cost (owns the majority of stores) and optimum working capital with the timely payment of payables reaping higher cash discounts. With a higher share of food and grocery in revenue, it has witnessed a higher number of bill cuts per year, which has risen at a CAGR of ~25% over FY13-20 to 20.1 cr cuts suggesting good new customer traction. Average bill size has also expanded significantly over the same period. Consequently, DMART has been able to drive improvement in Revenue per square feet consistently for the last few years from Rs. 26,388 in FY15 to Rs. 35,647 in FY19 with FY20 impacted by COVID.

Large headroom for expansion with focus on D-Mart Ready

The company has a strong presence in southern and western regions which majorly contribute to the revenues. DMART has established an extensive cluster-based distribution network comprising of 220 stores and ~225 DMART Ready stores as of Q2FY21. The cluster-based approach has reduced the distribution and inventory cost for the company in turn bettering margins. We expect the company to add ~100 stores till FY23E with ~80% of the stores in the existing clusters and ~20% would be new clusters for which it successfully raised Rs. 4,000cr through QIP in FY20.

Strong Balance Sheet and Return Ratios

Despite capital intensive strategy, the company has maintained high ROE and ROCE in comparison to the industry. The company has maintained healthy operating cash flows, asset turns (~5x) and EBITDA Margins over the years making it a capital efficient business. It has sustained an average ROE and post tax ROCE at 15%/+13% respectively which are expected to be maintained going forward given strong execution capabilities. Balance sheet remains strong and comfortable with Net Debt/EBITDA and Net Debt/Equity of -0.05x/ -0.01x respectively in FY20.

Robust long-term growth outlook – Initiate with BUY

Initiate coverage with BUY rating on the stock and a target price of Rs 3100 (48x FY23E EV/EBITDA). We believe DMART is well placed in the domestic retail industry given its strong execution capabilities, disciplined EDLP/EDLC strategy, lower cost of operation and streamlined distribution network aiding DMART to penetrate in to newer markets. At CMP, stock trades at 41x EV/EBITDA which we believe is attractive given the strong revenue growth and large headroom for expansion going ahead.

Key Investment Arguments

Boringly consistent across all odds

DMART's long gestation period for expansion makes it the sole retailer to successfully master grocery retail business (52% revenue contribution) in India. It efficiently operates through 220 stores (Q2FY21) with an average ROCE and SSSG of ~20% and ~21% over FY12-20. DMART is categorized as a hybrid supermarket (average store size: 36,000 sq. ft) allowing it to place a higher share of FMCG products (~52% of revenue) driving footfalls with higher margin general merchandising products.

Sustaining Every Day Low Cost (EDLC)/Everyday Low Price (EDLP) strategy is an uphill task for any company as grocery and FMCG products are a low margin business that nibbles capital quickly turning operations unprofitable over the period. Running against the odds DMART has mastered it patiently through gradually expanding stores with the first store in 2002 to just 220 stores in 18 years unlike other players expanding quickly. Despite lower gross margins against other retail players, the company maintains one of the highest EBITDA Margin (8.6% in FY20) in the industry.

To successfully implement the EDLC-EDLP strategy it requires (a) minimization of procurement cost, and (b) efficient supply and operations to achieve low prices on a daily basis. To achieve this company adopted ways such as 1) cluster-based approach, 2) optimal product assortment and strong supplier network, 3) lean cost structures through stringent control on opex, inventory management and payables, 4) majorly owns real estate or operates on long term rental contracts. Through this approach company attained a revenue CAGR of 35% with ~50 bps and ~205 bps expansion in Gross Margins (GMs) and EBITDA Margins respectively over FY12-20. Store expansion, area of operation and sales/sq ft have registered a healthy CAGR of 19%/22%/10% respectively over FY12-20.

Value retailing through EDLC-EDLP a core growth strategy

Most of the supermarket/hypermarket chains provide large discounts occasionally and on few items. This turned out to be unsustainable and loss making proposition. Dmart's business model stands strong versus peers as it is based on the concept of offering value retailing to consumers using the EDLC/EDLP strategy. The strategy promotes - offering lower prices on products on a daily basis rather than special promotions offered occasionally on limited product segments. The company is oriented towards lower-middle, middle, and aspiring upper-middle income consumers for whom getting value for money plays an important role in making the daily shopping decisions. The products stocked are largely composed of essential products forming part of the basic lifestyle rather than discretionary products. This allows to maintain consistency in footfalls throughout the year and are least affected by seasonality or remain temporarily depressed due to macroeconomic conditions or events such as the pandemic. Despite revenue share dominated by food and grocery business (52% of revenue) coupled with thin margins (8.6% EBITDA Margin), DMART provides lowest cost offerings to customers regularly, in turn gaining loyalty, a key factor for driving footfalls. With a higher share of food and grocery in revenue, it has witnessed a higher number of bill cuts per year which has risen at a CAGR of ~25% over FY13-20 to 20.1cr cuts suggesting good new customer traction. Average bill size has also expanded significantly over the same period (due to store addition or due to higher per customer basket value). We expect the average bill size to steadily increase going ahead with an increase in bill cuts at a 13% CAGR over FY20-23E to ~28 cr on account of new store additions and healthy traction at the existing stores.

Exhibit 14: Consistent rise in bill cuts with a steady growth in Average Transaction Size

Source: Company, Axis Securities

Consistent growth in Revenue/sqft and SSSG

DMART has been able to drive improvement in Revenue per square feet consistently since last few years from Rs. 26,388 in FY15 to Rs. 35,647 in FY19 and Rs 32,989 in FY20. Over FY12-19, DMART has registered 20%+ SSSG on an average despite various event based disruptions (demonetization & GST) and economic slowdown. Despite new store additions, SSSG number remained high showing better performance of the old stores. DMART considers stores that have completed 24 months of operations to calculate its LTL performance against other retail players who usually take 12 months of operations for LTL performance. DMART reported SSSG of 10.9% in FY20, this lower SSSG was due to a) new stores maturing earlier than a normal period of ~24 months 2) older stores having attained maximum throughput/store and growing moderately in line with inflation rate. We have factored in -7%/15%/15% SSSG in FY21/22/23E and believe, LTL growth should taper down from an average of ~22% CAGR over FY12-19 to ~15% over FY20-23E and beyond on account of the above reasons.

Exhibit 15: Uptick in Revenue/sqft to Rs~35,000 with consistent average of 20%+ same store growth over FY12-20

Source: Company, Axis Securities

DMART edges over other players in organized grocery retailing in terms providing discounts

We note that DMART's consistency in terms of providing discounts, supports its core principle of "everyday low cost (EDLC)" and "everyday low price (EDLP)". Besides, DMART stores are located in densely populated areas unlike other players where stores are mostly located in malls or away from residential areas, this gives easy access to consumers. Based on a survey of a few essential grocery items across platforms and stores, we could figure out that the number of offering in terms of SKU's and discounts provided on the products in higher by ~5-10% than the other players. Amongst online retailers, JioMart and Big Basket compete strongly by offering products at a similar price or lower than DMART.

Better store economics supported by high operating efficiency and lean cost structures

DMART's core principle of EDLC/EDLP strategy requires strict control on costs in terms of procurement costs, supply and operations, rentals, and employee cost on a daily basis. To provide consumers with the lowest and competitive prices the company needs to ensure it offers sharp/optimal product assortment that is driven by improved understanding and knowledge of local market, consumer's spending patterns, consumer preferences for products thus deciding on new product launches and building in the supply chain efficiencies. Besides, a cluster-based expansion strategy has also led to improvement in operating efficiencies given 1) increased penetration in underserved markets, 2) higher cost efficiency due to economies of scale achieved in the supply chain and inventory management, 3) central procurement system rather than store level procurement, 4) streamlined transportation and distribution system, 5) greater and concentrated brand visibility due to focused implementation of marketing and advertising initiatives.

Exhibit 17: High operating efficiencies and low fixed cost drives higher operating margins

Source: Company, Axis Securities

Owning Stores reduces rental cost critical for profitability improvement

DMART pre-dominantly operates on an ownership model or on a long-term lease arrangement model rather than a rental model. Typically, the company takes a particular property on lease for a period of more than 20-30 years. This allows it to minimize operating costs thus offering long-term competitive advantages like avoiding escalation in rental expenses thus keeping fixed cost low. DMART's rental costs are just 0.4% (negligible) vs average 5-6% of net revenue for other retail players like Future Retail/Spencer Retail. Despite lower gross margins in comparison to other players in the industry, the company clocks higher EBITDA margins than its peers given tight leash on operating costs. Over the last 2-3 years however, company has shown an inclination towards adding stores on the long-term lease basis to accelerate the pace of store expansion. Even then, leased stores will contribute just about 20%-30% of the total stores. DMART's Fixed asset turnover remained consistently higher than peers at ~5x given its lower operating cost due to negligible rental expenses and higher discounts. The company has maintained a higher ROCE (post-tax) at an average of ~13% over FY12-20.

“So, that has been the mindset of the entire organization but now you will see a slight change in attitude; like for example earlier we used to say we will purchase real estate but now we are saying we will also do long-term lease because we know, if we want to open more than 20 stores, only ownership will not work but at the same time nine years lease is a very short period for us. So, we are seeing long-term lease. Also, we are working hard on ensuring that our real estate teams are well bolstered and today we have a much larger team, we are working on a lot of deals. But point taken, however I will say that we are moving from extreme conservatism to controlled aggression.” - (Management meet FY18-19)

Exhibit 18: Lower rental cost against peers

Exhibit 19: Healthy Fixed asset turnover of ~5x

Source: Company, Axis Securities

Lean employee cost structure

DMART's efficiency lies in its ability to attract, hire, train and retain skilled employees and sales personnel. ~80% of the workforce is on contractual basis and ~20% are permanent employee for DMart. The company has been successful in keeping its employee cost under control at just ~4% vs 7% for some of its peers. This strategy to employ majority on contractual basis is owing to the fact that its staff mainly carries out normal day to day jobs such as stocking up of goods, billing, etc. as larger part of the stores cater to grocery items which do not require any major support or assistance. **The company is focused on one simple strategy of value retailing and does not hire any high paying employees to test and try various strategies to complicate business.** Rather it hires hard working and committed employees to carry out daily operations efficiently. DMART's monthly average expense on both contractual and permanent employees is lower by 25% than peers like Future Retail's Big Bazaar.

Exhibit 20: Average Employee expenses lower by ~25% compared to its nearest competitor

Source: Company, Axis Securities

Investment on building strong internal system

DMART's prowess lies more in controlling cost structures rather than revenues, as the segment of food grocery would drive footfalls for any retailer but allows to earn very thin margins. Therefore, DMART has invested more in IT systems and supply chains to streamline the process and incur minimal promotional activities to attract consumers. The company has benefitted from investing early into IT systems which are built with a wide range of data management tools specific to its business and which supports key aspects of the business, including procurement, sales, and inventory control on a daily basis.

Strong supplier network and efficient supply chain management

DMart's operations are largely based on low margin-high volumes, as it consistently provides discounts to attract consumers. Bulk purchase from distributors and suppliers allows DMART to get significant discounts on purchases. Also DMART pays its channel partners promptly and on time thus not needing them to extend credit lines thereby managing working capital needs. DMART's Payable days (9 days) are lowest when compared to both domestic and global peers. The company has expanded its footprint using a cluster-based approach and has strengthened its presence in existing regions by opening new stores within a radius of a few kilometers of existing stores and distribution centers. We believe distribution centers have provided with the benefits of 1) consolidating major administrative functions from individual stores to central distribution centers, 2) Better inventory management with reduced stock shortages in stores due to the use of stock replenishment systems, 3) reduced costs and time by providing centralized procurement, 4) better margins due to efficient supply chain management.

Exhibit 21: Lowest payable days among peers, domestically and globally

Source: Company, Axis Securities

Better cost structure and margins than peers

DMART incurs 85% of the revenue on COGS and it has been maintaining Gross Margins (GMs) in a tight band of 14-15% over the past decade. Since the company is very disciplined in executing its strategy of EDLC/EDLP, it passes on excess margins if any to consumers, and we therefore expect similar levels of GMs to be maintained going forward unless the company invests heavily on private labels or its product mix witnesses a drastic shift, which we believe is unlikely to take place as a large portion of the company's revenue is derived from food & grocery and non-food FMCG, both of which offer lower GMs, while DMART's presence in private labels having higher GMs remains very low as against peers having relatively higher presence. Despite low GMs, DMART's continued efforts towards controlling operational costs has translated into higher EBITDA Margins that reported a marked improvement by ~200 bps from FY12 to 8.6% in FY20. Cost control measures undertaken are 1) preference for contractual employees (80%) of total employees vs permanent employees which are only 20%. This results in keeping employee costs under check at just 4% of net revenues, 2) negligible rental costs as majority of the stores are company-owned, 3) no major expenditure on advertisement and promotion like other peers 4) controlled other operating expenses.

Exhibit 22: Superior Operating & Profitability Metrics versus peers highlights execution prowess

Source: Company, Axis Securities

Strong focus on product assortment

DMART's deep knowledge of the clusters and regions aids in product assortment in each store considering local demands and preferences and it believes in keeping a very sharp assortment and does not offer much of a choice to its consumers to decide about the options available. The company largely focused on middle-class consumers for daily house hold needs by purveying providing groceries (52% of the revenue), non-food FMCG (20% of revenue) and general merchandise & apparel (28% of revenue) at very competitive prices against other retail players and the local players where the stores are located. DMART's tight and relatively concise assortment has helped the company to arrest losses from wastage. In dairy for instance, the company will only offer brands known to the consumers such as Amul, Mother Dairy with a limited number of SKU's against a higher number of SKUs offered by competitors. Selling a few SKU's in large quantities enables bulk buying at favorable prices which the company can pass on to the consumers. Limited number of SKU's do not confuse consumers in choice-making and keep the inventory churns high. With the targeted purchase of daily use items and known brands offering limited SKU's has resulted in higher bill cuts (CAGR ~21% over FY12-20) with a steady rise in average transaction size.

Exhibit 23: Grocery accounts for highest share of revenue which drives footfall, witnessed from higher bill cuts posted at 20cr in FY20

Source: Company, Axis Securities

Under penetrated market opens gates for store expansion

DMART opened its first store in 2002 and spent the next 8 years to start its first 10 stores. It had 110 stores with a retail area of 3.30 mn sq. ft which got doubled to 220 stores with a retail area of 8.2 mn sq.ft in Q2FY21. Initially, store expansion has been slow in order to grab the business model inside out and while expanding, management carefully considers the factors like location, population density, customer traffic and accessibility estimated spending power of the population and payback period, this gradual expansion has benefitted the company which is evident from the fact that they have not witnessed a single store closure to date. In H1FY21 however, they closed 2 stores and converted them into an e-commerce fulfillment center to cater to the growing demand for online shopping in the lockdown phase when people's movement remained restricted and limited. However, management has guided to remain nimble-footed to emerge stronger in the post COVID world where situations remain very dynamic.

Cluster based store expansions to continue

DMART has deepened store network in southern and western India and is gradually expanding network in other parts of India pursuant to cluster-focused expansion strategy. This approach allows the company to create store clusters within a region and help better understand local needs and preferences and tailor its offerings according to the demand. Such clusters aid in increased penetration in new markets with higher cost efficiency due to economies of scale achieved through supply chain and inventory management with concentrated brand visibility due to focused implementation of marketing and advertising initiatives. DMART as on FY20 has 36 distribution centres and 7 packing centres which supports its retail network effectively.

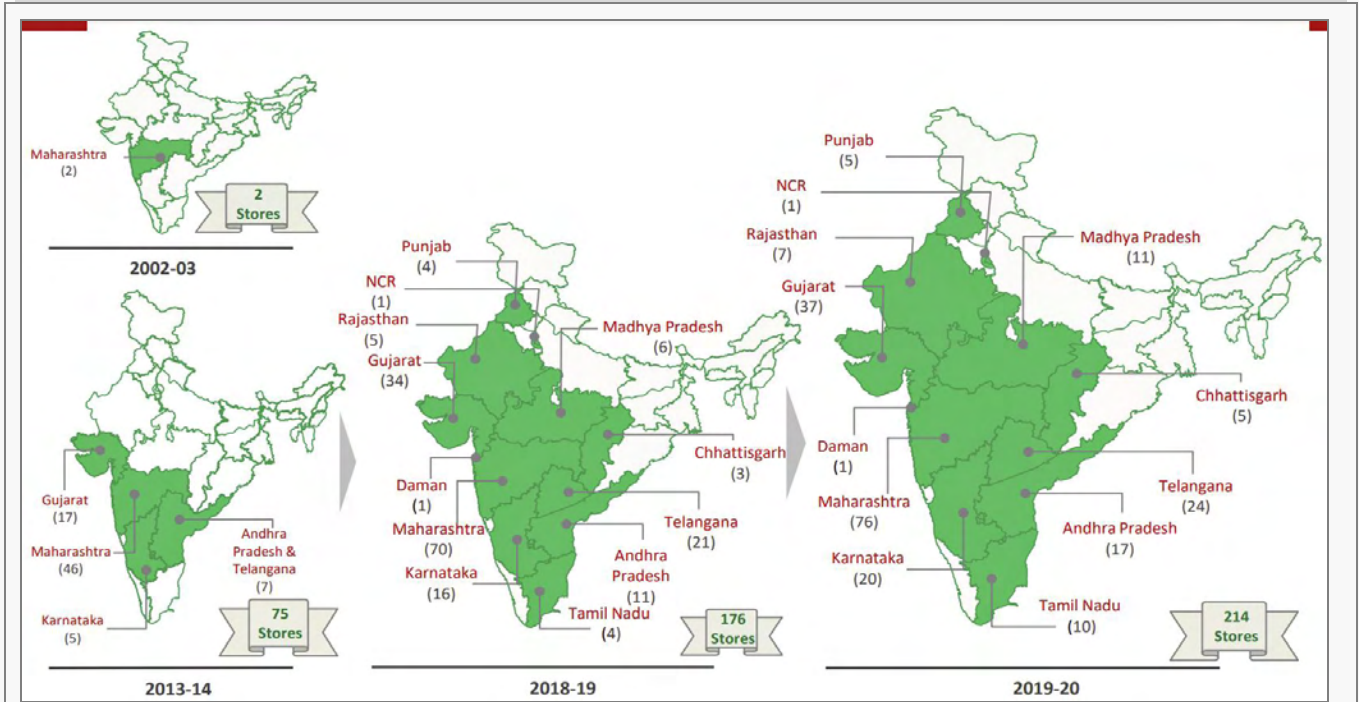

“Given an option, we would like to open stores in states that we already operate in. A lot of people who have heard me before would know this, but for the benefit of people who are hearing it for the first time, our principle has been that given the amount of money to be invested, we would like to invest in states and cities that we already exist in primarily because it gives you better leverage as far as operating leverage is concerned. Your cost structures are far better utilized if you are investing in the same cities and being in the same city you also know the consumer better, so your ability to earn topline and gross margins are significantly better than going to a newer market. That does not mean we do not go to new markets, but it is typically 80-20 or 70-30 principle.”- (Management: Analyst Meet FY19-20)

Exhibit 24: DMart follows cluster based approach for store expansion with higher concentration (~87%) of stores in West and South and ~13% in central region

Exhibit 25: DMart conservative approach of store expansion now covers 12 states only with higher density in western region

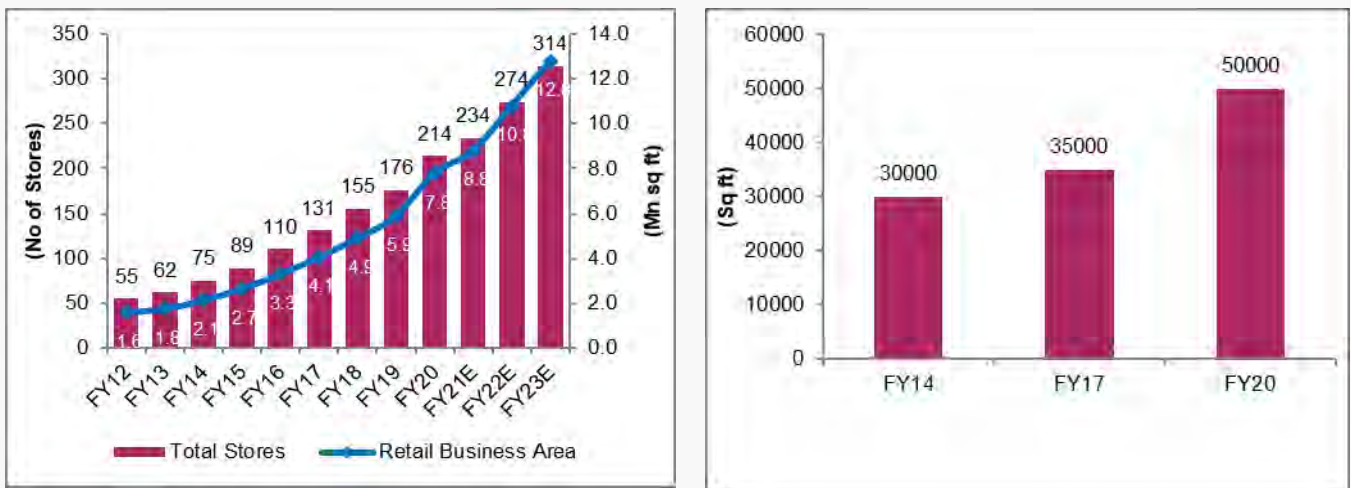

Source: Company, Axis Securities

Pace of expansion to accelerate with focus on large format stores

DMART has grown to 220 stores with a retail business area of 8.2 million sq. ft. spread across Maharashtra (76 stores), Gujarat (37), Telangana (24), Karnataka (20), Andhra Pradesh (17), Madhya Pradesh (11), Tamil Nadu (10), Rajasthan (7), Chhattisgarh (5), Punjab (5), Daman (1), and NCR (1). In FY20, DMART added the highest number of stores with a count of 38 stores and the highest in terms of square footage to an absolute value of ~1.9million sq.ft of retail space. This, effectively means the company is focused on opening larger format stores from last two years given 1) maturity and acceptability of the brand is high that stores are attaining maturity much earlier than anticipated i.e reaching the throughput/store of ~35,000/ revenue sq ft in lesser time thus flattening the CAGR growth to a single digit, 2) Large format stores provide a larger display area for high margin products, 3) larger store from a CAPEX point of view requires lesser incremental CAPEX, making more business sense to open larger stores. We expect, DMART to add on an average ~40 stores in FY22-23E barring FY21E taking the total store count to ~315 (~13mn sqft) by FY23E.

Exhibit 26: ex- FY21E impacted by COVID, DMart is expected to add ~40 stores annually in FY22/23E majorly in the large format stores, count expected to reach 310+ stores and retail business area of ~13 mn sq ft.

Source: Company, Axis Securities

Dmart ready next leg of growth

Dmart is addressing e-retail business (DMart Ready) through its subsidiary, Avenue E-Commerce Ltd through which it offers customers the choice to self pick-up their online orders from any of the designated pickup points or get them delivered at their residence (for a nominal delivery charge). In Q2FY21 DMART Ready catered to 98 pin codes in Mumbai, and set up a total of ~225 outlets with an average store size of 200-300sq ft. In FY20, DMART registered revenue of Rs. 354cr with an EBITDA Loss of Rs 41 cr.

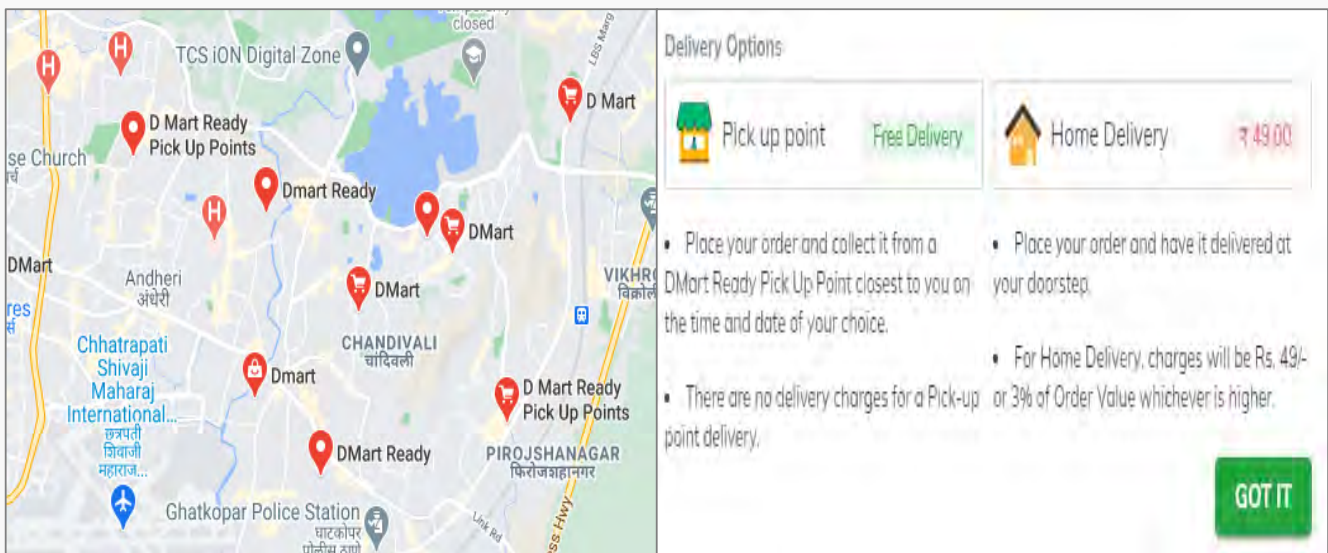

DMart to address 2 main criteria with its DMART Ready model: a) **to provide its consumers with agility and convenience on a day to day purchase basis,** 2) **Widen its reach in regions where it doesn't have presence through Brick & Mortar format owing to high real estate and other cost.** Unlike other online players, DMART wants to expand its e-commerce business gradually analysing every aspect of the online business model so as to get a deeper understanding of the store economics as, in grocery e-retailing attaining break even is difficult given 1) higher revenues from lower margins of products such as grocery and other FMCG products, 2) higher cost of technology and administration, 3) delivery expenses.

“We are not trying to be so mild by saying that e-commerce would not do anything but if you tell me that do I need to put serious money right now and build e-commerce network, we will not do that. We will observe what is going on. We are reasonably agile and we can accelerate if we want to, only if we want to. We are not speaking about our pessimism around e-commerce because of our inability to build e-commerce. I think the fact that we expanded in 200 cities within a span of 15 days or one month and it was from scratch. This indicates that we can do it, we do not want to do it for some other reasons and part of which I explained where brick and mortar and e-commerce running from the same space is not the best way to do it. But if we see that e-commerce is the preferred channel for shoppers and shoppers are changing, we will also do it. But we are again saying that as of today the opportunity is in large towns only for a model like us. Do keep in mind one point that we are not talking about marketplace model. That is a model that we do not want to get into. This is pure grocery e-commerce.” (Management: Analyst Meet FY18-19).

Store ramp up and improvement in store economics expected going forward

The company intends to mimic similar model as a Dmart store in case of Dmart Ready its online platform and ensure that the same proposition of EDLP/EDLC is delivered through this model as well. The company is better placed if compared to other players in terms of attaining break even going ahead as 1) most of the DMART Ready stores are in close proximity to the existing DMART stores which reduces the distribution cost for the company compared to other players, 2) lately company has been working on increasing its SKU's and adding general merchandise and apparel items like plastic wares, kitchen utensils, home furnishing, kitchen appliances etc. on its website and at its Ready stores which aid margins and, 3) Online delivery charge of Rs. 49 or 3% of order value whichever is higher is charged to the consumer.

Exhibit 27 : DMart ready stores located close to DMart stores, thus reduces distribution cost

The screenshot shows a map of Mumbai with several DMart and DMart Ready locations marked with red pins. A delivery options pop-up is overlaid on the right side of the map. The pop-up has a title 'Delivery Options' and two main options: 'Pick up point' with a house icon and 'Free Delivery' text, and 'Home Delivery' with a house icon and '₹ 49.00' text. Below these options, there are three bullet points explaining the delivery charges and a green 'GOT IT' button at the bottom right.

- Place your order and collect it from a DMart Ready Pick Up Point closest to you on the time and date of your choice.
- Place your order and have it delivered at your doorstep.
- There are no delivery charges for a Pick-up point delivery.
- For Home Delivery, charges will be Rs. 49/- or 3% of Order Value whichever is higher.

Source: Company, Axis Securities

Store economics of DMART Ready

DMART is testing the model and would expand in other cities upon achieving viable store economics. We believe as the company's existing store matures, further addition of new stores going forward could increase revenues and reduce the cost of operation as most of the stores are in close vicinity of the existing DMART stores thus reducing distribution cost. The company also levies a delivery charge that would cover the transportation charges thus aiding in achieving breakeven quickly. We note that EBITDA Losses for DMART Ready have reduced to ~12% of the revenue in FY20 from ~28% and 86% in FY19 & FY18 respectively when stores increased to ~220 in FY20 from 58 stores in FY18, this implies increase in volume and revenue would bring economies of scale going ahead.

Exhibit 28: With older stores maturing and addition of new stores it would increase the revenue and improve store economics, thus aids to achieve breakeven quickly in next 3-4 years

How does recent funding and M&A activity in F&G Retail impact Dmart ?

Large opportunity but hardly any winner

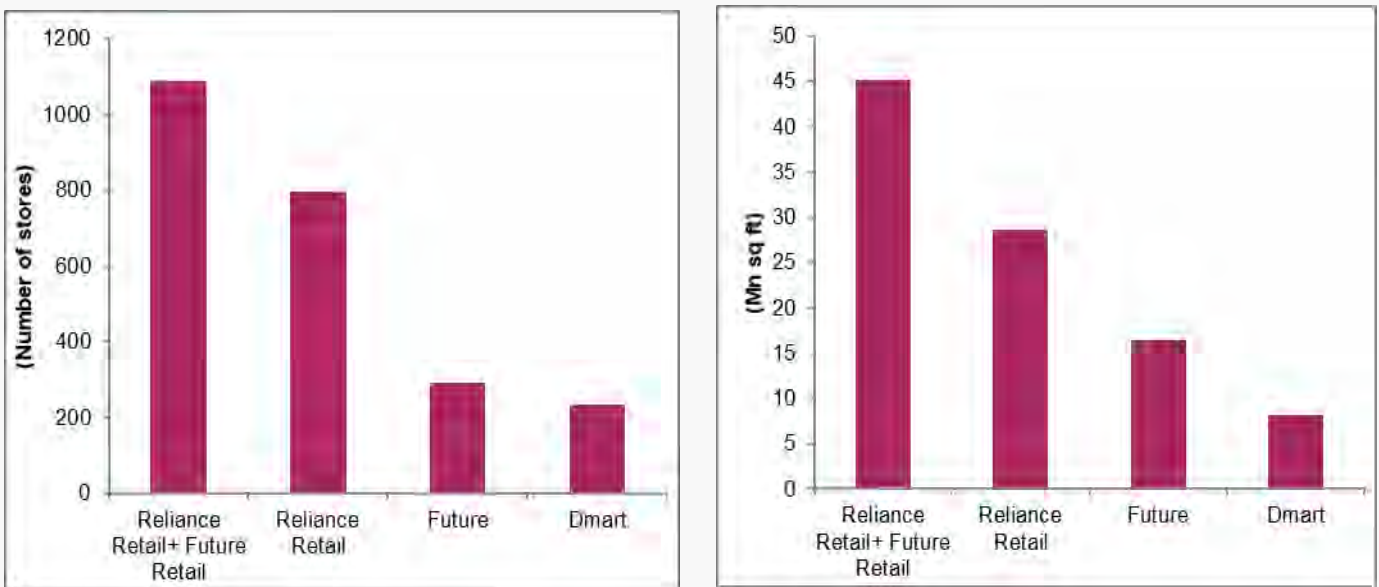

Reliance Industries (RIL) with the largest retail network of ~12,000 stores announced the acquisition of retail assets of Future Retail Limited at ~Rs 24,000 crores which includes 290 large format stores and 990 small stores, which has implications on the industry as it gives RIL wings to grab market share and expand its operations at a fairly quick pace. With this acquisition DMART will become 2nd largest player in terms of revenue and this could impact the company's bargaining power or the company would need to spend more on promotional activities to attract consumers which is minimal at present, thus impacting the margins of the company. This led to ~3% correction in DMART's stock price post the deal announcement in August 2020. Despite the large opportunity in the Indian retail industry with organized retail being just 11-13% of the total industry, hardly any player barring DMart has been able to survive and generate consistent returns due to high operational cost and wafer-thin margins. Therefore, growth in the industry will be captured by large-scale and efficient players that are focused on delivering value propositions to consumers in respect of better prices and convenience. Given the larger size of the industry, DMart could benefit from the shift from unorganized to organized retail, a trend increasingly noticed in metros and tier-1 cities over the past few years.

Exhibit 29: Post acquisition reliance will become larger player in both fashion & lifestyle and grocery retail market

Source: Company, Axis Securities

Exhibit 30: Post acquisition Reliance retail unit will exceed Dmart in terms of number of stores and surface area

Source: Company, Axis Securities

Huge unpenetrated market allows co-existence of 4-5 big players

Organized retailing accounted for ~11% of the total retail industry and food and grocery accounts for ~19% share in value terms (Rs 1.19 trn of Rs 6.3 trn organized retail market) but forms just ~3.6% of the total organised segment and remains the most under-penetrated segment, with unorganized retailers (such as standalone Kirana stores, cart vendors and wet markets) forming the remaining market. The low organized retail penetration (ORP) possesses a large opportunity for organized retail players with better supply chain and economies of scale. With retail market consolidating post pandemic as small players face liquidity issues and adequate capital to run the operations it creates opportunities for players like DMart and Reliance to grab market share and create higher barriers to entry. Post takeover (Reliance+Future Retail) reliance will become the larger player but we believe it will not adversely impact DMART's operations in terms of low procurement cost. Beside DMART has a proven track record in terms of Revenue and Profitability (CAGR of 37%/47% over FY12-20) and expect similar trend to continue given 1) Large opportunity in grocery retail with just ~4% of organised penetration in total of Rs 1.2 trn food and grocery market, 2) Strong execution capability with proven track record, 3) Steady Gross Margins at ~15% and consistently low operational expenditure at ~7% over the past few years, thus ensuring steady EBITDA margins performance, 4) Well thought out investments in real estate considering areas of high population density, higher per capita income profiles etc. (no store closure till now), 5) streamlined transportation and distribution system.

To your other question about competition, we unnecessarily worry and drum beat about competition. Market size is very large. In fact, why do we have to worry? My message even to my competitor is the same thing, "Why worry about each other?" The Pie is big and the pie itself is growing so much. So, there is nothing to worry about competition. If there is anything to worry about, it is about us. We should not get complacent; we should be constantly excited because this business is very tough and very boring. So, how you maintain the excitement and the focus in the business is the key. (Management: Analyst Meet FY18-19.)

Indian Retail Industry overview

What retail industry accounts for?

Indian retail industry accounts for over 25% of India's GDP and ~50% of the private consumption (~57% of the GDP) and around ~8% of the employment. It has emerged as one of the most fast-paced industries due to the entry of several new players. As per CRISIL Research Retail Industry is expected to grow 11.5-12.5% CAGR on account of an increase in economic activity with inflation being low to moderate range. Pent-up demand along with a better economic outlook will boost consumer sentiment and drive up discretionary spending. In FY19 the western region consisting ~20% of the total population accounted for ~28% of the overall retail consumption in the country. Similar is the case with southern region, which comprises five states housing ~20% of the country's population; it accounts for ~29% of the overall retail consumption. The northern region has lower retail consumption, which accounts for 25% of the overall market.

Exhibit 33: Total retail industry expected to post CAGR of ~12% over CY20-24E to ~Rs 104 trn

Source: Company QIP Report, Axis Securities

Organised retail pie getting larger:

Organized retailing accounted for ~11% in CY19 of the total retail industry and registered a CAGR of ~30% between FY06-11. However, this segment grew at a relatively slower pace of 16% CAGR from FY13-17 on account of tepid economic growth and declining disposable income from FY12-15. It gained some traction in FY2016 with the segment expanding 17% YoY. However, in FY2017, demonetization impacted the industry thus putting brakes on consumer spending. However, from FY18 the industry growth once again witnessed traction thanks to roll-out of GST that supported organized retailers, as the cost of doing business increased for unorganized retailers and organized retail grew at a rate of ~20% YoY in FY18 followed by ~21% YoY in FY2019 with B&M retailers registering a growth of ~18% YoY. Further, with the economy gaining momentum post COVID and improved consumer spending, organized retailers could clock ~19-21% CAGR over FY19-24E, reaching Rs ~16 trn with a jump of 400bps in share to ~15% of the total retail industry. The organized retail market is expected to grow at ~1.6x the overall retail market given traction of people towards organised retail due to larger offerings on discounted price in comparison to local kiranas.

Exhibit 34: Total retail industry expected to post CAGR of ~12% over CY20-24E to ~Rs 104 trn

Source: Company QIP Report, Axis Securities

Organised food and grocery, footwear and consumer durable retail to be the fastest growing segments

Food and Grocery accounts for ~19% share in value terms (Rs 1.19 trn of Rs 6.3 trn organized retail market) but forms just ~3.6% and remains the most under-penetrated segment, with unorganized retailers (such as standalone Kirana stores, cart vendors and wet markets) forming the remaining market. Unorganized retailers have lower fixed cost and are either self-owned or self-managed and compete fiercely with organized retailers by offering customers the convenience of its locational proximity, home delivery and credit being the biggest advantages. The low organized retail penetration (ORP) possesses a large opportunity for organized retail players however, managing the supply chain along with achieving economies of scale remains a challenge due to the perishable nature of products. CRISIL Research estimates the organized food and grocery segment to have grown ~26% YoY in FY2018 followed by ~29% YoY growth in FY2019. Going forward, the organized F&G segment is expected to witness healthy growth aided by new store additions from retailers and consistent growth in like-to-like (LTL) sales on account of increased footfalls due to shift in preference towards organised retail.

Exhibit 35: Food and Grocery accounts for largest share with least penetration compared to other segments

Organised Retail		FY19			FY22P

Classification by store size and product category assortment

Hypermarkets: Largest by size, with average store size ranging from 30,000 to 60,000 sq. ft. The focus category assortment can be defined as follows: F&G is 30-35%, Non Food (FMCG) being 15-20% and Others is 45-55%. These hypermarkets include the biggest retailers including EasyDay, Big Bazaar and Spencer's and they differentiate themselves based on wide variety of products and the shopping experience delivered.

Hybrid Supermarkets: These are smaller than hypermarkets but larger than a typical supermarket; average store size is ~20,000 to 30,000 sq. ft. The focus category assortment can be defined as follows: F&G at 45-50%, NonFood (FMCG) at 20-25% and Others at 25-35%. Key retailers in this segment include D'Mart and Q'Mart. They focus on competitive pricing due to scale led efficiencies achieved.

Supermarkets: Their store size ranges from 3,000 to 6,000 sq. ft. and the category assortment is dominated by the F&G segment. The focus category mix can be defined as follows: F&G is at 60-65%, Non Food (FMCG) is 20-25% and Others stands at 10-20%. Key retailers operating in this format include EasyDay, Food Bazaar and Spencer's. These are typically situated in residential areas to provide a convenient outlet for local consumers.

Modern Convenience Stores: These are the smallest formats in organised B&M retail, with an average store size from 1,500 to 2,500 sq. ft. Similar to supermarkets; they have a greater focus on fast moving products, especially in line with specific neighborhood demands. The focus category assortment can be defined as follows: Food & Grocery (F&G) is 65-70%, Non Food FMCG at 20-25% and Others forming 5-15%.

Exhibit 36: Different formats of stores and key players in the Indian retail industry

Type of Format	Average Area of Store (sqft)	Typical products sold	Primary location	Key players/brands
Convenience/ Neighborhood Stores	1000-2000	Grocery	Residential	Local Players
Supermarkets	2000-10000	Food & Grocery	Residential Areas, Malls	More, Food Bazaar, Reliance Fresh
Hypermarkets	75000-150000	Food & Grocery, Apparel, Electronics, Household items & furniture	Malls	Big Bazar, Dmart, Spencer' Hyper, Reliance Smart
Department stores	20000-50000	Clothing, home décor, furniture, appliances, cosmetics	Malls	Pantaloons, Lifestyle, Shoppers Stop, Central

E-RETAIL INDUSTRY IN INDIA

E-Commerce has been a focus area for the industry in the past decade with large global players entering the market to capture under-penetrated Indian retail space. COVID-19 pandemic has further accelerated growth of this channel. Online grocery is still a relatively under-penetrated segment within E-retail, and has caught the attention of all major e-retailers. E-Retail has seen significant investment over the past two years and is expected to be the fastest-growing segment. Apart from this, the continued focus of major e-retailers on existing business segments such as electronics, apparel, and fashion will drive growth. With the omnichannel strategy gaining prominence, the e-retail industry seems set to add incremental growth to the overall organized retailing sector, rather than pose competition to existing retailers. Indian e-commerce sector is set to clock 28-33% CAGR from CY19-22E. With recent policy changes to create a level playing field for all sellers, discounts offered by e-retailer are likely to come down which could result in slower growth in the near term until e-retailers rework their strategies.

Exhibit 37: With omni-channel strategy gaining prominence, the e-retail industry tends to grow fastest in overall organized retailing sector

Financial Commentary

Strong revenues growth, expected to post CAGR of ~23% over FY20-23E

DMART posted a healthy revenue CAGR of 35% over the last decade (FY12-20) largely driven by store expansion and strong same-store growth. Its strong focus on EDLP/EDLC strategy has resulted in higher bill cuts at 20.1cr in FY20, a 21.3% CAGR. We do think the average bill size could steadily rise given increase in consumption of discretionary items also with rise in income. This, coupled with the addition of ~100 stores over FY20-23E is expected to drive revenue growth by ~23% CAGR over FY20-23E to Rs. 45,000 cr in FY23E. DMART will continue to expand ~70% of the stores in the existing clusters and the rest 30% new store additions will be in new clusters. In terms of cluster contribution, Maharashtra and Gujarat account for the majority share of stores at ~53% to a total of 113 stores, followed by Telangana and Karnataka at ~20% with 44 stores.

Exhibit 38: Strong 23% CAGR in revenues expected with ~100 store additions of over FY20-23E

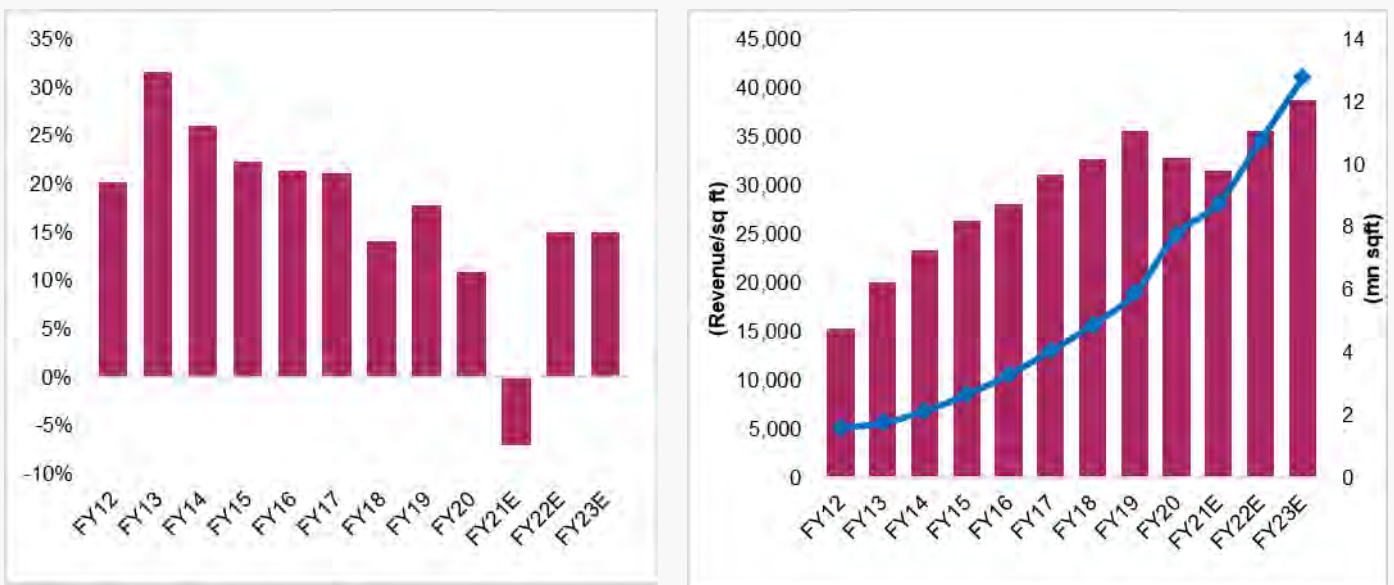

Source: Company, Axis Securities

SSSG growth to moderate over FY22E and beyond

We expect Like – To – Like (LTL) growth to moderate at ~15% over FY22-23E barring FY21E at -7% vs ~21% CAGR during FY12-20 as existing stores attain maturity in terms of footfalls and LTL growth will largely be in line with inflation growth of ~6%.

Exhibit 39: Same store sales growth to moderate at ~15% with steady rise in revenue/sq.ft. over FY20-23E

Source: Company, Axis Securities

Margin profiles might improve marginally with EBITDA expected to register CAGR of ~24% over FY20-23E

FY21, owing to the pandemic there has been a sharp impact on sales of non-discretionary products that earn higher margins than low margin earning food & grocery segment. As a result, for FY21E, we expect a drawdown on Gross Margins to the extent of ~105 bps to 14.1%. However, over FY22-23E receding fears of the COVID-19 virus, availability of vaccine, further relaxations of lockdown restriction would lead to higher movement of people (casually) as life limps back to normalcy we expect the business of brick & mortar stores too also an improvement where footfalls is one of the key growth enablers. Over FY22-23E we believe, Gross Margin are likely to sustain at similar levels with slight improvement aided by higher sales of discretionary (non-FMCG and Apparel) items. We expect DMART to report Gross & EBITDA Margin of ~14.1%/7.5% in FY21E while in FY22E and FY23E, EBITDA Margin would get back to 8.6% & 8.9% with an EBITDA CAGR of ~24% over FY20-23E. The expectation of a strong EBITDA growth is on the back of 1) strong revenue growth driven by new store addition and high SSSG, 2) Strong operating leverage owing to scale benefits with the slight scope of improvement on account of further streamlining of cost such as owing fleet for transportation rather hiring on lease etc.

Exhibit 40: Gross/EBITDA Margin growth to continue ex- FY21E, expected EBITDA CAGR ~24% over FY20-23E

Source: Company, Axis Securities

PAT to post ~25% CAGR over FY20-23E

DMART has cemented a strong position in the western and southern part of the country with its strong execution capability and cluster-based expansion. This has led the company to report robust growth in earnings over the years. The company registered a staggering PAT CAGR of ~47% over FY11-20 with the growth momentum continuing beyond FY21 (FY21 to be a one off impacted by COVID pandemic). However, measured call on store expansion owing to the pandemic and competitive forces we expect DMART to deliver a PAT CAGR of ~25% over FY20-23E, given its (a) continued focus on EDLP/EDLC strategy with cluster-based expansion in the region, (b) continuing store expansion with a major focus in the existing region (~70% of the expansion) and expanding into new clusters (30% of the total store expansion), (c) Experienced management with an eagle eye on cost management and (d) strong proven execution track record on profitable business operations.

Exhibit 41: PAT to post CAGR of ~25% over FY 20-23E

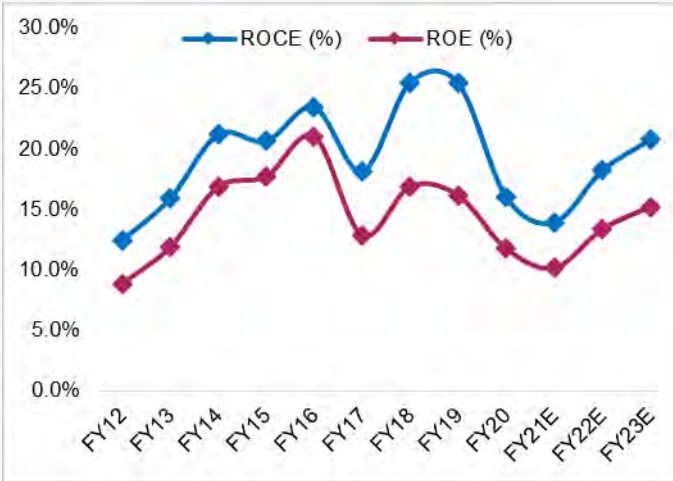

Source: Company, Axis Securities

Superior Return Ratios (RoE/RoCE), Asset Turns despite asset heavy model

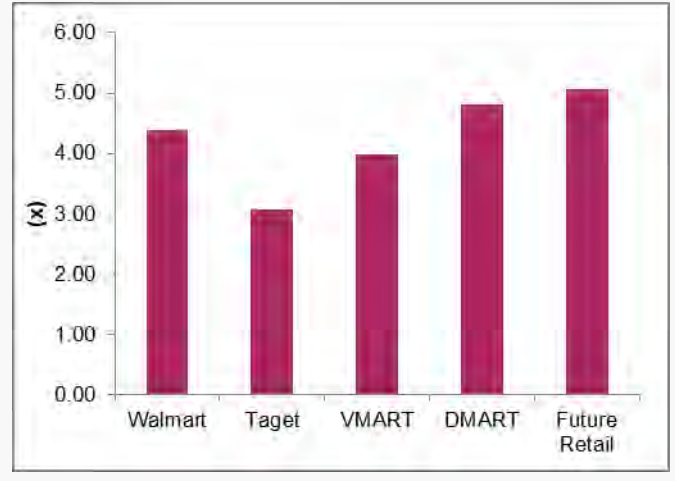

DMART operates on a model (asset-heavy) where where ~90% of the stores are owned by the company and the rest are operated on long term lease of over 9 years, thus enabling it to focus on improving productivity without worrying about rental expenditure and escalation of the same as some segments take a relatively longer time to pick up and attain breakeven. Despite an asset-heavy structure, the company has been able to sustain a higher asset turn of ~5x led by EDLC/EDLP strategy and amongst lowest operational cost vs peers. Despite having a lower GM/EBITDA Margin and higher capital employed the company has maintained an average ROCE and ROE of ~20% and ~15% over FY12-20 on account of better asset turn. Owing to its focus on value retailing DMART enjoys industry-leading asset turnover of ~4x vs 3x the industry average thus ensuring maintaining superior ROE/ROCE in the industry..

Exhibit 42: Strong Return Ratios over the decade and expected to continue over 20-23E

Source: Company, Axis Securities

Exhibit 43: Industry leading asset turnover with ~5.0x ahead of global peers and domestically

Healthy cash flows generation, FCF turning positive post FY23E

A well contained and capital-efficient operations have generated healthy cash flows for the company over the years. DMART's average CAPEX over FY12-20 remained at ~Rs 720 cr with the highest Capex in FY20 at Rs.~1700cr and highest store addition at 38 stores. Even though the company is generating positive operating cash flows, FCF remains negative for the company due to significant store expansion largely funded through debt pre IPO. In tandem with the same rate of store expansion and the latest QIP undertaken by the company of Rs 4000 cr, we expect CAPEX intensity to sustain, going forward with positive FCF post FY23E. Due to COVID-19, the company has reduced the number of store addition and we expect it to maintain a similar pace of store expansion from FY22E and add ~100 new stores (additional ~5mn sqft) by FY23E. We note that DMART's CFO registered a CAGR of ~45% over FY12-20 to Rs. 1,280cr in FY20 and believe the company to maintain consistency in generating cash flows at a CAGR of ~24% in CFO over FY20-23E.

Exhibit 44: Healthy Cash Flow generation with high CAPEX undertake over the years

Source: Company, Axis Securities

Working Capital to remain stable

Working capital management is a critical component for grocery retail companies due to frequent turnover, procurement, and optimum stock level maintenance. In the past, many players have failed to sustain business operations due to poor inventory management and credit default with mere focus on rapid expansion and inability to manage inventory levels, thus leading to dis-satisfied customers, in turn, impacting business. DMART's strength has been maintaining a stable working capital. This has been displayed in its record over the past years as the company is well equipped with technology to aid in better inventory management on a center as well as store level. Owing to COVID-19 impact and ensuing disruption caused to supply chains, DMART witnessed inventory build-up for the apparel segment due to lower sales of discretionary items. This would lead to marginally higher inventory in FY21E of 30 days vs an average of 29 days of inventory in the past. However, on the Payables front, days are much lower at an average of 9 days (have trended down further in recent years) as the company prefers to get higher discounts from its suppliers with prompt payments another guiding principal of DMART in conducting business. We forecast stable working capital days going forward on account of better inventory management with timely payment of payables as this reaps better discounts for the company which in turn is passed on to its consumers.

Exhibit 45: Working Capital Days to sustain at similar levels going ahead

Source: Company, Axis Securities

Valuations and Outlook

DMART has posted Revenue/EBITDA/PAT CAGR of 35%/40%/47% in FY12-20 way ahead of peers with a steady rise in store counts driven by its cluster based approach to expansion of business operations. We estimate healthy Revenue/EBITDA/PAT CAGR of ~23%/24%/25% over the next three years (FY20-23E) owing to 1) store expansion plans (estimated ~100 stores in next three years) 2) improving consumption trends and 3) consumers preferring modern retail formats which also compliment a family outing. **We initiate coverage on the stock with a BUY rating and Target Price of Rs 3100, our price target is based on a forward EV/EBITDA multiple of 48x, which is supported by earnings CAGR of 25% over FY20-23E.** We are assigning this multiple to DMART given its strong execution capability and track record with sufficiently large headroom for expansion as grocery segment remains the least penetrated segment with a share of just ~3.6% of the total organised market.

About The Company

Avenue Supermarts Limited is an India-based company, which owns and operates DMart stores. DMart is a supermarket chain that offers customers a range of home and personal products under one roof. Each DMart store stocks home utility products, including food, toiletries, beauty products, garments, kitchenware, bed and bath linen, home appliances and others. The Company offers its products under various categories, such as bed and bath, dairy and frozen foods, fruits and vegetables, crockery, toys and games, kids apparel, ladies garments, apparel for men, home and personal care, daily essentials, grocery and staples, and own DMart brands. DMart has presence in locations across Maharashtra, Gujarat, Andhra Pradesh, Madhya Pradesh, Karnataka, Telangana and Chhattisgarh with over 11 stores. The Company has multiple stores in cities, such as Mumbai, Ahmedabad, Baroda, Bengaluru, Hyderabad, Pune and Surat.

Segmental Operations

- **Foods:** This category includes staples, groceries, snacks & processed foods, dairy & frozen products, beverages and confectionery. In Fiscals 2017, 2018 and 2019 and and 2020, this category constituted 53.3%, 51.6%, 51.2% and 51.0%, respectively in revenues.
- **Non-Foods (FMCG):** This category includes home care products, personal care and toiletries and other over the counter products. In Fiscals 2017, 2018 and 2019 and and FY20, this category constituted 19.9%, 20.0%, 20.5% and 20.0%, respectively in revenues.
- **General Merchandise & Apparel:** This category includes bed & bath products, toys & games, home appliances, crockery, utensils, plastic goods, garments and footwear. In Fiscals 2017, 2018 and 2019 and FY20 this category constituted 26.8%, 28.4%, 28.3% and 29.0%, respectively in revenues.

Key Risks

- **Inability to pursue its value retailing strategy:** Any strategic shift from value retailing or inability to offer daily low prices pursuant to EDLC/EDLP pricing strategy, the company is at a risk of losing its distinct advantage and a substantial portion of customers, which will adversely affect the business, financial condition and results of operations.
- **Viable Real Estate:** Availability of commercially viable real estate properties at suitable locations for the new stores, timely execution of sale deeds/leave and license registrations and getting regulatory approvals for these properties is critical for maintaining its low cost competitive position in the industry.
- **Slower than expected store expansion:** In the past DMART has been able to aggressively open stores across locations where it had the right to win. However, any slowdown in store expansion due to lack of necessary regulatory approvals or other factors could impact its SSSG thus affecting the business performance.
- **Heating up competition in e-commerce:** Post the outbreak of COVID pandemic, there has been a shift in shopping habits to online channels. Thus far DMART has been slow in ramping up its presence on the online space through its DMART Ready App which currently is loss making. Increase in losses or delay in ramping up e-commerce presence compared to other online marketplaces like Amazon Pantry, Flipkart Supermart, JioMart, Bigbasket etc could dent its overall performance.
- **Competitive threat from JioMart: Acquisition of Future Retail by Reliance Retail** the retail arm of Reliance Industries (RIL) makes it the largest player in F&G Retail with DMART being the 2nd largest player in terms of revenue. Given Reliance's deep pockets and aggression in tapping the huge market opportunity could result in intensifying competition in F&G space to get consumer attention by offering lowest values and thus leading to rising footfalls for respective companies. This could possibly reduce DMART's bargaining power and hence need to spend on promotional activities thereby impacting its profitability.
